Antioxidants in Disease Mechanisms and Therapy ,1996-12-10 Antioxidants in Disease Mechanisms and Therapy presents molecular actions of natural and synthetic antioxidants and emphasizes the potential role in disease mechanisms and therapeutic strategies. The modulationof gene expression by the induction of antioxidant enzymes is a novel role beyond the direct antioxidant action. The volume explores the current state of knowledge on oxidants and antioxidants in disease processes, including arteriosclerosis, adult respiratory distress syndrome, cystic fibrosis, Down's syndrome, inflammation, cataract, age-related macular degeneration, afflications of the nervous system, AIDS, liver diseases, diabetes, skin diseases, and cancer. Key Features * Contains cutting-edge information on focused topics written by expert scientists * Provides the first in-depth treatment of novel compounds, such as melatonin and polyamines * Attempts molecular pathophysiology which links basic science and the clinic * Presents critical assessment of controversial topics

Advances in Cultural Linguistics Farzad Sharifian,2017-05-02 This groundbreaking collection represents the broad scope of cutting-edge research in Cultural Linguistics, a burgeoning field of interdisciplinary inquiry into the relationships between language and cultural cognition. The materials surveyed in its chapters demonstrate how cultural conceptualisations encoded in language relate to all aspects of human life - from emotion and embodiment to kinship, religion, marriage and politics, even the understanding of life and death. Cultural Linguistics draws on cognitive science, complexity science and distributed cognition, among other disciplines, to strengthen its theoretical and analytical base. The tools it has developed have worked toward insightful investigations into the cultural grounding of language in numerous applied domains, including World Englishes, cross-cultural/intercultural pragmatics, intercultural communication, Teaching English as an International Language (TEIL), and political discourse analysis.

Redox-Active Therapeutics Ines Batinić-Haberle,Júlio S. Rebouças,Ivan Spasojević,2016-10-13 This essential volume comprehensively discusses redox-active therapeutics, focusing particularly on their molecular design, mechanistic, pharmacological and medicinal aspects. The first section of the book describes the basic aspects of the chemistry and biology of redox-active drugs and includes a brief overview of the redox-based pathways involved in cancer and the medical aspects of redox-active drugs, assuming little in the way of prior knowledge. Subsequent sections and chapters describe more specialized aspects of central nervous system injuries, neurodegenerative diseases, pain, radiation injury and radioprotection (such as of brain, lungs, head and neck and erectile function) and neglected diseases (e.g., leishmaniasis). It encompasses several major classes of redox-active experimental therapeutics, which include porphyrins, salens, nitrones, and most notably metal-containing (e.g., Mn, Fe, Cu, Zn, Sb) drugs as either single compounds or formulations with nanomaterials and quantum dots. Numerous illustrations, tables and figures enhance and complement the text; extensive references to relevant literature are also included. Redox-Active Therapeutics is an invaluable addition to Springer's Oxidative Stress in Applied Basic Research and Clinical Practice series. It is essential reading for researchers, clinicians and graduate students interested in understanding and exploring the Redoxome—the organism redox network—as an emerging frontier in drug design, redox biology and medicine.

Inflammation, Aging, and Oxidative Stress Stephen C. Bondy,Arezoo Campbell,2016-12-14 The book describes the major degenerative processes and pathologies exacerbated by senescence and how they can be alleviated through retardation of cellular aging. Topics discussed include neurodegenerative disease, protein oxidation, cerebrovascular disease, particle-induced inflammation and cardiovascular disease, Alzheimer's disease, ovarian aging, dietary and endogenous anti-oxidants in management of Parkinson's disease, and effects of exercise on oxidation and inflammation. The nineteen expertly authored chapters are organized into three sections in order to present a complete picture to the reader: Age Related Cellular Events, Role of Inflammatory and Oxidative Processes in Age-Related Diseases, and Retardation of Cellular Aging. Inflammation, Oxidative Stress and Age-Related Disease draws from a variety of international perspectives and provides a comprehensive overview of the relationship between disease, cell aging, and oxidative stress, as well as potential for preventing or slowing these processes. This installment of Springer's Oxidative Stress in Applied Basic Research and Clinical Practice is ideal for researchers, clinicians, and advanced graduate students in the fields of cardiology, neuroscience, biogerontolgy, and cell biology.

