Maura Phillips Mackowski

Earth and Space Nirmala Nataraj, 2015-10-13 “[A] glorious, pictorial tour of the universe . . . beginning with photos depicting Earth from space and progressing through . . . the individual planets.” –School Library Journal Preface by Bill Nye Take a tour of the universe with this breathtaking collection of photographs from the archives of NASA. Astonishing images of Earth from above, the phenomena of our solar system, and the celestial bodies of deep space will captivate readers and photography lovers with an interest in science, astronomy, and the great beyond. Each extraordinary photograph from the legendary space agency is paired with explanatory text that contextualizes its place in the cosmic ballet of planets, stars, dust, and matter—from Earth’s limb to solar flares, the Jellyfish Nebula to Pandora’s Cluster. Featuring a preface by Bill Nye, this engaging ebook offers up-close views of our remarkable cosmos, and sparks wonder at the marvels of Earth and space. “Delve into the great beyond with these awe-inspiring photos from NASA’s archive.” –Entertainment Weekly “Puts some of our most magnificent space imagery in context, and it’s enough to make anyone feel like just the tiniest little speck of stardust.” –BuzzFeed

teaches science with clear introductions and content.

The Space Book Jim Bell, 2018 Presents a series of 250 significant events in the history of astronomy and space exploration, from the original formation of the galaxies, to the space mission to the planet Mars, to speculation about the end of the universe.

Life in Space Maura Phillips

Mackowski, 2022-05-24 A little-known yet critical part of NASA history *Life in Space* explores the many aspects and outcomes of NASA's research in life sciences, a little-understood endeavor that has often been overlooked in histories of the space agency. Maura Mackowski details NASA's work in this field from spectacular promises made during the Reagan era to the major new directions set by George W. Bush's Vision for Space Exploration in the early twenty-first century. At the first flight of NASA's space shuttle in 1981, hopes ran high for the shuttle program to achieve its potential of regularly transporting humans, cargo, and scientific experiments between Earth and the International Space Station. Mackowski describes different programs, projects, and policies initiated across NASA centers and headquarters in the following decades to advance research into human safety and habitation, plant and animal biology, and commercial biomaterials. Mackowski illuminates these ventures in fascinating detail by drawing on rare archival sources, oral histories, interviews, and site visits. While highlighting significant achievements and innovations such as space

radiation research and the Neurolab Spacelab Mission, Mackowski reveals frustrations—lost opportunities, stagnation, and dead ends—stemming from frequent changes in presidential administrations and policies. For today's dreams of lunar outposts or long-term spaceflight to become reality, Mackowski argues, a robust program in space life sciences is essential, and the history in this book offers lessons to help prevent leaving more expectations unfulfilled.

Space Case Stuart Gibbs, 2014-09-16 It's a murder mystery on the moon in this humorous and suspenseful space adventure from the author of *Belly Up* and *Spy School* that The New York Times Book Review called "a delightful and brilliantly constructed middle grade thriller." Like his fellow lunarnauts—otherwise known as Moonies—living on Moon Base Alpha, twelve-year-old Dashiell Gibson is famous the world over for being one of the first humans to live on the moon. And he's bored out of his mind. Kids aren't allowed on the lunar surface, meaning they're trapped inside the tiny moon base with next to nothing to occupy their time—and the only other kid Dash's age spends all his time hooked into virtual reality games. Then Moon Base Alpha's top scientist turns up dead. Dash senses there's foul play afoot, but no one believes him. Everyone agrees Dr. Holtz went onto the lunar surface without his helmet properly affixed, simple as that. But Dr. Holtz was on the verge of an important new discovery, Dash finds out, and it's a secret that could change everything for the Moonies—a secret someone just might kill to keep...

A New American Space Plan Travis S.

Taylor, Stephanie Osborn, 2012-11-15 Meet the Rocket City Rednecks. They're five backwoods guys from the rocket city: Huntsville, Alabama, home to NASA's Marshall Space Flight Center and the birthplace of the U.S. space program. Sure, they love to shoot stuff and drink beer, and one of 'em lives in a trailer, but with a family tree full of NASA rocket scientists (not to mention their own PhDs and advanced degrees), they aim a little higher³/₄ like using homemade moonshine to fuel a rocket! Now, in typical laidback style, Dr. Travis S. Taylor, leader of the crew, delivers the goods on how America can return to space exploration and manned space flight. What's needed is a good old try anything attitude, a bit of gumption, and the spectacularly entertaining backyard science that's the Rocket City Redneck specialty. At the publisher's request, this title is sold without DRM (Digital Rights Management).

Implications of Ultra-Low-Cost Access to Space

Todd Harrison, Andrew Hunter, Kaitlyn Johnson, Thomas Roberts, 2017-04-03 This study explores the possibility of a space industry significantly less constrained by the cost of access to space.

The Benefits of Spaceflight and Space Exploration Jason Porterfield, 2017-07-15 For millennia, humanity has looked to the stars with wonder and longing. The dream of taking flight and exploring the solar system was realized in the 1950s, when the first satellites and manned orbital missions were launched. Humans continue to

send scientific instruments, telescopes, and astronauts into space in an effort to learn more about the universe and about Earth. This title will explain the practical and scientific benefits of space exploration, from tracking climate change to global cooperation through shared research.

