Pro refrigerio animae: Death and Memory in East-Central Europe Angela Jianu,Gheorghe Lazăr,2023-08-04 The historiography of death, memory, and testamentary practices is already abundant in Western Europe and a fairly large number of extra-European regions. For East-Central Europe there are many short studies in various regional languages, mainly on anthropological/ethnographic aspects of the funeral rituals. This is an edited collection of studies by international scholars on the interlocking themes of attitudes and discourses on death, commemorative practices, and inheritance/testamentary strategies in the Balkans and East-Central Europe. These and other related themes are addressed comparatively and cover areas including Albania, Bulgaria, Romania, Greece, and areas of the former Yugoslavia, Hungary, and Austria from the perspective of imperial – Ottoman and Habsburg – legacies. Pro refrigerio animae: Death and Memory in East-Central Europe contributes to this subject by: linking anthropological/religious/cultural approaches to death to the legal/economic aspects of inheritance/commemoration; adding a still absent East-Central European and Habsburg, Balkan, and Ottoman dimension to the study of death, memorialization, and testaments; and presenting an abundant primary and secondary material in English translation and thus placing research on death and testaments by East-Central and Greek scholars within the international scholarly circuit.

Memory Training Pro Karen Chapman,2017-11-08 Have you ever thought what would your life be like if you could keep in mind information both easily and quickly? Or the other way round, imagine that you were born without memory? How can you live? Who are you? How do you know where your home is? Your memory is a binder that connects the parts of your life together, everything you are able to do - learn, speak, write, think, create or even know how to brush teeth - exists thanks to your memory. But how to improve the cornerstone of our existence? The techniques explained in this book show you how to code information vividly, using stories, familiar journeys, strong mental images and so on. First of all, everything you need is to focus on what you're trying to remember. It is common knowledge, that the concentration depends on your memory, once you improve your concentration you improve your memory. The Link method of memory training presented in chapter two, makes it possible to remember the items for

some days, even if they aren't used. I'm sure, you have rhymed the word one day already to memorize them. The Peg system (Chapter three) is excellent for remembering lists in sequence; as soon as the peg words are encoded with the corresponding numerical counterpart, it is so easy to make an uncommon association. Do you remember well the places that are already familiar to you? Could you memorize all the rooms within your house, head office or other places? The deed is almost done! You are in a fair way to the Loci system of memory technique (Chapter four) that allows to recall and memorize an imagined unlimited number of the items in a special fixed order. If you need to memorize things constantly, go off on a long-term journey (Chapter five), take a good look at things around you, touch them and walk around them. This will all be essential in your real memory. Memories created in such a way can become constant without a lot of effort. Try to remember numbers, but without effect? The Phonetic number system (Chapter six) keeps one of the leading places among the memory techniques using associations and imaginations. A shocking, powerful trick for memorizing the numbers is found - it is the transformation of the numbers to letters. The Alphabet Technique as one of the most complicated techniques requires the longer arrangements and is more difficult to encode than other systems. But! This way of the storing the information in your brain allows to remember and code a list consisting of more than 20 items! The prescription presented at the Chapter seven helps you to master this technique. The Major System allows to transform the numbers into the words (Chapter eight); the system begins its function with transferring digits into the consonant sounds, adding the vowels before, between and after those letters. Chapter nine presents us the Magnetic Memory method that provides the use of various elements of your daily routine and a possible way how can the world you live in to be turned into a Memory Palace. Do you have your own palace? Would you invite us to take a trip altogether? Forming a story (Chapter Ten), Connection technique (Chapter Eleven), the Snapshot technique (Chapter twelve), Visualization(Chapter thirteen), Mnemonic Memory Game (Chapter fourteen), Chunking method (Chapter fifteen) and the First letter association(Chapter sixteen) techniques are funny ways to strengthen your memory and keep in mind the most important events as well as numbers, items, definitions, foreign vocabulary, poems, stories, speeches etc. This book will save you a lot of energy and time because it is the best teacher of memory improvement!

