**Steven B. Sample**

**Acuity** Kendall Donar, 2016-03-17 Covering a vast array of experiences, contemplations & conversations, Acuity brings the reader behind the eyes of the author. Allowing them to access and assess his perspective; this collection of pieces combine to pursue and reveal that interconnecting thread of humanity which is ever present within us all. I lived this book before I wrote it. All the roads I've traveled from the point I began to walk to present day helped shape and mold me into the man I am today. In writing this book, that truth became more evident than ever before. Ultimately, I was always my Father's Son. There is no higher praise. - Kendall Donar Acuity is Kendall Donar's 1st book of poetry. It is dedicated to both his Father & Mother; Ronald & Linda Donar.

**The Contrarian's Guide to Leadership** Steven B.

Sample, 2003-04-18 In this offbeat approach to leadership, college president Steven B. Sample—the man who turned the University of Southern California into one of the most respected and highly rated universities in the country—challenges many conventional teachings on the subject. Here, Sample outlines an iconoclastic style of leadership that flies in the face of current leadership thought, but a style that unquestionably works, nevertheless. Sample urges leaders and aspiring leaders to focus on some key counterintuitive truths. He offers his own down-to-earth, homespun, and often provocative advice on some complex and thoughtful issues. And he provides many practical, if controversial, tactics for successful leadership, suggesting, among other things, that leaders should sometimes compromise their principles, not read everything that comes across their desks, and always put off decisions.

**Molecular and Cellular Basis of Visual Acuity** S.R.

Hilfer, J.B. Sheffield, 2012-12-06 The Seventh Symposium on Ocular and Visual Development was held in October, 1982. The aim of the meeting was to develop a broad perspective on visual

acuity. The subject was discussed initially in terms of molecular events of photoreception, and the metabolism of the photoreceptor elements. Subsequent papers presented the development and complexity of the neurocircuitry and transmitter systems in the retina that process the visual information prior to transfer to the brain. The meeting concluded with a series of papers on behavioral and physiological methods of measurement of visual acuity in humans, particularly young children. This volume arose from the papers presented at the meeting. We feel that the juxtaposition of research of broadly differing methodologies will be stimulating, rather than daunting, and will generate an enhanced understanding of this complex subject. We are indebted to our colleagues: Dr. M. Mote from Temple University, and Drs. J. Siegfried, P. Dayhaw-Barker, and L. Press from the Pennsylvania College of Optometry for their expertise and assistance in the organization of the meeting; to the speakers for their presentations and contributions to this volume; and to the reviewers of the manuscripts for their helpful comments. This symposium could not have been held without the generous support of the Temple University College of Arts and Sciences and the Pennsylvania College of Optometry. We also thank Merck, Sharp and Dohme, Inc. for their donation.

**Total Acuity** Shlomi Ron, 2019-12-16 Total acuity refers to the sharpness of vision. We all carry a storytelling mind that uses stories to make sense of the world. This book explores this innate ability to develop detail-rich visual stories that vividly illustrate the power of visual storytelling - the next generation's marketing approach. The logic is simple: The more meaningful details your story carries, the stronger propensity for your customer to see herself in your story and act on your call-to-action. These short stories will introduce you - the marketer or entrepreneur - to three storytelling channels: (i) A series of ordinary but true stories, (ii) supported with illustrative visuals that demonstrate visual storytelling principles, and (iii) actionable lessons from

each story that you could easily apply to your business. I hope you'll often be able to see yourself mirrored in some of these stories with direct benefits to your personal and business worlds.

Stereoscopic acuity in ocular pursuit of moving objects

Matthias Sachsenweger, Ulrich Sachsenweger, 2012-12-06 There has been growing acceptance of the insight that the methods so far used in the testing of visual functions have been inadequate when it comes to specific problems and should, therefore, be supplemented with more specialised methods for dynamic testing. As long as two decades ago, large-scale mass screening produced evidence to the effect that visual acuity, so far exclusively determined by means of still samples, was not identical with visual acuity in the ocular pursuit of moving targets (dynamic visual acuity). In other words, vision testing can, at present, provide little information on an individual's capability of identification, appreciation, and judgement of mobile objects. Spatial, three-dimensional perception of moving targets, hereafter referred to as dynamic stereoacuity, is the particular subject on which findings are reported in this article. Findings of that kind are of considerable relevance to everyday life, since many of the phenomena that have to be three-dimensionally perceived in private life and in occupational practice, are in movement. So far, dynamic stereoacuity has never been systematically studied and is still a blank space on the maps of ophthalmology and physiology. This is equally true for dynamic stereoscopy in binocular vision as well as for perception on the

basis of movement parallax, a phenomenon of differentiated contour displacement within a given field of vision which is also available to the monocular individual under conditions of head or body or object movement within the visual space.

**Directional Differences in Visual Acuity During Vertical Nystagmus** W. Carroll Hixson, Jorma I. Niven, 1969 Twenty naval aviator candidates were exposed to four ramp velocity test profiles generated by the Human Disorientation Device. The head orientation was such that the y (left-right) axis was on the Earth-vertical rotational center of the device, with the resulting alpha y pitch stimulation eliciting vertical nystagmus which was recorded on all four profiles. During two of the profiles, the subjects were required to observe a visual target consisting of a vertically aligned series of dots and to report the duration of the period where dot fusion or target blur occurred as a result of the vertical nystagmus. It was found that during pitch forward angular acceleration resulting in nystagmus with a slow component upward, the loss of visual acuity was of a significantly longer duration than that present during stimulation in the opposite direction. Directional differences in the vertical nystagmus

response were also observed. (Author).
