Shooter's Bible Guide to Bowhunting Todd A. Kuhn, 2013-08-01 From the most trusted name in guns and ammunition comes this ultimate reference on bowhunting. The Shooter's Bible Guide to Bowhunting offers everything you need to know about the sport and its gear, from its origin as a means of survival to modern gear. Compound bows and crossbows have undergone an explosive rise in popularity in recent years, due in part, Dr. Todd A. Kuhn explains, to complex socioeconomic, environmental, and biological factors. As expansive tracts of land vanish, many hunters can no longer pursue game with high-powered rifles. That, plus vast improvements in archery gear, has hunters flocking to compound bows and crossbows as alternatives. In the Shooter's Bible Guide to Bowhunting Dr. Kuhn examines all things bowhunting and archery. Topics covered include: Compound, recurve, and traditional bows Arrows and broadheads Sights and rests Releases and triggers Quivers Tree stands, blinds, decoys, and other popular gear This exhaustive desk reference provides a never before seen look into the history and engineering of archery, theories and trends in game discipline, and, of course, an exhaustive catalog of archery equipment both new and traditional.

Innovation Trends in Plastics Decoration and Surface Treatment Edward B Crutchley, 2014-08-11 The plastics industry is a major player for consumer items, notably for the automotive, consumer electronics and packaging industries, and is necessarily very active in innovation. As a result, moulded thermoplastics are achieving new heights in decorative appearance and quality. Many striking aesthetic effects are possible by employing new polymer blends coupled with a diverse range of decoration and surface treatment technologies. These can produce three-dimensional and tactile finishes, high definition images, flawless high gloss and metallic surfaces, as well as effects ranging from imitation materials, interferential colours, colour gradients, colour change and travel, gloss and matte combinations, and even acoustic or olfactory effects. Manufacturing processes to achieve these include several types of in-mould film, coating or decorating technique, relatively recent technologies to improve surface quality, as well as traditional separate decorating or coating processes such as dry offset; flexographic; inkjet; pad and screen printing; foil transfer; labelling; laser marking; plating; spray coating; and vacuum deposition. This unique book analyses and compares recent trends in each of over 20 types of mainstream manufacturing process and 10 classes of sensory effect they can produce. Supported by over 100 tables, a 3-year sampling of over 1,000 mentioned patent documents and hundreds of commercial developments helps to identify the main trends and their innovators, key innovative clusters and the most sought-after effects, as well as provide indications for the future.
