On tetra, Alana is unstoppable—an explosive blur as she surges through New York City. But with the clock ticking down to her eighteenth birthday, Alana will soon be too old for the rush . . . when just one more dose will prove deadly. Supported only by her steady handler, Tucker, Alana goes undercover, infiltrating an elite gang of breaknecks to stop their supply of the drug. But when Alana gets trapped on the wrong side of the law, she learns the breaknecks are not quite what they seem—especially Ethan, the boy who seems to see the truth inside her. *China's High-Speed Rail Development* Martha Lawrence,Richard Bullock,Ziming Liu,2019-06-24 Over the past decade, China has built 25,000 km of dedicated highspeed railway—more than the rest of the world combined. What can we learn from this remarkable experience? China's High-Speed Rail Development examines the Chinese experience to draw lessons for countries considering investing in high-speed rail. The report scrutinizes the planning and delivery mechanisms that enabled the rapid construction of the high-speed rail system. It highlights the role of long-term planning, consistent plan execution, and a joint venture structure that ensures active participation of provincial and local governments in project planning and financing. Traffic on China's high-speed trains has grown to 1.7 billion passengers a year. The study examines the characteristics of the markets for which high-speed rail is competitive in China. It discusses the pricing and service design considerations that go into making high-speed rail services competitive with other modes and factors such as good urban connectivity that make the service attractive to customers. One of the most remarkable aspects of the Chinese experience is the rapid pace of high-quality construction. The report looks at the role of strong capacity development within and cooperation among China Railway Corporation, rail manufacturers, universities, research institutions, laboratories, and engineering centers that allowed for rapid technological advancement and localization of technology. It describes the project delivery structures and incentives for delivering quality and timely results. Finally, the report analyzes the financial and economic sustainability of the investment in high-speed rail. It finds that a developing country can price high-speed rail services affordably and still achieve financial viability, but this requires very high passenger density. Economic viability similarly depends on high passenger density.
