**Grow Home** Avi Friedman,2001 In *The Grow Home*, Avi Friedman, winner of the United Nations World Habitat Award and internationally acclaimed architect, recounts the genesis and development of his innovative project. Like the auto industry's approach to the economy car, Friedman's *Grow Home* gives people what they need in a house at an affordable price - a quality product that allows both the perimeter and interior of a house to be expanded and changed to fit the space needs and budget of its owners. Frills are extra. With economic restructuring, demographic shifts, and lifestyle changes, the traditional family - working father, stay-at-home mother, two to three children - is no longer the norm and the need for smaller homes at moderate cost has skyrocketed. The first prototype of the *Grow Home* was built on the campus of McGill University in 1990 and more than one thousand units were built across North America and Europe in the first year alone. In this illustrated guide, Friedman describes the background, conception, and construction of these modest (14' x 36') homes. He details their construction for prospective owners, builders, and architects, showing how past and contemporary precedents were transformed and how the first versions were adapted by the building industry. Visits to completed *Grow Homes* shed light on why such homes were purchased and the process by which they grew. Friedman also shows how the design has been adapted for prefabrication to meet the needs of the developing world. He describes the contribution that small-unit design makes to saving valuable natural resources and shares his experiences in planning communities based on the *Grow Home*. The *Grow Home* reveals the development and history of a concept that revolutionizes the home and building industry, has been translated into over 10,000 housing units and has received, among many accolades, the United Nations World Habitat Award
