From the Web to the Grid and Beyond René Brun,Frederico Carminati,Giuliana Galli-Carminati,2012-01-26 Born after World War II, large-scale experimental high-energy physics (HEP) has found itself limited ever since by available accelerator, detector and computing technologies. Accordingly, HEP has made significant contributions to the development of these fields, more often than not driving their innovations. The invention of the World Wide Web at CERN is merely the best-known example out of many. This book is the first comprehensive account to trace the history of this pioneering spirit in the field of computing technologies. It covers everything up to and including the present-day handling of the huge demands imposed upon grid and distributed computing by full-scale LHC operations—operations which have for years involved many thousands of collaborating members worldwide and accordingly provide the original and natural testbed for grid computing concepts. This book takes the reader on a guided tour encompassing all relevant topics, including programming languages, software engineering, large databases, the Web, and grid- and cloud computing. The important issue of intellectual property regulations for distributed software engineering and computing is also addressed. Aptly, the book closes with a visionary chapter of what may lie ahead. Approachable and requiring only basic understanding of physics and computer sciences, this book is intended for both education and research.

How the Web was Born James Gillies, R. Cailliau, 2000 Two Web insiders who were employees of CERN in Geneva, where the Web was developed, tell how the idea for the World Wide Web came about, how it was developed, and how it was eventually handed over at no charge for the rest of the world to use. 20 illustrations.

Computational Linguistics and Intelligent Text Processing Alexander Gelbukh, 2008-02-10 CICLing 2008 (www.CICLing.org) was the 9th Annual Conference on Intelligent Text Processing and Computational Linguistics. The CICLing conferences are intended to provide a wide-scope forum for the discussion of both the art and craft of natural language processing research and the best practices in its applications. This volume contains the papers accepted for oral presentation at the conference, as well as several of the best papers accepted for poster presentation. Other papers accepted for poster presentation were republished in special issues of other journals (see the information on the website). Since 2001 the CICLing proceedings have been published in Springer's Lecture Notes in Computer Science series, as volumes 2004, 2276, 2588, 2945, 3406, 3878, and 4394. The book consists of 12 sections, representative of the main tasks and applications of Natural Language Processing: - Language resources - Morphology and syntax - Semantics and discourse - Word sense disambiguation and named entity recognition - Anaphora and co-reference - Machine translation and parallel corpora - Natural language generation - Speech recognition - Information retrieval and question answering - Text classification - Text summarization - Spell checking and authoring aid A total of 204 papers by 438 authors from 39 countries were submitted for evaluation (see Tables 1 and 2). Each submission was reviewed by at least two independent Program Committee members. This volume contains revised versions of 52 papers by 129 authors from 24 countries selected for inclusion in the conference program (the acceptance rate was 25.5%).