Development of Long-Term Retention Mark L. Howe,Charles J. Brainerd,Valerie F. Reyna,2012-12-06 For a number of decades now the study of

children's memory development, with few exceptions, has been synonymous with the development of processes that lead to the initial encoding and immediate retention of information. Although there is little doubt that the study of such acquisition processes is central to understanding memory development, the long-term retention of previously encoded information represents at least as important a component of children's memory. Indeed, as both students of memory development and educators, our interest is in the maintenance and utilization of knowledge over considerable periods of time, not just in the immediate (e. g. , classroom) context. Clearly, then, without an understanding of how recently acquired information is maintained in memory over extended periods of time, our theories of long-term memory development remain incomplete at best. Although children's forgetting and reminiscence was a topic of inquiry early in this century, it is only recently, due in part to the current controversy concerning the reliability of children's eyewitness testimony, that the study of long-term retention has resurfaced in the scientific literature. The purpose of this volume is to draw together some of the principals involved in this resurgence to summarize their recent research programs, present new and previously unpublished findings from their labs, and outline the issues they believe are important in the study of children's long-term retention.

Cycling for Sustainable Cities Ralph Buehler, John Pucher, 2021-02-02 How to make city cycling--the most sustainable form of urban transportation--safe, practical, and convenient for all cyclists. Cycling is the most sustainable mode of urban transportation, practical for most short- and medium-distance trips--commuting to and from work or school, shopping, visiting friends, going to the doctor's office. It's good for your health, spares the environment a trip's worth of auto emissions, and is economical for both public and personal budgets. Cycling, with all its benefits, should not be reserved for the fit, the spandex-clad, and the daring. **Cycling for Sustainable Cities** shows how to make city cycling safe, practical, and convenient for all cyclists.

Cognitive Rehabilitation of Memory PRO-ED, Incorporated, 2005-01

Implicit Memory Peter Graf, Michael E.J. Masson, 2013-12-02 The immense growth of research on implicit and explicit memory is making it difficult to keep up with new methods and findings, to gauge the implications of new discoveries, and to ferret out new directions in research and theory development. The present volume provides a status report of work on implicit and explicit memory in the three areas that have contributed the bulk of what is known about this domain -- cognitive psychology, lifespan developmental psychology, and neuropsychology. Highlighting developments in methods, critical findings, and theoretical positions, this volume outlines promising new research directions. By so doing, it provides the reader with a multi-disciplinary perspective on implicit and explicit memory, and thereby enables a cross-fertilization of ideas and research. The chapters that make up this volume were written by experts on the topic of implicit and explicit memory. These contributors were asked to write for a broad audience -- for their colleagues from allied disciplines, for new researchers, for advanced undergraduate and graduate students -- to help them gain a comprehensive overview of the mushrooming research on this topic, grasp the most fundamental empirical and theoretical issues, and focus on new research directions.

Brain Sleep Memory Productivity Dr Jane George, Sleep is a very active state. Sleep is important to a number of brain functions and important to maintain the functioning of neurons including how nerve cells communicate with each other. In fact, the brain and body stay remarkably active during sleep. Sleep disturbances and sleep deprivation are considered as a necessity and in some quarters considered to be fashionable for night time activities. Sleep loss and sleep disturbances in modern society are due to changes in a variety of environmental and social conditions for example less dependence on daylight for most activities, extended shift work and 24/7 round-the-clock activities. Sleep deprivation and sleep disorders have great impact on both memory function and non-memory function of cognitive processes.

Prospective Memory Maria A. Brandimonte, Gilles O. Einstein, Mark A. McDaniel, 2014-02-25 Devoted exclusively to prospective memory, this volume

organizes the research and thoughts of the important contributors to the field in one comprehensive resource. The chapter authors not only focus on their own work, but also review other research areas and address those where the methods and theories from the retrospective memory literature are useful and where they fall short. Each section is followed by at least one commentary written by a prominent scholar in the field of memory. The commentators present critical analyses of the chapters, note ideas that they found particularly exciting, and use these ideas as a foundation on which to elaborate their own views of prospective memory. This volume will stimulate the thinking of active prospective memory researchers, provide a coherent organization of the area for the increasing number of people who are interested in prospective memory but who are not yet actively conducting research in the area, and serve as a book of readings for upper division seminars.
