Leslie Zebrowitz

Reading Faces Leslie Zebrowitz, 2018-02-12 Do we read character in faces? What information do faces actually provide? What are the social and psychological consequences of reading character in faces? Zebrowitz unmask the face and provides the first systematic, scientific account of our tendency to judge people by their appearance. Offering an in-depth discussion of two appearance qualities that influence our impressions of others—"baby-faceness" and "attractiveness"—and an analysis of these impressions, Zebrowitz has written an accessible and valuable book for professionals and general readers alike.

About Faces Terry Landau, 1989 The human face is one of the most fascinating of all images: powerful, purposeful, personal.

Social and Applied Aspects of Perceiving Faces Thomas R. Alley, 2013-05-13 This interdisciplinary overview integrates a variety of perspectives on the process and interpretation of faces as a major source of verbal and nonverbal communication. Written by authors from social, experimental, and cognitive psychology as well as from the dental sciences, *Social and Applied Aspects of Perceiving Faces* covers topics including normal variation in facial appearance and facial anomalies.

Recognising Faces Vicki Bruce, 2017-03-31 Each of us is able to recognise the faces of many hundreds if not thousands of people known to us. We recognise faces despite seeing them in different views and with changing expressions. From these varying patterns we somehow extract the invariant characteristics of an individual's face, and usually remember why a face seems familiar, recalling where we know the person from and what they are called. In this book, originally published in 1988, the author describes the progress which has been made by psychologists towards understanding these perceptual and cognitive processes, and points to theoretical directions which may prove important in the future. Though emphasising theory, the book also addresses practical problems of eyewitness testimony, and discusses the relationship between recognising faces, and other aspects of face processing such as perceiving expressions and lipreading. The book was aimed primarily at a research audience, but would also interest advanced undergraduate students in vision and cognition.

Computer recognition of human faces KANADE, 2013-12-01 Picture processing by computer has found its application in various fields. Character recognition has shown the most practical success. Furthermore, the techniques span much more sophisticated applications such as interpretation of biomedical images and X-ray films, measurement of images in nuclear physics, processing of a large volume of pictorial data sent from the satellites, etc. The particular problem attacked in this thesis is computer analysis and identification of human faces. Pictures of human faces are successfully analyzed by a computer program which extracts face feature points, such as nose, mouth, eyes, and so on. The program was tested with more than 800 photographs. The research has been done with main emphasis on the method of how to incorporate the picture structures into the picture analysis program. The success of the program is due to the employment of a flexible picture analysis scheme with feedbacks, which will be described in the next chapter. An experiment on face identification of 20 people was also conducted. I-1. Picture Analysis and Recognition- New Aspects When shown the pictures of the human face of Fig.

1-1, we can immediately tell the positions of the nose, mouth and eyes; and more- over, we can say that both pictures surely portray the same person. Picture analysis and recognition by computer concerns itself with this type of two-dimensional image processing. In this thesis, I selected human-face pictures as objects of processing.

FACES: Photography and the Art of Portraiture Paul Fuqua, Steven Biver, 2013-05-02 There is so much detail to be captured in a face. Cicero (106-43 BC) said: The face is a picture of the mind as the eyes are its interpreter. To capture a person's personality, there are many things to keep in mind, and the authors of FACES show us how to match up a personality with lighting, posing, and composition. Portraiture is truly an art, and this book dives deep into the details so that you end up with a gorgeous portrait that both you and your subject love. Not only is this book the most comprehensive title available on portraiture, but it contains stunning images. Each image is paired with a lighting diagram, a description of why the type of image was chosen, and then takes you through postproduction to put the finishing touches on. The authors also showcase a gallery of portraits by renowned photographers.

Reading Faces and Bodies: Behavioural and Neural Processes Underlying the Understanding of, and Interaction with, Others Paola Ricciardelli, Andrew P. Bayliss, Rossana Actis-Grosso, 2017-04-27 The aim of this Research Topic was to offer an interdisciplinary forum for researchers interested in the interplay of face, eye gaze, and body perception in the understanding of others, with an emphasis on behavioural and neural processing. The papers included in this topic come from cognitive, neuroscience and social psychology perspectives and shed new light on how facial and body cues interact with each other and with social, ecological and contextual factors (such as for example social identification and group membership) to form a unified representation that can guide our perceptions and responses to other people. Altogether, they provide an up-to-date picture of advances in this fascinating research field.

Faces in the Brain - a Behavioral, Eye-tracking and High-level Adaptation Approach to Human Face Perception Regine G. M. Armann, 2011

Faces of the World , 2007-06 A lifetime project, this book contains vivid, eye-catching photographs of the many friends that Al Sadpour has made during his over thirty years of traveling the globe, at times to its most remote areas. Influenced by the inimitable Yousuf Karsh, Al has adopted his mentor's philosophy of focusing on those great in heart, mind and spirit, be they famous or humble. Photographed in their own environments, the very human subjects here reflect extreme diversity in ages and ethnic backgrounds -- yet a common theme runs through each of the pictures: the uniqueness of the Human Face.

