The Basis Problem for Modular Forms on $\Gamma_0(N)$ Hiroaki Hijikata,Arnold K. Pizer,Thomas R. Shemanske,1989 The basis problem" for modular forms (of degree one) is to find a basis for a space of modular forms with elements whose Fourier coefficients can be computed explicitly. The authors give a general treatment for all cases. The main idea in the solution is to consider two kinds of forms: theta series associated with special order, and bases of primitive neben space.

Introduction to Hamiltonian Dynamical Systems and the N-Body Problem Kenneth R. Meyer,Daniel C. Offin,2017-05-04 This third edition text provides expanded material on the restricted three body problem and celestial mechanics. With each chapter containing new content, readers are provided with new material on reduction, orbifolds, and the regularization of the Kepler problem, all of which are provided with applications. The previous editions grew out of graduate level courses in mathematics, engineering, and physics given at several different universities. The courses took students who had some background in differential equations and lead them through a systematic grounding in the theory of Hamiltonian mechanics from a dynamical systems point of view. This text provides a mathematical structure of celestial mechanics ideal for beginners, and will be useful to graduate students and researchers alike. Reviews of the second edition: The primary subject here is the basic theory of Hamiltonian differential equations studied from the perspective of differential dynamical systems. The N-body problem is used as the primary example of a Hamiltonian system, a touchstone for the theory as the authors develop it. This book is intended to support a first course at the graduate level for mathematics and engineering students. ... It is a well-organized and accessible introduction to the subject This is an attractive book (William J. Satzer, The Mathematical Association of America, March, 2009) "The second edition of this text infuses new mathematical substance and relevance into an already modern classic ... and is sure to excite future generations of readers. ... This outstanding book can be used not only as an introductory course at the graduate level in mathematics, but also as course material for engineering graduate students. ... it is an elegant and invaluable reference for mathematicians and scientists with an interest in classical and celestial mechanics, astrodynamics, physics, biology, and related fields." (Marian Gidea, Mathematical Reviews, Issue 2010 d)

N-Heterocyclic Carbenes in Organocatalysis Akkattu T. Biju,2019-01-07 Summarizing the emerging field of N-heterocyclic carbenes used in organocatalysis, this is an excellent overview of the synthesis and applications of NHCs focusing on carbon-carbon and carbon-heteroatom bond formation. Alongside comprehensive coverage of the synthesis, characteristics and applications, this handbook and ready reference also includes chapters on NHCs for polymerization reactions and natural product synthesis.

The Phoebe A. Hearst Expedition to Naga ed-Deir, Cemeteries N 2000 and N 2500 Vanessa Davies,2020-11-16 The Phoebe A. Hearst Expedition to Naga ed-Deir, Cemeteries N 2000 and N 2500 presents the results of excavations directed by George A. Reisner and led by Arthur C. Mace. The site of Naga ed-Deir, Egypt, is unusual for its continued use over a long period of time (c. 3500 BCE–650 CE). Burials in N 2000 and N 2500 date to the First Intermediate Period/Middle Kingdom and the Coptic era. In keeping with Reisner's earlier publications of Naga ed-Deir, this volume presents artifacts in chapter-length studies devoted to a particular object type and includes a burial-by-burial description. The excavators' original drawings, notes, and photographs are complemented by a contemporary analysis of the objects by experts in their subfields.

Three-way n-valued neutrosophic concept lattice at different granulation Prem Kumar Singh, In recent year, the mathematics of three-way fuzzy concept lattice is introduced to characterize the attributes based on its acceptance, rejection and uncertain part. One of the suitable example is descriptive analysis of opinion of people in a democratic country. This became complex for the country like India where opinion (i.e. vote) of people to choose the particular leader is based on 29 independent states and their distinct issues. Adequate analysis of these type of 29-valued data based on its acceptance, rejection and uncertain part is major issue for the government and private agencies. To resolve this issue current paper introduces n-valued neutrosophic context and its graphical structure visualization for descriptive analysis. In the same time another method is proposed to some of the similar three-way n-valued concepts. To zoom in and zoom out the n-valued neutrosophic context at user required information granules with an illustrative example.

