Austin to ATX Joe Nick Patoski, 2019-01-23 In this gonzo history of the “City of the Violet Crown,” author and journalist Joe Nick Patoski chronicles the modern evolution of the quirky, bustling, funky, self-contradictory place known as Austin, Texas. Patoski describes the series of cosmic accidents that tossed together a mashup of outsiders, free spirits, thinkers, educators, writers, musicians, entrepreneurs, artists, and politicians who would foster the atmosphere, the vibe, the slightly off-kilter zeitgeist that allowed Austin to become the home of both Armadillo World Headquarters and Dell Technologies. Patoski’s raucous, rollicking romp through Austin’s recent past and hipster present connects the dots that lead from places like Scholz Garten—Texas’ oldest continuously operating business—to places like the Armadillo, where Willie Nelson and Darrell Royal brought hippies and rednecks together around music. He shows how misfits like William Sydney Porter—the embezzler who became famous under his pen name, O. Henry—served as precursors for iconoclasts like J. Frank Dobie, Bud Shrake, and Molly Ivins. He describes the journey, beginning with the search for an old girlfriend, that eventually brought Louis Black, Nick Barbaro, and Roland Swenson to the founding of the South by Southwest music, film, and technology festival. As one Austinite, who in typical fashion is simultaneously pursuing degrees in medicine and cinematography, says, “Austin is very different from the rest of Texas.” Many readers of Austin to ATX will have already realized that. Now they will know why.

Trace Lauret Savoy, 2016-09-13 With a New Preface by the Author Through personal journeys and historical inquiry, this PEN Literary Award finalist explores how America’s still unfolding history and ideas of “race” have marked its people and the land. Sand and stone are Earth’s fragmented memory. Each of us, too, is a landscape inscribed by memory and loss. One life-defining lesson Lauret Savoy learned as a young girl was this: the American land did not hate. As an educator and Earth historian, she has tracked the continent’s past from the relics of deep time; but the paths of ancestors toward her—paths of free and enslaved Africans, colonists from Europe, and peoples indigenous to this land—lie largely eroded and lost. A provocative and powerful mosaic that ranges across a continent and across time, from twisted terrain within the San Andreas Fault zone to a South Carolina plantation, from national parks to burial grounds, from “Indian Territory” and the U.S.–Mexico Border to the U.S. capital, Trace grapples with a searing national history to reveal the often unvoiced presence of the past. In distinctive and illuminating prose that is attentive to the rhythms of language and landscapes, she weaves together human stories of migration, silence, and displacement, as epic as the continent they survey, with uplifted mountains, braided streams, and eroded canyons. Gifted with this manifold vision, and graced by a scientific and lyrical diligence, she delves through fragmented histories—natural, personal, cultural—to find shadowy outlines of other stories of place in America. Every landscape is an

accumulation, reads one epigraph. Life must be lived amidst that which was made before. Courageously and masterfully, Lauret Savoy does so in this beautiful book: she lives there, making sense of this land and its troubled past, reconciling what it means to inhabit terrains of memory—and to be one.

Bioactive Lipid Mediators Takehiko Yokomizo,Makoto Murakami,2015-10-27 This book summarizes the most recent progress in the studies of lipid mediators from the molecular to clinical level and introduces newly created tools for analysis including imaging mass spectrometry. Comprising 29 chapters divided into four major parts, the book describes the molecular natures of enzymes, transporters, and receptors for lipid mediators (Part I), the function of lipid mediators in Drosophila and Zebrafish (Part II), the relationships between lipid mediators and various diseases (Part III), and detailed procedures of extraction, preparation, and quantification of lipid mediators (Part IV). Research on lipid mediators initially started with analysis of the action of aspirin, and subsequent biochemical experiments identified many enzymes and receptors responsible for the biosynthesis and signal transduction of individual lipid mediators. Through the phenotypic analyses of transgenic and knockout mice, it has been shown that the dysregulation of some lipid mediators causes inflammatory, immune, or oncogenic disorders. Lipid mediators have attracted increased attention because their structures are conserved among different species, and their biosynthetic and signaling pathways have been deciphered at the molecular level. Many drugs that target lipid mediators are already being used in hospitals, and this book suggests further possibilities for development of a wide variety of such drugs. Very recently, highly sensitive mass spectrometry has begun to be used to identify novel lipid mediators that are present only in trace amounts in tissues but with robust biological activity. Written by international experts, this book provides readers a comprehensive view of lipid mediators and related topics and helps in the process of determining research targets for the near future.
