The Cutting Edge Mark A. Lorell,Hugh P. Levaux,United States. Air Force,Project Air Force (U.S.),1998 This pictorial history, featuring nearly 40 rare aircraft photos, discusses the major trends in the history of jet fighter design and development in the United States since WWII. With the declining size and experience base of the U.S. military aerospace industry, many worry about the industry's ability to support future military requirements. The authors examine the successes of the past to help shape research and development policies for the future.

Wings That Stay on Edward V. Coggins,2000-05-01 From the Preface: This book was required. As a former professor of military history at the American Military University (AMU) and a retired USAF Colonel, I wanted to teach a course on the effects of fighter aviation in war. In addition, I wanted to create a course that was a hands-on approach to fighter aviation history. Having flown USAF fighters for more than 20 years, I felt I had a good working knowledge of fighter aviation, but when I researched the subject I found I would have to ask my students to read scores of books to provide the background they would need. There was no single-source book that covered everything I wanted to cover. I determined to write that book. I wanted to write a straightforward book in plain language that would not bore fighter pilots and at the same time that would be simple enough to be attractive to laymen as well as air power historians. That is what I have done, I have covered some detailed thoughts about fighter flying in what Southern Americans might call biscuits and gravy language. The overriding premise of the text, is that the fighter has been the key element in the air power equation and continues in that role today although this role may be changing with the advent of good, reliable, beyond visual range air-to-air missiles. This view has not been universally held over the years; however, it is a view that has been held by fighter pilots since the advent of the fighter. More and more historians are beginning to support this view. Table of Contents: World War I; Fighter Development Between Wars; The Air Wars Between World Wars; Fighter Development In World War II; The Korean War; The Fighter In The Vietnam War; The Arab-Israeli Wars; The India-Pakistani Conflicts; The Air War In The Falklands; Soviet Experience In Afghanistan; The Persian Gulf War; The Future; Summary And Conclusions.\; Appendices Definitions.

German Fighter Aircraft in World War I Mark C. Wilkins, 2019-11-19 This fully illustrated volume explores German military aviation during WWI through archival photographs and authentically detailed replicas. Fighter aircraft were developed during World War I at an unprecedented rate, as nascent air forces sought to achieve and maintain air supremacy. German manufacturers innovated at top speed, while constantly scrutinizing the development of new enemy aircraft. The Germans also utilized the concept of modular engineering, which allowed them to disassemble or reassemble their aircraft quickly in the field. The pinnacle of their aeronautical innovations was the iconic Fokker D VII—the only aircraft specifically mentioned in the Treaty of Versailles, which forbade Germany from building it after the war. *German Fighter Aircraft in World War I* explores how German fighter aircraft were developed during the war, the advancements and trials that made the Fokker D VII possible, and the different makes and types of aircraft. Using unpublished images including photographs of surviving aircraft, archive images, and models and replicas, this volume shows details of aircraft that were kept top secret during the war. Extensively illustrated with 140 photos and ten color profiles, this is will be essential reading for all WWI aviation enthusiasts and modelers.

Williams, 2002 Traces the evolution of the American fighter plane through detailed profiles and photographs of forty planes, from the Thomas-More MB-3 to the Lockheed Martin F-22 Raptor, with information about the people who contributed to their design and development.

Fiat CR.42 Aces of World War 2 Håkan Gustavsson, Ludovico Slongo, 2013-02-20 The Fiat CR.42, a logical development of the Fiat CR.32, was the last single-seat fighter biplane to be produced. It entered service with the Italian Regia Aeronautica in May 1939 before being exported to Belgium, Hungary and Sweden. Its combat debut came when the Belgian air force threw its fleet into action during the German invasion of the Low Countries on 10th May 1940. Despite being quickly overwhelmed, the Belgian pilots managed to make a number of aerial claims. The CR.42 became heavily involved in the fighting in North Africa and although it was gradually replaced by more modern fighters, it continued in a point defence and ground support role until the end of the war. Drawing on research from a range of sources, this book examines the extensive employment of the Italian fighter plane during the course of World War II.
