TT Viruses Ethel-Michele de Villiers, Harald zur Hausen, 2008-11-27 Eleven years ago the circular DNA of a novel single-stranded virus has been cloned and partially characterized by Nishizawa and Okamoto and their colleagues. According to the initials of the patient from whom the isolate originated, the virus was named TT virus. This name has been subsequently changed by the International Committee on Taxonomy of Viruses (ICTV) into Torque teno virus, permitting the further use of the abbreviation TTV. Although initially suspected to play a role in non A –E hepatitis, subsequent studies failed to support this notion. Within a remarkably short period of time it became clear that TT viruses are widely spread globally, infect a large proportion of all human populations studied thus far and represent an extremely heterogeneous group of viruses, now labelled as Anelloviruses. TT virus-like infections have also been noted in various animal species. The classification of this virus group turns out to be difficult, their DNA contains between 2200 and 3800 nucleotides, related so-called TT-mini-viruses and a substantial proportion of intragenomic recombinants further complicate attempts to combine these viruses into a unifying phylogenetic concept.

The Isle of Man TT Races Simon Vaukins, 2014-08-11 Cats with no tails, the one thousand year old Tynwald assembly, offshore finance institutions, and motorcycle road racing are all ingredients that help to define a Manx national identity. Modern, high-powered motorcycles being pushed to their limits on a course that has remained largely unchanged since 1911 is perhaps the most literal demonstration of the new meeting the old, on an island where the traditional and the modern exist peacefully and do not clash. The Isle of Man TT Races provides an excellent starting-point from which to examine the twists and turns of the island's twentieth century history and, most importantly, the deep links between sport and society. This book examines the origins and expansion of the Isle of Man TT from the first motorcar races in 1904 up to the present day, charting the event's acceleration from a small, domestic competition to a large-scale international event which has helped fuel the island's reputation as the home of motorcycle road racing. In examining the links between sport and society, this book uses the TT races to look at changes in the mechanics of Manx politics, the streamlining of the Manx economy and construction of Manx national identity; it is not a history of winners and losers at the TT. It is because the TT has deep roots in the history of the island and because it has come to form a significant part of the island's identity, that this motorcycle race continues to thrive in the present day. The TT makes the Isle of Man distinctive; others have tried and failed to replicate this event. Where else in the world can the modern motorcycle racer take in so much history and heritage at close to 200 mph?

TT Titans Matthew Richardson, 2018-05-30 A motorcycle enthusiast offers in-depth, fully illustrated profiles of the 25 greatest machines to race the Isle of Man TT. Since it began in 1907, the Isle of Mann Tourist Trophy has gained a well-deserved reputation as the most challenging—and dangerous—motorcycle race in the world. In TT Titans, Matthew Richardson explores a fascinating question: which motorcycles or sidecar outfits have made the strongest contributions to the race over the last century? As Richardson makes his choices, he describes each one in vivid detail. Richardson recounts extraordinary achievements like lap records, race victories, technical innovations and other milestones. Modern bikes from BMW, Honda, Suzuki and Yamaha are featured alongside classic models from Matchless, Norton and Velocette. Richardson also includes profiles of the men who built and rode these exceptional machines—a list that includes many of the best-known names from every era of the sport, from Stanley Woods, Bob McIntyre and Mike Hailwood to Carl Fogarty, Joey Dunlop, Dave Molyneux and John McGuinness.

100 Years of the Isle of Man TT David Wright, 2013-11-30 Run over the everyday roads of the Isle of Man for over 100 years, the world-famous Tourist Trophy races have gripped the imaginations of successive generations of motorcyclists. From the earliest days of single-speed, belt-driven machines delivering 5 bhp, to the highly developed projectiles of today offering a fearsome 200 bhp, race fans have thronged the roadside banks and watched in awe as the best racing motorcyclists in the world rode the fastest machines of their day around the twists, turns and climbs of the 374 mile Mountain Course, all in pursuit of a coveted Tourist Trophy. This new updated edition covering the 2007 - 2012 races, reveals the event's colourful history through the high-speed activities of great riders such as the Collier brothers, Geoff Duke, Mike Hailwood, Giacomo Agostini, Steve Hislop, Joey Dunlop, John McGuinness and many others. It also looks at the machines and mechanical developments and race organisation, plus the financial rewards and commercial interests; setting them all in the context of the triumphs and tragedies of a great sporting event that has seen average lap speeds rise from 40 mph to over 130 mph. Written in an easy style, this book reveals the Manx TT's colourful history through its great riders, machines, mechanical developments and race organisation and is superbly illustrated with over 250 colour photographs.