The (p,n) Reaction and the Nucleon-Nucleon Force Charles D. Goodman, 2012-12-06 This volume contains the proceedings of the Conference on the (p,n) Reaction and the Nucleon-Nucleon Force held in Telluride, Colorado, March 29-31, 1979. The idea to hold this conference grew out of a program at the Indiana University Cyclotron Facility to study the (p,n) reaction in the 50-200 MeV energy range. The first new Indiana data, in contrast to low energy data, showed features suggestive of a dominant one pion exchange interaction. It seemed desirable to review what was known about the free and the effective nucleon-nucleon force and the connection between the low and high energy (p,n) data. Thus the conference was born. The following people served as the organizing committee: S. M. Austin, Michigan State University W. Bertozzi, Massachusetts Institute of Technology S. D. Bloom, Lawrence Livermore Laboratory C. C. Foster, Indiana University C. D. Goodman, Oak Ridge National Laboratory (Conference Chairman) D. A. Lind, University of Colorado J. Rapaport, Ohio University G. R. Satchler, Oak Ridge National Laboratory G. E. Walker, Indiana University R. L. Walter, Duke University and TUNL The sponsoring organizations were: Indiana University, Bloomington, Indiana University of Colorado, Boulder, Colorado Oak Ridge National Laboratory, Oak Ridge, Tennessee Triangle Universities Nuclear Laboratory, Durham, North Carolina Of course, the major credit for the success of the conference must go to the speakers who diligently prepared their talks that are reproduced in this volume.

Kotarba, 2013 Based on 18 years of sociological research and 52 years of rock 'n' roll fandom, *Baby Boomer Rock 'n' Roll Fans: The Music Never Ends* draws on data collected from participant observations and interviews with artists, fans, and producers to explore our aging rock culture through the filter of symbolic interactionist theory.

New Strategies for N-Heterocyclic Carbenes Catalyzed Annulations Xiangyu Chen, 2016-12-20 This thesis focuses on NHC-catalyzed annulation of nitroalkenes, enals and α,β -unsaturated carboxylic acids. (1) NHCs were found to be efficient catalysts for the [4+2] annulation of β -substituted nitroalkenes. The scope of Rauhut-Currier reaction was successfully extended to the most challenging β -substituted alkenes by this method; (2) Enals were successfully used for [4+2] annulations with azodicarboxylates catalyzed by NHC via γ -addition. Highly enantiopure tetrahydropyridazinones and γ -amino acid derivatives could be easily prepared by subsequent transformations of the resulting dihydropyridazinones. (4) The readily available α,β -unsaturated carboxylic acids were first successfully employed to generate the α,β -unsaturated acyl azolium intermediates by using NHC for the enantioselective [3+2] and [3+3] annulations.

N-harmonic Mappings Between Annuli Tadeusz Iwaniec, Jani Onninen, 2012 The central theme of this paper is the variational analysis of homeomorphisms $\mathbb{X} \xrightarrow{\text{onto}} \mathbb{Y}$ between two given domains $\mathbb{X}, \mathbb{Y} \subset \mathbb{R}^n$. The authors look for the extremal mappings in the Sobolev space $W^{1,n}(\mathbb{X})$.

$X\}, \{\mathbb{Y}\})$ which minimize the energy integral $\int_{\mathbb{X}} |\nabla u|^2 dx$. Because of the natural connections with quasiconformal mappings this n -harmonic alternative to the classical Dirichlet integral (for planar domains) has drawn the attention of researchers in Geometric Function Theory. Explicit analysis is made here for a pair of concentric spherical annuli where many unexpected phenomena about minimal n -harmonic mappings are observed. The underlying integration of nonlinear differential forms, called free Lagrangians, becomes truly a work of art.
