Carl Sagan

Cosmos Carl Sagan, 2013-12-10 RETURNING TO TELEVISION AS AN ALL-NEW MINISERIES ON FOX *Cosmos* is one of the bestselling science books of all time. In clear-eyed prose, Sagan reveals a jewel-like blue world inhabited by a life form that is just beginning to discover its own identity and to venture into the vast ocean of space. Featuring a new Introduction by Sagan's collaborator, Ann Druyan, full color illustrations, and a new Foreword by astrophysicist Neil deGrasse Tyson, *Cosmos* retraces the fourteen billion years of cosmic evolution that have transformed matter into consciousness, exploring such topics as the origin of life, the human brain, Egyptian hieroglyphics, spacecraft missions, the death of the Sun, the evolution of galaxies, and the forces and individuals who helped to shape modern science. Praise for *Cosmos* "Magnificent . . . With a lyrical literary style, and a range that touches almost all aspects of human knowledge, *Cosmos* often seems too good to be true."—The Plain Dealer "Sagan is an astronomer with one eye on the stars, another on history, and a third—his mind's—on the human condition."—Newsday "Brilliant in its scope and provocative in its suggestions . . . shimmers with a sense of wonder."—The Miami Herald "Sagan dazzles the mind with the miracle of our survival, framed by the stately galaxies of space."—Cosmopolitan "Enticing . . . iridescent . . . imaginatively illustrated."—The New York Times Book Review

Lost in the Cosmos Walker Percy, 2011-03-29 "A mock self-help book designed not to help but to provoke . . . to inveigle us into thinking about who we are and how we got into this mess." (Los Angeles Times Book Review). Filled with quizzes, essays, short stories, and diagrams, *Lost in the Cosmos* is National Book Award-winning author Walker Percy's humorous take on a familiar genre—as well as an invitation to serious contemplation of life's biggest questions. One part parody and two parts philosophy, *Lost in the Cosmos* is an enlightening guide to the dilemmas of human existence, and an unrivaled spin on self-help manuals by one of modern America's greatest literary masters.

Cosmos: Possible Worlds Ann Druyan, 2020 *Cosmos: Possible Worlds* travels through more than 14 billion years of cosmic evolution and into an astonishing future where probes travel by light beams to distant stars, helping us solve enduring mysteries of our origins and dream toward an unimaginable time ahead.--

The Hubble Cosmos David H. DeVorkin, Robert Smith, 2015 To celebrate NASA's Hubble Space Telescope and its 25 years of accomplishments, let *The Hubble Cosmos* fill your mind with big ideas, brilliant imagery, and a new understanding of the universe in which we live. Relive key moments in the monumental Hubble story, from launch through major new instrumentation to the promise of discoveries to come. With more than 150 photographs including Hubble All-Stars -- the most famous of all the noteworthy images -- *The Hubble Cosmos* shows how this telescope is revolutionizing our understanding of the universe. --

Cosmos Giles Sparrow, 2017-10-05 The biggest and best ever reproduction of the Space Age's most remarkable images The magnificent vault of stars emblazoning Earth's night skies are but an infinitesimal fraction of the hundreds of billions that inhabit our galaxy - and there are at least as many galaxies in the universe as there are stars in the Milky Way. *Cosmos* makes sense of this dizzying celestial panorama by exploring it one step at a time, illustrating the planets, moons, stars, nebulae, white dwarfs, black holes and other exotica that populate the heavens with some of science's most spectacular photographs. The book opens with an orbital survey of planet Earth, before venturing into the solar system heading for interstellar space and the heart of our galaxy. As the journey unfolds, the rhythms of stellar life emerge: we pass through dark clouds of dust and gas ablaze with newly smelted stars and we witness dying stars bloom and fade as planetary nebulae, or tear themselves apart as supernovae. Having crossed the Milky Way, we enter intergalactic space. Out here we watch the hidden lives of galaxies: we

see them flock and cluster, forming massive conglomerations that span millions of light years, visibly warping space with their tremendous gravity. After covering an almost unimaginable 13.4 billion light years, we approach the edge of space and the dawn of time where our voyage must end, but not before we consider how the universe was born, and how it might die. A landmark in popular science publishing, *Cosmos* is a majestic, giant format, account of the ultimate journey – a 13.7-billion-light-year- (or 130-billion-trillion kilometre-) voyage from our home planet to the edge of the universe and the beginning of time. Illustrated with 450 images of staggering beauty.

Compact Cosmos is an indispensable guide. Data tables, lists of cosmological constants, and distances from Earth to other bodies in space form a useful appendix.