The Tomb Chapel of Menna (TT 69) Melinda Hartwig, 2020-10-20 The most detailed set of studies ever on all aspects of one of the most beautifully decorated Egyptian non-royal tombs, new in paperback This lavishly illustrated book is the culmination of a project to document and conserve the tomb of Menna, one of the most beautiful and complex painted tombs of the ancient Egyptian necropolis at Luxor. Through conservation, the tomb, which previously lay open to environmental influence, was brought back to its former glory. Aided by non-invasive methods of scientific analysis, the historical and cultural importance of Menna's paintings can now be viewed and studied and enjoyed by a worldwide audience. High-definition photography and drawings complement specialist essays by scholars, scientists, and technicians, who discuss the artistic and cultural significance of the paintings, their architectural context, and scientific importance. Directed by Dr. Hartwig and administered by the American Research Center in Egypt (ARCE) as part of its Egyptian Antiquities Conservation Project, the project was funded by a grant from the United States Agency for International Development (USAID), sponsored by Georgia State University, and carried out in collaboration with Egypt's Supreme Council of Antiquities. Search for New Physics in tt Final States with Additional Heavy-Flavor Jets with the ATLAS Detector Javier Montejo Berlingen, 2016-07-20 This doctoral thesis focuses on the search for new phenomena in top-antitop quark (tt) final states with additional b-quark jets at the LHC. It uses the full Run 1 dataset collected by the ATLAS

experiment in proton-proton collisions at $\sqrt{s}=8$ TeV. The final state of interest consists of an isolated lepton, a neutrino and at least six jets with at least four b-tagged jets, a challenging experimental signature owing to the large background from tt+heavy-flavor production. This final state is characteristic of ttH production, with the Higgs boson decaying into bb, a process that allows direct probing of the top-Higgs Yukawa coupling. This signature is also present in many extensions of the Standard Model that have been proposed as solutions to the hierarchy problem, such as supersymmetry or composite Higgs models, which predict the pair production of bosonic or fermionic top quark partners, or the anomalous production of four-top-quark events. All these physics processes have been searched for using an ambitious search strategy that has been developed on the basis of a combination of state-of-art theoretical predictions and a sophisticated statistical analysis to constrain in-situ the large background uncertainties. As a result, the most restrictive bounds to date on the above physics processes have been obtained.

Spin Correlations in tt Events from pp Collisions Boris Lemmer,2015-06-24 This thesis introduces readers to the Standard Model, the top quark and its properties, before explaining the concept of spin correlation measurement. The first measurement of top quark spin correlations at the LHC in the lepton+jets decay channel is presented. As the heaviest elementary particle, the top quark plays an essential role in the Standard Model of elementary particle physics. In the case of top quarks being produced in pairs at hadron colliders, the Standard Model predicts their spins to be correlated. The degree of correlation depends on both the production mechanism and properties of the top quark. Any deviation from the Standard Model prediction can be an indicator for new physics phenomena. The thesis employs an advanced top quark reconstruction algorithm including dedicated identification of the up- and down-type quarks from the W boson decay.

The Wall Decoration of Three Theban Tombs (TT 77, 175, and 249) Lise Manniche,1988 The complete wall decorations of 3 Theban tombs (No. 77, No. 175 and No. 249) are here published for the first time. The graves at Thebes in Egypt, belonged to a master builder of the Amon temple in the time of Thutmosis IV, a purveyor of sweets in Amenophis III's temple of the dead, and a man in the business of scented oils. To date, only individual scenes from these tombs have been published, but here the reader is presented with the decorations in their entirety, including black and white photographs and line drawings, together with transcriptions and translations of all of the related texts.