Free Radicals in Biology and Medicine Barry Halliwell,John M. C. Gutteridge,2015 Free Radicals in Biology and Medicine has become a classic text in the field of free radical and antioxidant research. Now in its fifth edition, the book has been comprehensively rewritten and updated whilst maintaining the clarity of its predecessors. Two new chapters discuss 'in vivo' and 'dietary' antioxidants, the first emphasising the role of peroxiredoxins and integrated defence mechanisms which allow useful roles for ROS, and the second containing new information on the role of fruits, vegetables, and vitamins in health and disease. This new edition also contains expanded coverage of the mechanisms of oxidative damage to lipids, DNA, and proteins (and the repair of such damage), and the roles played by reactive species in signal transduction, cell survival, death, human reproduction, defence mechanisms of animals and plants against pathogens, and other important biological events. The methodologies available to measure reactive species and oxidative damage (and their potential pitfalls) have been fully updated, as have the topics of phagocyte ROS production, NADPH oxidase enzymes, and toxicology. There is a detailed and critical evaluation of the role of free radicals and other reactive species in human diseases, especially cancer, cardiovascular, chronic inflammatory and neurodegenerative diseases. New aspects of ageing are discussed in the context of the free radical theory of ageing. This book is recommended as a comprehensive introduction to the field for students, educators, clinicians, and researchers. It will also be an invaluable companion to all those interested in the role of free radicals in the life and biomedical sciences.

Molecular Microbial Ecology Mark Osborn,Cindy Smith,2004-06-02 Microoganisms are distributed across every ecosystem, and microbial transformations are fundamental to the operation of the biosphere. Microbial ecology is the study of this interaction between microorganisms and their environment, and arguably represents one of the most important areas of biological research. Yet for many years our study of microbial flora was severely limited: the primary method of culturing microorganisms on media allowed us to study only between 0.1 and 10% of the total microbial flora in any given environment. Molecular Microbial Ecology gives a comprehensive guide to the recent revolution in the study of microorganisms in the environment. Details are given on molecular methods for isolating some of the previously uncultured and numerically dominant microbial groups. PCR-based approaches to studying prokaryotic systematics are described, including ribosomal RNA analysis and stable isotope probing. Later chapters cover DNA hybridisation techniques (including fluorescent in situ hybridisation), as well as genomic and metagenomic approaches to microbial ecology. Gathering together some of the world's leading experts, this book provides an invaluable introduction to the modern theory and molecular methods used in studying microbial ecology.

Mathematical Grammar of Biology Michel Eduardo Beleza Yamagishi,2017-08-31 This seminal, multidisciplinary book shows how mathematics can be used to study the first principles of DNA. Most importantly, it enriches the so-called "Chargaff's grammar of biology" by providing the conceptual theoretical framework necessary to generalize Chargaff's rules. Starting with a simple example of DNA mathematical modeling where human nucleotide frequencies are associated to the Fibonacci sequence and the Golden Ratio through an optimization problem, its breakthrough is showing that the reverse, complement and reverse-complement operators defined over oligonucleotides induce a natural set partition of DNA words of fixed-size. These equivalence classes, when organized into a matrix form, reveal hidden patterns within the DNA sequence of every living organism. Intended for undergraduate and graduate students both in mathematics and in life sciences, it is also a valuable resource for researchers interested in studying invariant genomic properties.

Becoming Elektra Mick Houghton,2010-09 An account of Elektra Records in the Jac Holzman years, from 1950 to 1973, Becoming Elektra tells the story of the label's growth from a small folk label to a major hit-making concern. Jac Holzman's role in founding and running the company is central to the story, and his capacity for the lateral thinking that led to innovations such as the first-ever sampler album and a million-selling series of sound effects records is a recurring theme. Opening with the moment that Holzman discovered The Doors, the story then goes back to the '50s, when the label brought folk music to a wide audience through artists such as Jean Ritchie, Josh White, Theodore Bikel, and Bob Gibson. Moving into the '60s and '70s, the story covers artists that read like an inventory of musical innovation: Love, Judy Collins, Tim Buckley, Fred Neil, David Ackles, Phil Ochs, Bread, Queen, Mickey Newbury, The Incredible String Band, Carly Simon, The Stooges and The MC5.

