Conversations with Bunuel Max Aub, 2017-04-18 This book features extended conversations with Spanish filmmaker Luis Bunuel (1900-1983) and interviews with his family members, friends and colleagues—including Salvador Dali, Louis Aragon and Fernando Rey—conducted by Max Aub in the late 1960s and early 1970s. Notorious for inventing fanciful versions of his life and his creative output, Bunuel was hard put to deceive the astute Max Aub, who shared Bunuel's background in Spain, in Paris during the Spanish Civil War, and in Mexico, where they were friends and collaborators. Originally published in Spain in 1985, this translated (the first in English) and expanded edition (with several significant interviews and a detailed index not found in the original) provides a detailed picture of Bunuel's life and art. Extensive notes contextualize the conversations and acknowledge the discoveries of recent studies on Bunuel.

Advances and Applications of DSMT for Information Fusion (Collected Works. Volume 5) Florentin Smarandache, Jean Dezert, Albena Tchamova, 2023-12-27 This fifth volume on *Advances and Applications of DSMT for Information Fusion* collects theoretical and applied contributions of researchers working in different fields of applications and in mathematics, and is available in open-access. The collected contributions of this volume have either been published or presented after disseminating the fourth volume in 2015 (available at fs.unm.edu/DSMT-book4.pdf or www.onera.fr/sites/default/files/297/2015-DSMT-Book4.pdf) in international conferences, seminars, workshops and journals, or they are new. The contributions of each part of this volume are chronologically ordered. First Part of this book presents some theoretical advances on DSMT, dealing mainly with modified Proportional Conflict Redistribution Rules (PCR) of combination with degree of intersection, coarsening techniques, interval calculus for PCR thanks to set inversion via interval analysis (SIVIA), rough set classifiers, canonical decomposition of dichotomous belief functions, fast PCR fusion, fast inter-criteria analysis with PCR, and improved PCR5 and PCR6 rules preserving the (quasi-)neutrality of (quasi-)vacuous belief assignment in the fusion of sources of evidence with their Matlab codes. Because more applications of DSMT have emerged in the past years since the apparition of the fourth book of DSMT in 2015, the second part of this volume is about selected applications of DSMT mainly in building change detection, object recognition, quality of data association in tracking, perception in robotics, risk assessment for torrent protection and multi-criteria decision-making, multi-modal image fusion, coarsening techniques, recommender system, levee characterization and assessment, human heading perception, trust assessment, robotics, biometrics, failure detection, GPS systems, inter-criteria analysis, group decision, human activity recognition, storm prediction, data association for autonomous vehicles, identification of maritime vessels, fusion of support vector machines (SVM), Silx-Furtif RUST code library for information fusion including PCR rules, and network for ship classification. Finally, the third part presents interesting contributions related to belief functions in general published or presented along the years since 2015. These contributions are related with decision-making under uncertainty, belief approximations, probability transformations, new distances between belief functions, non-classical multi-criteria decision-making problems with belief functions, generalization of Bayes theorem, image processing, data association, entropy and cross-entropy measures, fuzzy evidence numbers, negator of belief mass, human activity recognition, information fusion for breast cancer therapy, imbalanced data classification, and hybrid techniques mixing deep learning with belief functions as well. We want to thank all the contributors of this fifth volume for their research works and their interests in the development of DSMT, and the belief functions. We are grateful as well to other colleagues for encouraging us to edit this fifth volume, and for sharing with us several ideas and for

their questions and comments on DSMT through the years. We thank the International Society of Information Fusion (www.isif.org) for diffusing main research works related to information fusion (including DSMT) in the international fusion conferences series over the years. Florentin Smarandache is grateful to The University of New Mexico, U.S.A., that many times partially sponsored him to attend international conferences, workshops and seminars on Information Fusion. Jean Dezert is grateful to the Department of Information Processing and Systems (DTIS) of the French Aerospace Lab (Office National d'Études et de Recherches Aérospatiales), Palaiseau, France, for encouraging him to carry on this research and for its financial support. Albena Tchamova is first of all grateful to Dr. Jean Dezert for the opportunity to be involved during more than 20 years to follow and share his smart and beautiful visions and ideas in the development of the powerful Dezert-Smarandache Theory for data fusion. She is also grateful to the Institute of Information and Communication Technologies, Bulgarian Academy of Sciences, for sponsoring her to attend international conferences on Information Fusion.

High-Utility Pattern Mining Philippe Fournier-Viger, Jerry Chun-Wei Lin, Roger Nkambou, Bay Vo, Vincent S. Tseng, 2019-01-18 This book presents an overview of techniques for discovering high-utility patterns (patterns with a high importance) in data. It introduces the main types of high-utility patterns, as well as the theory and core algorithms for high-utility pattern mining, and describes recent advances, applications, open-source software, and research opportunities. It also discusses several types of discrete data, including customer transaction data and sequential data. The book consists of twelve chapters, seven of which are surveys presenting the main subfields of high-utility pattern mining, including itemset mining, sequential pattern mining, big data pattern mining, metaheuristic-based approaches, privacy-preserving pattern mining, and pattern visualization. The remaining five chapters describe key techniques and applications, such as discovering concise representations and regular patterns.

