## **Waze: An Easy Guide to the Best Features** Michael

Galeso, 2016-10-20 Waze is an application that is a GPS based navigational software that was made for smartphone and tablets. It was made to provide turn by turn information along with user submitted travel times and route details. It was formally called Freemap and was developed in Israel by a start-up called Waze Mobile and was then acquired by Google in 2013. It also allows a carpooling option that sees riders and drivers being connected that ride on the same route without any disruption. It is supported on the iPhone, Android, Symbian and BlackBerry platforms. The newer versions mainly support only Android and iPhone devices as the older devices do not support certain application methodologies. This book will seek to explore the features of this application and educate the users on it.

**WAZE of Life** Sholom Fried, 2021-06-25 Anyone who has ever traveled knows how confusing it can be to get around. It's not enough to say, I want to get from point A to point B. You'll need directions, landmarks, warnings about treacherous terrain. You'll need to know the rules of the road, so that you'll be able to avoid those pesky and costly traffic tickets. In fact, a travel guide is what you're looking for - a compilation of everything you'll need to get where you're going. According to traditional Judaism, the Torah does precisely this. It is Judaism's travel guide through life - a road map, so to speak for righteousness, designed to show all of us how to arrive at the destination that Hashem Intended. In our tradition, we have a road map that never leaves us, even, or especially, in difficult times. Whenever we feel lost for any reason, the words of Torah are there to elevate our spirits, give us hope, and challenge us to continue putting one foot in front of the other, to go forward in our journey. All of us need help some of the time, in finding our way. We don't like asking for help. We don't like telling people we are lost. We would also confess that when we are confused about life, about the direction in which we

are to go, too many of us have turned down more than one wrong road, too prideful to ask for advice. We don't want anyone to know that we don't know where we are going. We are embarrassed to tell people that we didn't plan well. Because we have found our way before, we figure we will find our way again. Some of us would prefer to trust in our own instincts, rather than trust a map, believing that our own moral compass was objectively perfect. But, it isn't, which is why we have our very own spiritual GPS guiding us; through the dictums of the Torah, the insights from the Talmud, and the wisdom and maxims of our Sages. My sincerest hope is that the lessons found within this book, *Waze of Life*, will help to improve the quality of each of our own spiritual driving experiences. I hope you will find that the message within speaks to you, as it did to me.

**Algorithms and Subjectivity** Eran Fisher, 2022-01-26 In this thought-provoking volume, Eran Fisher interrogates the relationship between algorithms as epistemic devices and modern notions of subjectivity. Over the past few decades, as the instrumentalization of algorithms has created knowledge that informs our decisions, preferences, tastes, and actions, and the very sense of who we are, they have also undercut, and arguably undermined, the Enlightenment-era ideal of the subject. Fisher finds that as algorithms enable a reality in which knowledge is created by circumventing the participation of the self, they also challenge contemporary notions of subjectivity. Through four case-studies, this book provides an empirical and theoretical investigation of this transformation, analyzing how algorithmic knowledge differs from the ideas of critical knowledge which emerged during modernity – Fisher argues that algorithms create a new type of knowledge, which in turn changes our fundamental sense of self and our concept of subjectivity. This book will make a timely contribution to the social study of algorithms and will prove especially valuable for scholars working at the intersections of media and communication studies, internet studies, information studies, the sociology of technology, the philosophy of

technology, and science and technology studies.

Smartphones as Locative Media Jordan Frith, 2018-06-06 Smartphone adoption has surpassed 50% of the population in more than 15 countries, and there are now more than one million mobile applications people can download to their phones. Many of these applications take advantage of smartphones as locative media, which is what allows smartphones to be located in physical space. Applications that take advantage of people's location are called location-based services, and they are the focus of this book. Smartphones as locative media raise important questions about how we understand the complicated relationship between the Internet and physical space. This book addresses these questions through an interdisciplinary theoretical framework and a detailed analysis of how various popular mobile applications including Google Maps, Facebook, Instagram, Yelp, and Foursquare use people's location to provide information about their surrounding space. The topics explored in this book are essential reading for anyone interested in how smartphones and location-based services have begun to impact the ways we navigate and engage with the physical world.