Class Field Theory and L Functions Franz Halter-Koch,2022-03-13 The book contains the main results of class field theory and Artin L functions, both for number fields and function fields, together with the necessary foundations concerning topological groups, cohomology, and simple algebras. While the first three chapters presuppose only basic algebraic and topological knowledge, the rest of the books assumes knowledge of the basic theory of algebraic numbers and algebraic functions, such as those contained in my previous book, An Invitation to Algebraic Numbers and Algebraic Functions (CRC Press, 2020). The main features of the book are: A detailed study of Pontrjagin's dualtiy theorem. A thorough presentation of the cohomology of profinite groups. A introduction to simple algebras. An extensive discussion of the various ray class groups, both in the divisor-theoretic and the idelic language. The presentation of local and global class field theory in the algebra-theoretic concept of H. Hasse. The study of holomorphy domains and their relevance for class field theory. Simple classical proofs of the functional equation for L functions both for number fields and function fields. A self-contained presentation of the theorems of representation theory needed for Artin L functions. Application of Artin L functions for arithmetical results.

New Frontiers in Screening for Microbial Biocatalysts K. Kieslich,C.P. van der Beek,J.A.M. de Bont,W.J.J. van den Tweel,1997-12-09 With screening and selection of biocatalysts being undervalued in Europe in comparison with USA and especially Japan, the working parties Applied Biocatalysis and Microbial Physiology of the European Federation of Biotechnology decided to organise an international symposium entitled New Frontiers in Screening for Microbial Biocatalysts. Novel screening techniques, microbial biodiversity, microbial physiology and molecular genetics were discussed to give better insights into possibilities and limitations of obtaining biocatalysts from nature. These proceedings provide a comprehensive overview of the present state-of-the-art in the field of biocatalysts screening.

Bentham Briefs in Biomedicine and Pharmacotherapy Oxidative Stress and Natural Antioxidants Pardeep Kaur,Rajendra G. Mehta, Robin, Tarunpreet Singh Thind, Saroj Arora,2021-09-29 Bentham Briefs in Biomedicine and Pharmacotherapy brings new trends and techniques in pharmacology and medical biochemistry to the forefront through unique volumes. Each volume provides a brief review of selected topics, written by scientific experts. The book series is essential reading for graduate students and researchers in pharmacology and life sciences as well as medical professionals seeking knowledge for research oriented projects. The first volume, Oxidative Stress and Natural Antioxidants, is a compilation of articles about free radicals (which are extremely reactive, short-lived molecules with unpaired electron valency), and antioxidants (which are stabilizing agents of free radicals in the body). The volume presents 17 chapters on the biochemistry of free radicals and antioxidants, with contributions from over 60 scientists. Readers will understand the basic and clinical aspects of free radical biomedicine, the role of antioxidants in neutralizing free radicals through physiological homeostasis, as well as the range of natural compounds which can be used to combat oxidative stress. The chapters also cover special topics such as recent advances in preparation methods of antioxidants, and industrial applications of antioxidants. The range of topics in this volume provide a consolidated reference for a broad set of readers on the subject.

Jejueo Changyong Yang,Sejung Yang,William O'Grady,2019-11-30 Jeju Island, located about 30 miles southwest of the Korean mainland, is famous for its natural beauty, dolhaleubang ("stone grandfather") statues, haenyeo ("sea women") divers—and its language, which has only recently been recognized as distinct from Korean. This finding—still considered controversial—undermines the centuries-old belief that Korea has a single language within its borders and opens the door to an entirely new perspective on linguistic diversity in East Asia. Jejueo: The Language of Korea's Jeju Island offers both an introduction to the language and the foundation for a wave of new research on its many unique features. Through its comprehensive approach, the book helps establish the importance of Jejueo to the cultural and linguistic heritage of not only Jeju Island, but also the entire Korean peninsula. After a brief introductory chapter on the history of the island and its culture, the authors work their way through the language step by step, examining its sounds, part-of-speech system, and rich inventory of suffixes for both nouns and verbs, to which several chapters are devoted.

Carefully written to minimize technical language and supplemented with hundreds of examples, the work is intended to be accessible to scholars working in all fields of Korean studies. Jejueo tells the story of a language that has been under wraps for far too long and is now in peril. After centuries of use as the first language of the island, only a few thousand elderly fluent speakers remain, leading UNESCO to classify Jejueo as "critically endangered" in 2010. As the first full-length treatment of Jejueo in English, this book marks a milestone in Korean studies and is sure to trigger extensive discussion of the language and its place in Korean society.
