Solar-Pumped Lasers Dawei Liang,Joana Almeida,Cláudia Vistas,Bruno Tibúrcio,Dário Garcia,2023-05-01 This textbook is a comprehensive review of many different areas in solar-pumped lasers design and characterization. It enables readers to develop their skills in general solid-state laser design and solar collector design and provides numerous solved exercises at the end of each

chapter to further this development. This book begins by introducing the brief history of solar-pumped laser and its potential applications. It explains the basic theories of imaging and non-imaging primary, secondary, and tertiary solar concentrators. It discusses solar-pumped solid-state laser theory and solar-to-laser power conversion efficiencies. There are chapters dedicated to ZEMAX and LASCAD numerical simulation tools, to help develop readers' skills in innovative solid-state laser design. This book is one of the first books to relate concentrated solar energy technologies to solid-state laser technologies and is therefore of interest to students, academics, engineers, and laser and optical system designers.

**A Comparison of Predicted and Measured Inlet Distortion Flows in a Subsonic Axial Inlet Flow Compressor Rotor ,1992**

Detailed flow measurements were taken inside an isolated axial compressor rotor operating subsonically near peak efficiency. These Laser Anemometer measurements were made with two inlet velocity profiles. One profile consisted of an unmodified baseline

flow, and the second profile was distorted by placing axisymmetric screens on the hub and shroud well upstream of the rotor. A detailed comparison in the rotor relative reference frame between a Navier-Stokes solver and the measured experimental results showed good agreement between the predicted and measured flows. A primary flow is defined in the rotor and deviations from this primary flow for each inlet flow condition are identified. A comparison between the two flow deviations and the computed predictions is made to assess the development of a passage vortex due to the distortion of the inlet flow. Computed predictions indicate that a distorted inlet profile has a minimal effect on the development of the flow in the rotor passage and the resulting passage vortex ... **Basic Management Accounting for the Hospitality Industry**

Michael Chibili,2019-11-26 Basic Management Accounting for the Hospitality Industry uses a step by step approach to enable

students to independently master the field. This second edition contains many new themes and developments, including: the essence of the International Financial Reporting Standards (IFRS) integration of the changes caused by the evolution of the Uniform System of Accounts for the Lodging Industry (USALI) the extension of price elasticity of demand, and addition of income and cross elasticities the addition of break-even time (BET) as an additional method of analysing capital investments Up-to-date and comprehensive coverage, this textbook is essential reading for hospitality management students. ### Measuring Climate Change to Inform Energy Transitions

Sunny E. Iyuke, 2024-03-12 Measuring Climate Change to Inform Energy Transitions A useful assessment tool to inform energy transition decisions in view of climate change Climate change is without question the greatest global challenge of the twenty-first century. Among its many aspects is the need for energy transitions worldwide, as sustainable energy infrastructure must be rapidly created if the world is to forestall climate catastrophe. Methods for measuring CO<sub>2</sub> concentration and other factors producing climate change will be critical to managing this transition and assessing its

early impacts. Measuring Climate Change to Inform Energy Transitions proposes a method for measuring sinusoidal gradients of increasing temperatures and CO<sub>2</sub> concentration in order to determine the ongoing impact of global warming and make recommendations. This method will be critical in informing key decisions as the energy transition proceeds. It is a must-read for academic, professional, and policy stakeholders looking to meet these challenges head-on. Readers will also find: Concrete models and mechanisms for effecting energy transition Detailed discussion of topics including vegetative sinks for carbon capture, power reforms from coal, carbon footprint of internal combustion engines, skills required for green jobs and many more Examples and case studies to supplement quantitative analyses This book is ideal for professionals, undergraduate and graduate students, and researchers in the energy, environmental, government, and engineering fields.

Durakbasa,M. Güneş, Gençyılmaz,2020-10-25 This book presents the proceedings from the International Symposium for Production Research 2020. The cross-disciplinary papers presented draw on research from academics and practitioners from industrial engineering, management engineering, operational research, and production/operational management. It explores topics including: computer-aided manufacturing; Industry 4.0 applications; simulation and modeling big data and analytics; flexible manufacturing systems; decision analysis quality management industrial robotics in production systems information technologies in production management; and optimization techniques. Presenting real-life applications, case studies, and mathematical models, this book is of interest to researchers, academics, and practitioners in the field of production and operation engineering.