Cognitive and Computational Aspects of Face Recognition Tim

Valentine, 2017-04-07 How can computers recognize faces? Why are caricatures of famous faces so easily recognized? Originally published in 1995, much of the previous research on face recognition had been phenomena driven. Recent empirical work together with the application of computational, mathematical and statistical techniques have provided new ways of conceptualizing the

information available in faces. These advances have led researchers to suggest that many phenomena can be explained by the structure of the information available in the population(s) of faces. This broad approach has drawn together a number of apparently disparate phenomena with a common theoretical basis, including cross-race recognition; the distinctiveness of faces; the production and recognition of caricatures; and the determinants of facial attractiveness. This title provides a state of the art review of the field at the time in which the authors use a wide variety of approaches. What is common to all is that the authors base the accounts of the phenomena they study or their model of face recognition on the statistics of the information available in the population of faces. On publication this title was a comprehensive, up-to-date review of an important area of research in face recognition written by active researchers. It includes contributions from mathematics, computer science and neural network theory as well as psychology. It is aimed at research workers and postgraduate students and will be of interest to cognitive psychologists and computer scientists interested in face recognition. It will also be of interest to those working on neural network models of visual recognition, perceptual development, expertise in visual cognition as well as facial attractiveness and caricature.

Analysis and Modelling of Faces and Gestures Shaogang Gong, 2005-10-04 This book constitutes the refereed proceedings of the Second International Workshop on Analysis and Modelling of Faces and Gestures, AMFG 2005, held in Beijing, China in October 2005 within the scope of ICCV 2005, the International Conference on Computer Vision. The 30 revised full papers presented together with 2 invited papers were carefully reviewed and selected from 90 submissions. The papers give a survey of the status of recognition, analysis and modeling of face and gesture. The topics of these papers range from feature representation, robust recognition, learning, 3D modeling, to psychology.

Good News - Bad News: The Two Faces of Immune Privilege Rachel R. Caspi, Joan Stein-Streilein, 2014-11-19 Immune privilege was once thought to be the property of a few select sites that include the eye, brain, testis, pregnant uterus and (of all things) the hamster cheek pouch, and was believed to be mainly based on sequestration behind blood-tissue barriers. This view has changed. Immune privilege is now considered to constitute a more general phenomenon through which tissues are able to actively direct and control immune responses taking place in their "territory" to preserve their structural and functional integrity in the face of inflammatory processes. These positive aspects of immune privilege can be hijacked by tumors to their survival advantage and to the detriment of the host. This Research Topic dissects the beneficial and deleterious consequences of immune privilege in terms of the cellular and molecular mechanisms that various tissues and tumors use, each in its own fashion, to regulate immune processes that affect them, at the local and the systemic level.

Perception of Faces, Objects, and Scenes Mary A. Peterson, Gillian Rhodes, 2003-05-22 From a barrage of photons, we readily and effortlessly recognize the faces of our friends, and the familiar objects and scenes around us. However, these tasks cannot be simple for our visual systems-- faces are all extremely similar as visual patterns, and objects look quite different when viewed from different viewpoints. How do our visual systems

solve these problems? The contributors to this volume seek to answer this question by exploring how analytic and holistic processes contribute to our perception of faces, objects, and scenes. The role of parts and wholes in perception has been studied for a century, beginning with the debate between Structuralists, who championed the role of elements, and Gestalt psychologists, who argued that the whole was different from the sum of its parts. This is the first volume to focus on the current state of the debate on parts versus wholes as it exists in the field of visual perception by bringing together the views of the leading researchers. Too frequently, researchers work in only one domain, so they are unaware of the ways in which holistic and analytic processing are defined in different areas. The contributors to this volume ask what analytic and holistic processes are like; whether they contribute differently to the perception of faces, objects, and scenes; whether different cognitive and neural mechanisms code holistic and analytic information; whether a single, universal system can be sufficient for visual-information processing, and whether our subjective experience of holistic perception might be nothing more than a compelling illusion. The result is a snapshot of the current thinking on how the processing of wholes and parts contributes to our remarkable ability to recognize faces, objects, and scenes, and an illustration of the diverse conceptions of analytic and holistic processing that currently coexist, and the variety of approaches that have been brought to bear on the issues.

Perceiving Talking Faces Dominic W. Massaro, 1998 This book discusses the author's experiments on the use of multiple cues in speech perception and other areas and unifies the results through a logical model of perception.