Field of Honour Max Aub, 2009-09-07 A contemporary of Lorca and Buñuel in Spain's Second Republic, Max Aub escaped into a life of exile after General Franco seized Barcelona. His masterpiece, acknowledged in Spain as one of the best accounts of the Spanish Civil War, is the five-novel cycle known as *The Magic Labyrinth*—never before translated into English. A playwright as well as a novelist, he brings the period alive through vibrant dialogue and a story that navigates the factional intrigues that eventually erupted onto the streets in violence. The protagonist of the first novel is Rafael López Serrador, whose coming of age in Barcelona introduces a cast from all walks of city life—Catalan nationalists, anarchists, Falangists, government ministers and showgirls. Just as central a character is Barcelona itself, lovingly depicted. Rafael's adventures bring him into contact with the forces that were to destroy the Republic and determine the bloody course of the Spanish Civil War. Masterfully translated by Gerald Martin, author of *Gabriel García Márquez: A Life*, Max Aub's novel is set to introduce to an English-speaking audience a classic of Spanish and Latin American literature—an account of the Spanish Civil War to compare with Ernest Hemingway's *For Whom the Bell Tolls*.

American Sheikhs Brian VanDeMark, 2012-01-31 *American Sheikhs* is the story of a great institution—the American University of Beirut (AUB)—and the families who created and fostered it for almost 150 years. Author Brian VanDeMark's vivid narrative includes not only the colorful history of AUB and many memorable episodes in a family saga, but also larger and more important themes. In the story of the efforts of these two families to build a great school with alternating audacity, arrogance, generosity, paternalism, and vision, the author clearly sees an allegory for the larger history of the United States in the Middle East.

Before 1945, AUB's history is largely positive. Despite American nationalism and presumptions of Manifest Destiny, Middle Easterners generally viewed the school as an engine of constructive change and the United States as a benign force in the region. But in the post-World War II era, with the rise of America as a world power, AUB found itself buffeted by the strong winds of nationalist frustration, Zionism and anti-Zionism, and—eventually—Islamic extremism. Middle Easterners became more ambivalent about America's purposes and began to see the university not just as a cradle of learning but also as an agent of undesirable Western interests. This story is full of meaning today. By revealing how and why the Blisses and Dodges both succeeded and failed in their attempts to influence the Middle East, VanDeMark shows how America's outreach to the Middle East can be improved and the vital importance of maintaining good relations between Americans and the Arab world in the new century.

Cisterns Alireza Dehghani-sani, Ali Sayigh, 2022-09-01 *Cisterns: Sustainable Development, Architecture and Energy* was written on beliefs that based on historical evidence and actual findings, Iran is most probably the country where cisterns, or Aub-anbars in Farsi, were first developed and built. Therefore, it is quite natural for the author to name cisterns in the text Aub-anbars, as it has been called for centuries in this country, the translation of the same name having been used in other countries too. Although in some books, journals and papers published out of Iran by foreign and Iranian scholars, the names Cistern or Water Reservoir have been used. The word Aub-anbar is a compound noun in Farsi; Aub means water and Anbar means tank/reservoir. Putting them together gives the noun Aub-anbar and it should be used as one word. People of the region wanting reserved cool water whether in cities or in different locations across the harsh desert during their travel. Queen Zubeida, the wife of Khalifa Haroon Al-Rasheed in 750 AD built one of these cistern closer to the town of Hiyal in Saudi Arabia so that the Pilgrims? Caravans going to Mecca will have cool, fresh water. This book consists of 11-chapters with full analysis, illustrations and photographs. It makes interesting readings to those interested into vernacular architecture, traditional buildings and creative thinking.

Before I Forget Nabil Dajani, 2023-02-03 *Before I Forget* is more of a medley than a memoir. It chronicles the affairs of the American University of Beirut during an understudied period comprising and following the Lebanese civil war. In recording his perception of selective periods in his lifetime the author focuses on his AUB experience and documents his text with email exchanges with university officials. He exposes his personal experience as a student, an administrator and faculty member of AUB during a period that spans over the administration of fourteen presidents (from John Paul Leonard to Fadlo Khuri), several of whom he was closely associated with. During this period, he served in central capacities including: president of the Faculty Association, President of the Worldwide Alumni Association, Assistant Dean and chair of the Senate Steering Committee. In his engaging style the author draws attention to what he considers an association of AUB with US interests. The book also chronicles the difficulties and strivings the author faced since his family was forced to leave his homeland. It discusses the changes the author experienced moving from Lebanon to the US as a foreign student as well as the lifestyle adjustments he had to undergo when returning to Lebanon after graduation.