A Midterm Assessment of Implementation of the Decadal Survey on Life and Physical Sciences Research at NASA National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, Space Studies Board, Aeronautics and Space Engineering Board, Committee on a Midterm Assessment of Implementation of the Decadal Survey on Life and Physical Sciences Research at NASA, 2018-05-09 The 2011 National Research Council decadal survey on biological and physical sciences in space, *Recapturing a Future for Space Exploration: Life and Physical Sciences Research for a New Era*, was written during a critical period in the evolution of science in support of space exploration. The research agenda in space life and physical sciences had been significantly descoped during the programmatic adjustments of the Vision for Space Exploration in 2005, and this occurred in the same era as the International Space Station (ISS) assembly was nearing completion in 2011. Out of that period of change, *Recapturing a Future for Space Exploration* presented a cogent argument for the critical need for space life and physical sciences, both for enabling and expanding the exploration capabilities of NASA as well as for contributing unique science in many fields that can be enabled by access to the spaceflight

environment. Since the 2011 publication of the decadal survey, NASA has seen tremendous change, including the retirement of the Space Shuttle Program and the maturation of the ISS. NASA formation of the Division of Space Life and Physical Sciences Research and Applications provided renewed focus on the research of the decadal survey. NASA has modestly regrown some of the budget of space life and physical sciences within the agency and engaged the U.S. science community outside NASA to join in this research. In addition, NASA has collaborated with the international space science community. This midterm assessment reviews NASA's progress since the 2011 decadal survey in order to evaluate the high-priority research identified in the decadal survey in light of future human Mars exploration. It makes recommendations on science priorities, specifically those priorities that best enable deep space exploration.

Exploring Space Nancy Dickmann, 2018-07-15 For young science lovers, space exploration is perhaps one of the coolest fields of study. Readers of this illuminating book will get a peek into what it's like to visit the moon, climb aboard the International Space Station, and explore many other parts of space. Accessible text and attention-grabbing fact boxes hold the attention of even the most reluctant readers. The convenient page layout also includes colorful photographs paired with succinct, easy-to-digest captions. This high-interest volume is sure to engage and excite readers of many levels.

The Future of Human Space Exploration Giovanni

Bignami, Andrea Sommariva, 2016-07-06 For several decades it has been widely accepted that human space exploration is the exclusive domain of government agencies. The cost of performing such missions, estimated in multiple reports to amount to hundreds of billions dollars over decades, was far beyond what private entities could afford. That arrangement seems to be changing. Buoyed by the success of its program to develop commercial cargo capabilities to support the International Space Station, NASA is becoming increasingly open to working with the private sector in its human space exploration plans. The new private-public partnership will make 'planet hopping' feasible. This book analyses the move towards planet hopping, which sees human outposts moving across the planetary dimensions, from the Moon to Near-Earth Asteroids and Mars. It critically assesses the intention to exploit space resources and how successful these missions will be for humanity. This insightful and accessible book will be of great interest to scholars and students of space policy and politics, international studies, and science and technology studies.

Remembering the Space Age Steven Dick, 2009-11-18 This volume is nearly 500 pages and topics covered include: Gigantic Follies? Human Exploration and the Space Age in Long-term Historical Perspective; National Aspirations on a Global Stage: Fifty Years of Spaceflight; Building Space Capability through European Regional Collaboration; Imagining an Aerospace Agency in the Atomic Age; Creating a Memory of the German Rocket Program for the Cold War; Operation Paperclip in Huntsville, Alabama;

The Great Leap Upward: China's Human Spaceflight Program and Chinese National Identity; The Right Stuff: The Reagan Revolution and the U.S. Space Program; Great (Unfulfilled) Expectations: To Boldly Go Where No Social Scientist and Historian Have Gone Before; Far Out: The Space Age in American Culture; A Second Nature Rising: Spaceflight in an Era of Representation; Creating Memories: Myth, Identity, and Culture in the Russian Space Age; The Music of Memory and Forgetting: Global Echoes of Sputnik 2; From the Cradle to the Grave: Cosmonaut Nostalgia in Soviet and Post-Soviet Film; Discovering the Iconic in Space Exploration Photography; Robert A. Heinlein's Influence on Spaceflight; American Spaceflight History's Master Narrative and the Meaning of Memory; A Melancholic Space Age Anniversary; Has Space Development Made a Difference?; Has There Been a Space Age?; and Cultural Functions of Space Exploration. Concepts of Space Max Jammer, 1954 Historical surveys of the concept of space considers Judeo-Christian ideas about space, Newton's concept of absolute space, space from 18th century to the present. Numerous original quotations and bibliographical references. Admirably compact and swiftly paced style. – Philosophy of Science. Foreword by Albert Einstein.

Space Flight Lance K. Erickson, 2010 This book offers a comprehensive look at the history of space exploration, the technology that makes it possible, and the continued efforts that promise to carry us into the future. It goes through the

history of space exploration, from the earliest sub-orbital and orbital missions to today's deep-space probes, to provide a close look at past and present projects, then turns its attention to programs being planned today and to the significance of future exploration. Both the novice and the advanced student of space exploration stand to profit from the author's engaging and insightful discussion.
