The Setting Sun Osamu Dazai,1968-01-17 This powerful novel of a nation in social and moral crisis was first published by New Directions in 1956. Set in the early postwar years, it probes

the destructive effects of war and the transition from a feudal Japan to an industrial society. Ozamu Dazai died, a suicide, in 1948. But the influence of his book has made people of the setting sun a permanent part of the Japanese language, and his heroine, Kazuko, a young aristocrat who deliberately abandons her class, a symbol of the anomie which pervades so much of the modern world.

Michael Borremans: Fire from the Sun Michael Borremans, 2018-05-22 The first in a series of small-format publications devoted to single bodies of work, *Fire from the Sun* highlights Michaël Borremans's new work, which features toddlers engaged in playful but mysterious acts with sinister overtones and insinuations of violence. Known for his ability to recall classical painting, both through technical mastery and subject matter, Borremans's depiction of the uncanny, the

perhaps secret, the bizarre, often surprises, sometimes disturbs the viewer. In this series of work, children are presented alone or in groups against a studio-like backdrop that negates time and space, while underlining the theatrical atmosphere and artifice that exists throughout Borremans's recent work. Reminiscent of cherubs in Renaissance paintings, the toddlers appear as allegories of the human condition, their archetypal innocence contrasted with their suggested deviousness. In his accompanying essay, critic and curator Michael Bracewell takes an in-depth look into specific paintings, tackling both the highly charged subject matter and the masterly command of the medium. He writes, "The art of Michaël Borremans seems always to have been predicated on a confluence of enigma, ambiguity, and painterly poetics—accosting beauty with strangeness; making historic Romanticism subjugate to mysterious controlling forces that are neither crudely malevolent nor necessarily benign." Published on the occasion of Borremans's eponymous exhibition at David Zwirner in Hong Kong, this publication is available in both English-only and bilingual English/traditional Chinese editions.

The Sun Elaine Landau, 2008 Describes the sun as a star--a rather ordinary star--and as the force that makes life on Earth possible, and discusses how scientists study the sun.

The Sun do Move. The Celebrated Theory of the Sun's Rotation Around the Earth John Jasper, 2024-04-10 Reprint of the original, first published in 1882.

The Sun Stephen Feinstein, 2005 Presents information about the Sun's origins, characteristics, future, and importance to the Earth.

A Piece of the Sun Daniel Clery, 2014-07-29 How physicists are trying to solve our energy problems—by unlocking the secrets of the sun: "Explain[s] cutting-edge science with remarkable lucidity." —Booklist This revelatory book tells the story of the scientists who believe the solution to the planet's ills can be found in the original energy source: the Sun itself. There, at its center,

the fusion of 620 million tons of hydrogen every second generates an unfathomable amount of energy. By replicating even a tiny piece of the Sun's power on Earth, we can secure all the heat and energy we would ever need. The simple yet extraordinary ambition of nuclear-fusion scientists has garnered many skeptics, but, as *A Piece of the Sun* makes clear, large-scale nuclear fusion is scientifically possible—and perhaps even preferable to other options. Clery argues passionately and eloquently that the only thing keeping us from harnessing this cheap, clean and renewable energy is our own shortsightedness. “Surprisingly sprightly...Clery walks readers through the history of fusion study, from Lord Kelvin, Albert Einstein and a large cast of peculiar physicists, to all manner of international politics—e.g., the darts and feints of the Cold War, the braces applied by OPEC in the wake of the 1973 war among Israel, Egypt and Syria. Clery negotiates the hard science with aplomb.” —Kirkus Reviews “A timely perspective on truly urgent science.” —Booklist “Ultimately, Clery argues that developing a source of energy that won't damage the climate—or ever run out—is worth striving for.” —Publishers Weekly

Beneath the Sun Melissa Stewart, 2020-08-04 This lyrical tour of a variety of habitats offers young readers vivid glimpses of animals as they live out the hot season under the blazing sun. When the sun is shining brightly, people put on sunscreen or scurry inside to cool off. But how do wild animals react to the sizzling heat? Journey from your neighborhood to a field where an earthworm loops its long body into a ball underground, to a desert where a jackrabbit loses heat through its oversized ears, to a wetland where a siren salamander burrows into the mud to stay cool, and to a seashore where a sea star hides in the shade of a seaweed mat. Constance R. Bergum's glowing watercolors perfectly capture the wonder of a hot, sunny environment.

Rebel Star Colin Stuart, 2019-10-03 A fascinating and comprehensive guide to the sun - our home star - which remains

the greatest mystery in the solar system, and why understanding it is pivotal to our future existence here on Earth. In 1869, a great mystery was born. As astronomers observed a total solar eclipse, for the first time they saw the faint glow of the solar corona, the sun's outer atmosphere. Measurements of a previously unknown wavelength that made up this solar light sparked hot debate among scientists, but it was another sixty years before they discovered that this wavelength was in fact iron being burned at a staggering 3 million degrees Celsius. With the sun's surface only 6,000 degrees, this shouldn't be possible. What we now knew about the sun appeared to defy the laws of physics - and nature. But as well as being shrouded in intriguing mystery, the unpredictable nature of the sun's corona poses a serious threat to our life here on earth - the destructive potential of solar storms, caused by solar material travelling out into space at around 1 million miles an hour, is huge. Remaining beyond our reach until now, a new generation of ambitious solar missions are currently travelling closer to the sun than any previous spacecraft in history. As we enter this unprecedented era of heliophysics, there has never been a better time to get to grips with the workings of our home star.

Living with Our Sun's Ultraviolet Rays Arthur C.

Giese, 2012-12-06 Sunlight is part of everyday life and we accept it as good-and good it is in a number of ways. The sun is our source of warmth, and of the light by which we see. It is, in fact, the source of the energy with which life continues on earth. It furnishes energy for photosynthesis, and the products of photosynthesis constitute our food, building materials, and fuel. A steady state of balance and fine interrelationships exists between life on earth and all the forces and stresses in nature. This book will pin point the balance and relationships we share with sunlight. Our primary focus will be on the ultraviolet radiation of the sun, and on the ultraviolet photobiology of life on earth. This is the story of the effects of the sun's ultraviolet radiation, both

good and bad, on all of us and all of life. We will explore the nature of the sun's ultraviolet radiation as it reaches the earth's surface today, and as it probably affected the earth in the distant past; and examine the effect of such radiation on all life, unicellular organisms as well as multicellular plants and animals. The effects of the sun's ultraviolet rays are primarily a result of their action upon cells, and secondarily, a result of their interactions between cells. The cell of a multicellular organism-man included-is also part of the tissue of an organ, and the organ is part of the whole organism.

Black Sun Geoffrey Wolff,2012-04-18 Includes an afterword by the author. Harry Crosby was the godson of J. P. Morgan and a friend of Ernest Hemingway. Living in Paris in the twenties and directing the Black Sun Press, which published James Joyce among others, Crosby was at the center of the wild life of the lost generation. Drugs, drink, sex, gambling, the deliberate derangement of the senses in the pursuit of transcendent revelation: these were Crosby's pastimes until 1929, when he shot his girlfriend, the recent bride of another man, and then himself. Black Sun is novelist and master biographer Geoffrey Wolff's subtle and striking picture of a man who killed himself to make his life a work of art.