**Architecture and the Smart City** Sergio M. Figueiredo, Sukanya Krishnamurthy, Torsten Schroeder, 2019-10-18 Increasingly the world around us is becoming 'smart.' From smart meters to smart production, from smart surfaces to smart grids, from smart phones to smart citizens. 'Smart' has become the catch-all term to indicate the advent of a charged technological shift that has been propelled by the promise of safer, more convenient and more efficient forms of

living. Most architects, designers, planners and politicians seem to agree that the smart transition of cities and buildings is in full swing and inevitable. However, beyond comfort, safety and efficiency, how can 'smart design and technologies' assist to address current and future challenges of architecture and urbanism? Architecture and the Smart City provides an architectural perspective on the emergence of the smart city and offers a wide collection of resources for developing a better understanding of how smart architecture, smart cities and smart systems in the built environment are discussed, designed and materialized. It brings together a range of international thinkers and practitioners to discuss smart systems through four thematic sections: 'Histories and Futures', 'Agency and Control', 'Materialities and Spaces' and 'Networks and Nodes'. Combined, these four thematic sections provide different perspectives into some of the most pressing issues with smart systems in the built environment. The book tackles questions related to the future of architecture and urbanism, lessons learned from global case studies and challenges related to interdisciplinary research, and critically examines what the future of buildings and cities will look like.

**The Genius of Israel** Dan Senor, Saul Singer, 2023-11-07  
NEW YORK TIMES BESTSELLER \* How has a small nation of 9 million people, forced to fight for its existence and security since its founding and riven by ethnic, religious, and economic divides, proven resistant to so many of the societal ills plaguing other wealthy democracies? Why do Israelis have among the world's highest life expectancies and lowest rates of "deaths of despair" from suicide and substance abuse? Why is Israel's population young and growing while all other wealthy democracies are aging

and shrinking? How can it be that Israel, according to a United Nations ranking, is the fourth happiest nation in the world? Why do Israelis tend to look to the future with hope, optimism, and purpose while the rest of the West struggles with an epidemic of loneliness, teen depression, and social decline? Dan Senor and Saul Singer, the writers behind the international bestseller *Start-Up Nation*, have long been students of the global innovation race. But as they spent time with Israel's entrepreneurs and political leaders, soldiers and students, scientists and activists, ultra-Orthodox Jews, Tel Aviv techies, and Israeli Arabs, they realized that they had missed what really sets Israel apart. Moving from military commanders integrating at-risk youth and people who are neurodiverse into national service, to high performing companies making space for working parents, from dreamers and innovators launching a duct-taped spacecraft to the moon, to bringing better health solutions to people around the world, *The Genius of Israel* tells the story of a diverse people and society built around the values of service, solidarity, and belonging. Widely admired for having the world's highest density of high-tech start-ups, Israel's greatest innovation may not be a technology at all, but Israeli society itself. Understanding how a country facing so many challenges can be among the happiest provides surprising insights into how we can confront the crisis of community, human connectedness, and purpose in modern life. Bold, timely, and insightful, Senor and Singer's latest work shines an important light on the impressive innovative distinctions of Israeli society—and what other communities and countries can learn.

**Electronic Commerce 2018** Efraim Turban, Jon Outland, David King, Jae Kyu Lee, Ting-Peng Liang, Deborrah C. Turban, 2017-10-12 This new Edition of Electronic Commerce is a complete update of the leading graduate level/advanced undergraduate level textbook on the subject. Electronic commerce (EC) describes the manner in which transactions take place over electronic networks, mostly the Internet. It is the process of electronically buying and selling goods, services, and information. Certain EC applications, such as buying and selling stocks and airline tickets online, are reaching maturity, some even exceeding non-Internet trades. However, EC is not just about buying and selling; it also is about electronically

communicating, collaborating, and discovering information. It is about e-learning, e-government, social networks, and much more. EC is having an impact on a significant portion of the world, affecting businesses, professions, trade, and of course, people. The most important developments in EC since 2014 are the continuous phenomenal growth of social networks, especially Facebook, LinkedIn and Instagram, and the trend toward conducting EC with mobile devices. Other major developments are the expansion of EC globally, especially in China where you can find the world's largest EC company. Much attention is lately being given to smart commerce and the use of AI-based analytics and big data to enhance the field. Finally, some emerging EC business models are changing industries (e.g., the shared economy models of Uber and Airbnb). The 2018 (9th) edition, brings forth the latest trends in e-commerce, including smart commerce, social commerce, social collaboration, shared economy, innovations, and mobility.

