Understanding Airspace, Objects, and Their Effects on Airports ,2010 ACRP Report 38: Understanding Airspace, Objects, and Their Effects on Airports provides a comprehensive description of the regulations, standards, evaluation criteria, and processes designed to protect the airspace surrounding airports. Aviation practitioners, local planning and zoning agencies, and developers all have a need to understand and apply the appropriate airspace design and evaluation criteria to ensure a safe operating environment for aircraft, to maintain airport operational flexibility and reliability, without unduly restricting desirable building development and attendant economic growth in the surrounding community.

Airspace Closure and Civil Aviation Steven D. Jaffe,2016-03-03 The impact to airlines from airspace closure can be as benign as a two minute extension on an arrival pattern, or as catastrophic as a shoot down from a surfaceto-air missile, as the tragic loss of Malaysia Airlines Flight 17 over the Ukraine in July 2014 demonstrates. Airspace constraints come in a variety of forms, both man-made and physical, but all result in operational inefficiencies that erode the economic vitality of an airline. Understanding the root causes of these airspace restrictions, developing strategies for mitigating their impact, and anticipating future airspace closures, are critical for the efficient and safe operation of any airline. This book uniquely examines the technological, geographic, regulatory, and political aspects of airspace closure, with a focus on how airlines continue to adapt to overcome these challenges, providing readers with a framework for identifying issues and solutions in a systematic manner. Filled with historical references and contemporary anecdotes, this book serves both as a practical guide and strategic resource for airline managers navigating their 21st century. organizations around some of the lingering 20th century obstacles.

Doctrine and Procedures for Airspace Control in the Combat Zone United States. Department of the Air Force,1975 On Integrating Unmanned Aircraft Systems into the National Airspace System Konstantinos Dalamagkidis,Kimon P. Valavanis,Les A. Piegl,2011-10-05 This book presents, in a comprehensive way, current unmanned aviation regulation, airworthiness certification, special aircraft categories, pilot certification, federal aviation requirements, operation rules, airspace classes and regulation development models. It discusses unmanned aircraft systems levels of safety derived mathematically based on the corresponding levels for manned aviation. It provides an overview of the history and current status of UAS airworthiness and operational regulation worldwide. Existing regulations have been developed considering the need for a complete regulatory framework for UAS. It focuses on UAS safety assessment and functional requirements, achieved in terms of defining an "Equivalent Level of Safety", or ELOS, with that of manned aviation, specifying what the ELOS requirement entails for UAS regulations. To accomplish this, the safety performance of manned aviation is first evaluated, followed by a novel model to derive reliability requirements for achieving target levels of safety (TLS) for ground impact and mid-air collision accidents.It discusses elements of a viable roadmap leading to UAS integration in to the NAS. For this second edition of the book almost all chapters include major updates and corrections. There is also a new appendix chapter.

Design for the National Airspace Utilization System Federal Aviation Agency (FAA), 1962-09-01 Airspace is an important resource and its proper or improper utilization will have a profound effect upon the future welfare of the United States. The use of airspace will have an impact not only on transportation, public safety, economics and military posture, but also on the public's convenience and pleasure. It was in recognition of this that the Federal Aviation Agency was directed by the President of the United States in 1961 to conduct a scientific, engineering review of our aviation facilities and related research and development and to prepare a practicable long-range plan to insure efficient and safe control of all air traffic within the United States. This plan must provide for an orderly and economic evolution of the present system of air traffic control in pace with continuing advances in technology and national needs. The resultant Project Beacon Report completed in October 1961 and approved by the President November 7, 1961, provided the scientific, engineering review and guidelines for the practicable long-range plan. Accordingly, a System Design Team was formed within the Systems Research and Development Service of the Federal Aviation Agency to carry forward the guidelines of the Project Beacon Report into a detailed and comprehensive system plan. On June 30, 1962, the first edition of this long-range plan for the National Airspace Utilization System was completed. Because the problems are complex and extensive, the plan itself is voluminous and the details on which it is based are highly technical. Yet it is important that the essence of this plan be understood by many people who cannot afford the time to study the details of the plan. This summary describes all essential elements of the plan. International Air Traffic Control Arnold Field, 1985 This book fills a vital gap in the literature on air traffic control. It gives an insight into the UK ATC system, including systems and principles and airspace management, which also has a worldwide application. The most recent advances are discussed including application of secondary surveillance radar, application of automation, airborne threat alert and collision avoidance systems - Mode 'S' and Monopulse SSR. Arnold Field also examines the collaboration, for safety reasons and to ensure the most economic use of national resources, between civil and military authorities.

Transformation in the Air National Research Council, Division on Engineering and Physical Sciences, Aeronautics

and Space Engineering Board, Committee to Review the Federal Aviation Administration Research Plan on Certification of New Technologies into the National Airspace System, 2015-07-24 The Federal Aviation Administration (FAA) is currently undertaking a broad program known as Next Generation Air Transportation System (NextGen) to develop, introduce, and certify new technologies into the National Airspace System. NextGen is a fundamentally transformative change that is being implemented incrementally over a period of many years. Currently, the FAA is putting into place the foundation that provides support for the future building blocks of a fully operational NextGen. NextGen is a challenging undertaking that includes ground systems, avionics installed in a wide range of aircraft, and procedures to take advantage of the new technology. Transformation in the Air assesses the FAA's plan for research on methods and procedures to improve both confidence in and the timeliness of certification of new technologies for their introduction into the National Airspace System. This report makes recommendations to include both ground and air elements and document the plan's relationship to the other activities and procedures required for certification and implementation into the National Airspace System.

<u>Federal Aviation Regulations</u> United States. Federal Aviation Administration, 1992

The Law of Airspace Robert R. Wright, 1968 This book is concerned with property rights in airspace, a subject which has increasing importance in the urban setting. This is a book not only on the law which affects the utilization of airspace, but also on the methods and instruments employed in airspace transactions as such. In terms of the law invovled, as revealed in applicable cases and statutes, the historical background and the basis of the legal siutation as it exists today are discussed. A major part of this discussion involes aviation and the problem of the airport and the landowners who surround it. Similarly, the modern-day condominium, as provided for in recent statutory enactments, and its common law analogy, the 'upper chamber', are examined. Consideration is given in one chapter to some of the particular legal problems which may affect airspace utilization in certain jurisdictions. Also, the socio-economic trends and tendencies which affect law generally and the law of airspace in particular are considred at one one point. The discussion and the materials on airspace transactions are found in the latter part of the book. Since the economics of a particular situation are vital in determining whether airspace utilization is feasible, this aspect is also considered in a chapter dealing with the valuation of airspace. How airspace utilization meshes with the goals of city planners is also briefly considered.

Assessing the Risks of Integrating Unmanned Aircraft Systems (UAS) into the National Airspace System National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, Aeronautics and Space Engineering Board, Committee on Assessing the Risks of Unmanned Aircraft Systems (UAS) Integration, 2018-10-04 When discussing the risk of introducing drones into the National Airspace System, it is necessary to consider the increase in risk to people in manned aircraft and on the ground as well as the various ways in which this new technology may reduce risk and save lives, sometimes in ways that cannot readily be accounted for with current safety assessment processes. This report examines the various ways that risk can be defined and applied to integrating these Unmanned Aircraft Systems (UAS) into the National Airspace System managed by the Federal Aviation Administration (FAA). It also identifies needs for additional research and developmental opportunities in this field.
