**English Text** J.R. Martin, 1992-11-18 This book is a comprehensive introduction to text forming resources in English, along with practical procedures for analysing English texts and relating them to their contexts of use. It has been designed to complement functional grammars of English, building on the generation of discourse analysis inspired by Halliday and Hasan's Cohesion in English. The analyses presented were developed within three main theoretical and applied contexts: (i) educational linguistics (especially genre-based literacy programmes) (ii) critical linguistics (as manifested in the development of social semiotics) and (iii) computational linguistics (in dialogue with the various text generation projects based on systemic approaches to grammar and discourse). English Text's major contribution is to outline one way in which a rich semantically oriented functional grammar can be systematically related to a theory of discourse semantics, including deconstruction of contextual issues (i.e. register, genre and ideology). The chapters have been organized with the needs of undergraduate students in theoretical linguistics and postgraduate students in applied linguistics in mind.

Text Data Management and Analysis ChengXiang Zhai, Sean Massung, 2016-06-30  
Recent years have seen a dramatic growth of natural language text data, including web pages, news articles, scientific literature, emails, enterprise documents, and social media such as blog articles, forum posts, product reviews, and tweets. This has led to an increasing demand for powerful software tools to help people analyze and manage vast amounts of text data effectively and efficiently. Unlike data generated by a computer system or sensors, text data are usually generated directly by humans, and are accompanied by semantically rich content. As such, text data are especially valuable for discovering knowledge about human opinions and preferences, in addition to many other kinds of knowledge that we encode in text. In contrast to structured data, which conform to well-defined schemas (thus are relatively easy for computers to handle), text has less explicit structure, requiring computer processing toward understanding of the content encoded in text. The current technology of natural language processing has not yet reached a point to enable a computer to precisely understand natural language text, but a wide range of statistical and heuristic approaches to analysis

and management of text data have been developed over the past few decades. They are usually very robust and can be applied to analyze and manage text data in any natural language, and about any topic. This book provides a systematic introduction to all these approaches, with an emphasis on covering the most useful knowledge and skills required to build a variety of practically useful text information systems. The focus is on text mining applications that can help users analyze patterns in text data to extract and reveal useful knowledge. Information retrieval systems, including search engines and recommender systems, are also covered as supporting technology for text mining applications. The book covers the major concepts, techniques, and ideas in text data mining and information retrieval from a practical viewpoint, and includes many hands-on exercises designed with a companion software toolkit (i.e., MeTA) to help readers learn how to apply techniques of text mining and information retrieval to real-world text data and how to experiment with and improve some of the algorithms for interesting application tasks. The book can be used as a textbook for a computer science undergraduate course or a reference book for practitioners working on relevant problems in analyzing and managing text data.

Art and Text Aimee Selby, 2009 This volume covers the development of the textual medium in art from the early combinations of text, lettering and image in the work of seminal artists such as El Lissitzky and Kurt Schwitters right up to the present day. The use of written language has been one of the most defining developments in visual art of the twentieth century. The use of text can be seen in some of the most avant-garde artwork of the twentieth

century; René Magritte and dadaist artists used it to describe anti-art and anti-aesthetic sentiment. The work of some of the most famous conceptual artists of the 1960s began to use written language as an artwork in itself. Artists such as John Baldessari, Lawrence Weiner and Bruce Nauman, who are still today some of the world's most respected artists, helped push the boundaries of what constitutes art at the time and it has continued to develop since that period. The expansive Art & Language group of artists and theorists, including Joseph Kosuth, also reconsidered the possibilities of linguistic art.

**Text Complexity** Douglas Fisher, Nancy Frey, Diane Lapp, 2016-01-28 There is a big difference between assigning complex texts and teaching complex texts No matter what discipline you teach, learn how to use complexity as a dynamic, powerful tool for sliding the right text in front of your students' at just the right time. Updates to this new edition include How-to's for measuring countable features of any written work A rubric for analyzing the complexity of both literary and informational texts Classroom scenarios that show the difference between a healthy struggle and frustration The authors' latest thinking on teacher modeling, close reading, scaffolded small group reading, and independent reading

Text and Image John Bateman, 2014-05-30 Text and image are used together in an increasingly flexible fashion and many disciplines and areas of study are now attempting to understand how these combinations work. This introductory

textbook explores and analyses the various approaches to multimodality and offers a broad, interdisciplinary survey of all aspects of the text-image relation. It leads students into detailed discussion concerning a number of approaches that are used. It also brings out their strengths and weaknesses using illustrative example analyses and raises explicit research questions to reinforce learning. Throughout the book, John Bateman looks at a wide range of perspectives: socio-semiotics, visual communication, psycholinguistic approaches to discourse, rhetorical approaches to advertising and visual persuasion, and cognitive metaphor theory. Applications of the styles of analyses presented are discussed for a variety of materials, including advertisements, picture books, comics and textbooks. Requiring no prior knowledge of the area, this is an accessible text for all students studying text and image or multimodality within English Language and Linguistics, Media and Communication Studies, Visual and Design Studies.