Bambui Arts and Culture Mathias Fubah Alubafi, 2018-11-14  
This book focuses on the traditional arts and culture of Bambui, a kingdom in the western Grassfields of Cameroon. Although a small kingdom in comparison to much bigger kingdoms such as Mankon, Banson, Kom and Bali, the arts and culture of this kingdom have served, and continue to serve, as a way of life, as ritual, as decoration, and as a means of uniting with the sublime since pre-colonial times. However, in presenting the arts and culture of the western Grassfields, scholars have given much attention only to the dominant kingdoms. As such, Bambui, and many other smaller kingdoms have been rendered voiceless. This text brings forth the voice of one of the smallest kingdoms in the western Grassfields through the presentation of its historical arts, and culture, and the changes that have taken, and continue to take place, in the society. It represents primarily an examination of the socio-cultural organisation of the kingdom and the various kinds of art that are used within the different contexts. These milestones are well-illustrated with historical and contemporary images.

**BPM Everywhere** Nathaniel Palmer,Scott Francis,Peter Whibley,Surendra Reddy,Peter Fingar,Dr Setrag Khoshafian,Larry Hawes,Charles Webster,Vinay Mummigatti,Roy Altman,James Taylor,Joseph B. Lail,Keith D. Swenson,Rudiger Pryss,Stuart Chandler,David RR Webber,Mark Casey,Wil van der Aalst,Dr Anne Rozinat,Matthias Walter,Mara Nikolaidou,Alberto Manuel,2019-10-23 We are entering an entirely new phase of BPM - the era of “BPM Everywhere” or BPME. BPME represents the strategy for leveraging, not simply surviving but fully exploiting the wave of disruption facing every business over the next 5 years and beyond. Without question, one of the single most disruptive events in the last decade was the introduction of the smartphone. Consider for a moment how great of an impact this has had on the relationship between businesses and their customers. Not even the emergence of the Web and Internet-based “digital native” business models can compare with the level of intimacy now available with your customers. In the era of the Internet of Things where smart homes, appliances, cars, phones, virtually imaginable devices are all connected, BPM must, and will, be everywhere. As Peter Whibley discusses in “The Internet of Things Will Be Invisible,” by 2025 there are expected to be more than 26 billion or more connected devices. In the chapter “Digital Prescriptive Maintenance: Disrupting Manufacturing through IoT, Big Data, and Dynamic Case Management,” Dr. Setrag Khoshafian introduces the “4 Vs” of “thing” data, specifically “Volume, Velocity, Variety and Value.” From monitors and remote sensors, to appliances and vehicles, to tens of billions of other “things,” connected devices are generating meaningful and informative data that would easily overwhelm any human

being, but collectively they present critical context about processes and the state of operations. “Big Data” has never been so large, nor presented such an acute role within enterprises and the processes that drive them. BPME as well as traditional BPM methods can already be found at the center of this. Its role will grow exponentially. Emergent factors such as process mining (see chapter “Mining the Swarm” by Keith Swenson, et al.) will be critical for uncovering engagement patterns and the need for process management platforms to coordinate interaction and control of smart devices. It is intelligent BPM that is expanding the window of what can be automated, by enabling adaptable automation. The mobile strategies in far too many organizations seem to be the building of apps that presume that customers will use their smartphones like mini laptops. This avoids the fact that we now have a level of intimacy with our customer we've never had before. As discussed in the chapter “BPM to Go – Supporting Business Processes in a Mobile and Sensing World,” our customers are carrying around a device that offers a range of capabilities unlike any laptop. A smartphone produces volumes of meaningful data about our customers (think about the “4Vs”) and is able to interact with that customer in ways that a laptop never can. The growing ubiquity of connectivity always within reach combined with new services and capabilities such as mobile banking is a key part of driving constantly-changing expectations. Yet digital disruption is not limited to mobile devices, and is in fact disrupting everywhere BPM is otherwise found, and why BPM everywhere is becoming the new normal.
