Tagged Diane C. Mullen,2015-03-10 Liam is a fourteen-year-old graffiti artist living in project housing in Minneapolis with his single mother and three younger siblings. When Liam’s estranged older brother coerces him to tag a graffiti symbol for a rival gang, Liam’s life is threatened. Due to his apathetic attitude in the classroom and on the baseball field, Liam’s private-school scholarship is also threatened. His mother decides to send him to Lake Michigan for the summer to live with her best friend, Kat, a sculptor and art teacher, Liam soon delves into the work of Jean-Michel Basquiat, Pablo Picasso, and his own personal aesthetics. He’s encouraged to consider his art seriously and how it might contribute to a greater community. Having to decide between staying with Kat and returning home to his siblings who need him, Liam’s story inspires him to reinvent himself for the better.

Tagging Gene Smith,2007-12-27 Tagging is fast becoming one of the primary ways people organize and manage digital information. Tagging complements traditional organizational tools like folders and search on users desktops as well as on the web. These developments mean that tagging has broad implications for information management, information architecture and interface design. And its reach extends beyond these technical domains to our culture at large. We can imagine, for example, the scrapbookers of the future curating their digital photos, emails, ticket stubs and other mementos with tags. This book explains the value of tagging, explores why people tag, how tagging works and when it can be used to improve the user experience. It exposes tagging's superficial simplicity to reveal interesting issues related to usability, information architecture, online community and collective intelligence.

Electronic Tagging and Tracking in Marine Fisheries John R. Sibert,Jennifer L. Nielsen,2013-03-09 Reviews: Methods and Technology in Fish Biology and Fisheries published by Kluwer Academic Publishers is a book series dedicated to the publication of information on advanced, forward-looking methodologies, technologies, or perspectives in fish and is especially dedicated to relevant topics addressing global, fisheries. This series international concern in fish and fisheries. Humans continue to challenge our environments with new technologies and technological applications. The dynamic creativity of our own species often tends to place the greatest burden on our supporting ecosystems. This is especially true for aquatic networks of creeks, lakes, rivers and ocean environments. We also frequently use our conceptual powers to balance conflicting requirements and demands on nature and continue to develop new approaches and tools to provide sustainable resources as well as conserve what we hold most dear on local and global scales. This book series will provide a window into the developing dynamic among humans, aquatic ecosystems (both freshwater and marine), and the organisms that inhabit aquatic environments. There are many reasons to doubt the increasing social and economic value technology has gained over the last two centuries. Science and technology represent stages in human development. I agree with Ernst Mayer when he said in *Toward a New Philosophy of Biology* (1988) that endeavors to solve all scientific problems by pure logic and refined measurements are unproductive, if not totally irrelevant.

Tagged for Death Sherry Harris,1949-01-01 A garage sale fanatic searches for evidence to clear her cheating ex of murder in this cozy mystery series opener. Starting your life over at age thirty-eight isn’t easy, but that’s what Sarah Winston finds herself facing when her husband CJ runs off with a 19-year-old temptress named Tiffany. Sarah’s self-prescribed therapy happily involves hitting all the garage and tag sales in and around her small town of Ellington, Massachusetts. If only she could turn her love for bargain hunting into a full-time career. But after returning from a particularly successful day searching for yard sale treasures, Sarah finds a grisly surprise in one of her bags: a freshly bloodied shirt . . . that undoubtedly belongs to her ex, CJ, who now happens to be Ellington’s chief of police. If that’s not bad enough, it seems Tiffany has gone missing. Now it’s up to Sarah to prove that her cold-hearted ex is not a cold-blooded killer . . . Tagging and Tracking of Marine Animals with Electronic Devices Jennifer L. Nielsen,Haritz Arrizabalaga,Nuno Fragoso,Alistair Hobday,Molly Lutcavage,John Sibert,2009-06-10 The 2nd international tagging and tracking symposium was held in San Sebastian, Spain, in October 2007, seven years after the first symposium was held in Hawaii in 2000 (Sibert and Nielsen 2001). In the intervening seven years, there have been major advances in both the capability and reliability of electronic tags and analytical approaches for geolocation of tagged animals in marine habitats. Advances such as increased data storage capacity, sensor development, and tag miniaturization have allowed researchers to track a much wider array of marine animals, not just large and charismatic species. Importantly, data returned by these tags are now being used in population analyses and movement simulations that can be directly utilized in stock assessments and other management applications. Papers in this volume are divided into three sections, the first describing insights into behavior achieved using acoustic, archival, and novel tags, the second reporting on advances in methods of geolocation, while the final section includes contributions where tag data have been used in management of marine species. Accurate documentation of animal movements and behaviors in critical marine habitats are impossible to obtain with other technologies. The management and conservation of marine species are critical in today’s changing ocean environment and as electronic tags become more accurate and functional for a diversity of organisms their application continues to grow, setting new standards in science and technology.
