❑ EVALUATION OF BUILDING RESILIENCE UNDER EARTHQUAKE INPUT USING SINGLE, DOUBLE AND MULTIPLE IMPULSES Izuru Takewaki, 2017-09-07 This eBook is the third in a series of books on the critical earthquake response of elastic or elastic-plastic structures under near-fault or long-duration ground motions, and includes four original research papers which were published in the specialty section Earthquake Engineering in 'Frontiers in Built Environment'. Several extensions of the first eBook and the second eBook are included here. The first article is on the earthquake resilience of residential houses after repeated ground motions with high intensity. The 2016 Kumamoto earthquake brought a significant impact on the earthquake resilience of residential houses under repeated ground motions with high intensity in a few days. The necessary strength upgrade withstanding two repeated high-intensity ground motions was found to be 1.5. The second article is concerned with the smart enhancement of earthquake resilience of building structures under both near-fault and long-duration ground motions. A hybrid system of base-isolation and building connection control was proposed and its earthquake resilience to near-fault and long-duration ground motions was evaluated by a double impulse and a multiple impulse. It was demonstrated that the base-isolation is effective for near-fault ground motions and the building connection system using passive dampers is effective for long-duration ground motions. The third article is related to the robustness evaluation of elastic-plastic base-isolated high-rise buildings under resonant near-fault ground motions. The robustness function was introduced to evaluate quantitatively the robustness of elastic-plastic base-isolated high-rise buildings. The fourth article is an extension of the previously proposed energy balance approach to a bilinear elastic-plastic single-degree-of-freedom system under a long-duration sinusoidal ground motion. A historical difficulty in nonlinear vibration posed by Caughey (1960) and Iwan (1961) has been overcome in a smart manner after half a century. The approach presented in this eBook, together with the previous eBooks, is an epoch-making accomplishment to open the door for simpler and deeper understanding of structural reliability and resilience of built environments in the elastic-plastic and nonlinear range.

❑ Manual of Single, Double, Triple and Quadruple Counterpoint (Classic Reprint) S. Jadassohn, 2015-08-05 Excerpt from Manual of Single, Double, Triple and Quadruple Counterpoint This manual forms an introduction to the study of single, double, triple and quadruple counterpoint in the strict style. All rules, directions, principles and observations contained in the book, are founded on the contrapuntal style of Bach, Handel, and other classic masters who followed our tonal system of major and minor keys in their writings. The aim of the pupils studies in counterpoint is, to prepare him for the study of canon and fugue; but even the disciple of art who does not intend, or is not able, to become a composer, will be enabled by such study to penetrate deeper into the works of the classic masters, and better to apprehend the sublimest creations of their art. But let no one imagine that in a course of contrapuntal study it suffices only to read or learn the rules; this could be done very easily and quickly. True progress can be made in this, as in all other disciplines of art, only by dint of serious and conscientious work. Not until the student shall have worked out the exercises contained in the manual in proper sequence and with due attention, will he be prepared to proceed to the

STUDY OF CANON AND FUGUE. PREFACE TO THE THIRD EDITION. TOGETHER WITH THE THIRD EDITION, A CONSIDERABLE NUMBER OF EXERCISES AND EXAMPLES FOR THE STUDIES IN COUNTERPOINT HAVE BEEN PUBLISHED SEPARATELY. BOTH TEACHERS AND STUDENTS WILL FIND THEM OF PRACTICAL UTILITY WHEN USED IN CONJUNCTION WITH THE EXERCISES GIVEN IN THE MANUAL ITSELF.
