The Setting Sun Osamu Dazai, 1968-01-17 This powerful novel of a nation in social and moral crisis was first published by New Directions in 1956. Set in the early postwar years, it probes the destructive effects of war and the transition from a feudal Japan to an industrial society. Osamu Dazai died, a suicide, in 1948. But the influence of his book has made people of the setting sun a permanent part of the Japanese language, and his heroine, Kazuko, a young aristocrat who deliberately abandons her class, a symbol of the anomie which pervades so much of the modern world.

Michael Borremans: Fire from the Sun Michael Borremans, 2018-05-22 The first in a series of small-format publications devoted to single bodies of work, *Fire from the Sun* highlights Michaël Borremans's new work, which features toddlers engaged in playful but mysterious acts with sinister overtones and insinuations of violence. Known for his ability to recall classical painting, both through technical mastery and subject matter, Borremans's depiction of the uncanny, the perhaps secret, the bizarre, often surprises, sometimes disturbs the viewer. In this series of work, children are presented alone or in groups against a studio-like backdrop that negates time and space, while underlining the theatrical atmosphere and artifice that exists throughout Borremans's recent work. Reminiscent of cherubs in Renaissance paintings, the toddlers appear as allegories of the human condition, their archetypal innocence contrasted with their suggested deviousness. In his accompanying essay, critic and curator Michael Bracewell takes an in-depth look into specific paintings, tackling both the highly charged subject matter and the masterly command of the medium. He writes, "The art of Michaël Borremans seems always to have been predicated on a confluence of enigma, ambiguity, and painterly poetics—accosting beauty with strangeness; making historic Romanticism subjugate to mysterious controlling forces that are neither crudely malevolent nor necessarily benign."

Published on the occasion of Borremans's eponymous exhibition at David Zwirner in Hong Kong, this publication is available in both English-only and bilingual English/traditional Chinese editions.

A Piece of the Sun Daniel Clery, 2014-07-29 How physicists are trying to solve our energy problems—by unlocking the secrets of the sun: “Explain[s] cutting-edge science with remarkable lucidity.” —Booklist This revelatory book tells the story of the scientists who believe the solution to the planet’s ills can be found in the original energy source: the Sun itself. There, at its center, the fusion of 620 million tons of hydrogen every second generates an unfathomable amount of energy. By replicating even a tiny piece of the Sun’s power on Earth, we can secure all the heat and energy we would ever need. The simple yet extraordinary ambition of nuclear-fusion scientists has garnered many skeptics, but, as *A Piece of the Sun* makes clear, large-scale nuclear fusion is scientifically possible—and perhaps even preferable to other options. Clery argues passionately and eloquently that the only thing keeping us from harnessing this cheap, clean and

renewable energy is our own shortsightedness. "Surprisingly sprightly...Clery walks readers through the history of fusion study, from Lord Kelvin, Albert Einstein and a large cast of peculiar physicists, to all manner of international politics—e.g., the darts and feints of the Cold War, the braces applied by OPEC in the wake of the 1973 war among Israel, Egypt and Syria. Clery negotiates the hard science with aplomb." —Kirkus Reviews "A timely perspective on truly urgent science." —Booklist "Ultimately, Clery argues that developing a source of energy that won't damage the climate—or ever run out—is worth striving for." —Publishers Weekly

Birds of the Sun Christopher W Schwartz, Stephen Plog, Patricia A. Although the birds' natural habitat is the tropical forests of Mexico and Central America, they were present at multiple archaeological sites in the region. The Sun Is Kind of a Big Deal Nick Seluk,2018-10-09 A hilarious nonfiction picture book from the New York Times bestselling author and creator of Awkward Yeti. Oh hey, guess what? The Sun never stops working to keep things on Earth running smoothly. (That's why it's been Employee of the Month for 4.5 billion years.) So why does the Sun get to be the center of attention? Because it's our solar system's very own star! This funny and factual picture book from Awkward Yeti creator Nick Seluk explains every part of the Sun's big job: keeping our solar system together, giving Earth day and night, keeping us warm, and more. In fact, the Sun does so much for us that we wouldn't be alive without it. That's kind of a big deal. Each spread features bite-sized text and comic-style art with sidebars sprinkled throughout. Anthropomorphized planets (and Pluto) chime in with commentary as readers learn about the Sun. For instance, Mars found someone's rover. Earth wants the Sun to do more stuff for it. And Jupiter just wants the Sun's autograph. Funny, smart, and accessible, *The Sun Is Kind of a Big Deal* is a must-have!

The Rotation of Sun and Stars Jean-Pierre Rozelot,2009-01-08 The Sun and stars rotate in

different ways and at different velocity rates. The knowledge of how they rotate is important in understanding the formation and evolution of stars and their structure. The closest star to our Earth, the Sun, is a good laboratory to study in detail the rotation of a G star and allows to test new ideas and develop new techniques to study stellar rotation. More or less massive, more or less evolved objects, however, can have very different rotation rate, structure and history. In recent years our understanding of the rotation of the Sun has greatly improved. The Sun has a well-known large-scale rotation, which can be measured thanks to visible features across the solar disk, such as sunspots, or via spectroscopy. In addition, several studies cast light on differential rotation in the convective zone and on meridional circulation in the radiative zone of the Sun. Even the rotation of the core of the Sun can now be studied thanks to various methods, such as dynamics of the gravitational moments and of course, helioseismology, through g-modes analysis. Moreover, the magnetic field is strongly linked to the matter motions in the solar plasma. The solar magnetic field can be measured only at the surface or in the upper layers. It is the product of the internal dynamo or of the local dynamos if they exist – in any case magnetic field and rotation cannot thus be separated.