The Cosmos Trilogy Frederick Seidel, 2003-11-24 You Can't Like Seidel's Poems--They're Deliberately Virulent; You Can Only Gasp At Their Skill And Daring, Their Sickening Warp, Their Mercilessness.* Frederick Seidel's highly acclaimed Cosmos Trilogy is a triple thunderclap of darkness from the poet whom Richard Poirier has recently called the true heir of Walt Whitman and of whose first book Robert Lowell wrote [I] suspect the possibilities of modern poetry have been changed. Here is power that strikes. Reversing the course of Dante's Divine Comedy, Seidel's trilogy begins in the heavens, with The Cosmos Poems, and descends, passing through the Purgatorio of Life on Earth to arrive in Manhattan in Area Code 212.

See You in the Cosmos Jack Cheng, 2017-02-28 "I haven't read anything that has moved me this much since Wonder." —Jennifer Niven, author of All the Bright Places A space-obsessed boy and his dog, Carl Sagan, take a journey toward family, love, hope, and awe in this funny and moving novel for fans of Counting by 7s, Walk Two Moons, and The Curious Incident of the Dog in the Night-Time. 11-year-old Alex Petroski loves space and rockets, his mom, his brother, and his dog Carl Sagan—named for his hero, the real-life astronomer. All he wants is to launch his golden iPod into space the way Carl Sagan (the man, not the dog) launched his Golden Record on the Voyager spacecraft in 1977. From Colorado to New Mexico, Las Vegas to L.A., Alex records a journey on his iPod to show other lifeforms what life on earth, his earth, is like. But his destination keeps changing. And the funny, lost, remarkable people he meets along the way can only partially prepare him for the secrets he'll uncover—from the truth about his long-dead dad to the fact that, for a kid with a troubled mom and a mostly not-around brother, he has way more family than he ever knew. Jack Cheng's debut is full of joy, optimism, determination, and unbelievable heart. To read the first page is to fall in love with Alex and his view of our big, beautiful, complicated world. To read the last is to know he and his story will stay with you a long, long time. Stellar. —Entertainment Weekly "Life-embracing." —The Wall Street Journal Works beautifully. —The New York Times Book Review "Irresistible." —The Chicago Tribune "The best I've read in a long, long time." —Holly Goldberg Sloan, author of Counting by 7s "Riveting, inspiring, and sometimes hilarious." —Kirkus, starred review "A propulsive stream-of-conscious dive." —Publishers Weekly, starred review "A gift—a miracle." —Paul Griffin, author When Friendship Followed Me Home "Exuberant." —Booklist Full of the real kind of magic. —Ally Condie, author of Matched Absorbing, irresistible. —Common Sense Media "Incredible." —BookRiot Full of innocence and unwavering optimism. —SLC Inspiring. —Time for Kids "Powerfully affirms our human capacity for grace and love and understanding." —Gary D. Schmidt, author of Okay for Now

Discovering the Cosmos Robert C. Bless,1996 This text has two objectives: to describe the leading ideas and concepts of modern astronomy; and to indicate how astronomy in particular and physical science in general developed, what its methods are, its goals and its limitations.

Genesis of the Cosmos Paul A. LaViolette,2004-04-15 Paul LaViolette reveals astonishing parallels between cutting edge scientific thought and early creation myths, and how these myths encode a theory of cosmology in which matter is continually growing from seeds of order that emerge spontaneously from chaos. Exposing the contradictions of the Big Bang theory, LaViolette leads us beyond the restrictive metaphors of modern science and into a new science for the 21st century.

Life in the Cosmos Manasvi Lingam,Abraham Loeb,2021-06-29 A rigorous and scientific analysis of the myriad possibilities of life beyond our planet. ÒAre we alone in the universe?Ó This tantalizing question has captivated humanity over millennia, but seldom has it been approached rigorously. Today the search for signatures of extraterrestrial life and intelligence has become a rapidly advancing scientific endeavor. Missions to Mars, Europa, and Titan seek evidence of life. Laboratory experiments have made great strides in creating synthetic life, deepening our understanding of conditions that give rise to living entities. And on the horizon are sophisticated telescopes to detect and characterize exoplanets most likely to harbor life. *Life in the Cosmos* offers a thorough overview of the burgeoning field of astrobiology, including the salient methods and paradigms involved in the search for extraterrestrial life and intelligence. Manasvi Lingam and Abraham Loeb tackle three areas of interest in hunting for life Òout thereÓ: first, the pathways by which life originates and evolves; second, planetary and stellar factors that affect the habitability of worlds, with an eye on the biomarkers that may reveal the presence of microbial life; and finally, the detection of technological signals that could be indicative of intelligence. Drawing on empirical data from observations and experiments, as well as the latest theoretical and computational developments, the authors make a compelling scientific case for the search for life beyond what we can currently see. Meticulous and comprehensive, *Life in the Cosmos* is a master class from top researchers in astrobiology, suggesting that the answer to our age-old question is closer than ever before.
