Broadband At the Speed of Light: How Three Communities Built Next-Generation Networks Christopher Mitchell,2012-04-09 Frustrated by ever-increasing prices for telecommunication services and the reluctance of incumbent providers to upgrade their networks to meet 21st century needs, more than 150 communities have built their own citywide cable and FTTH networks. Against great odds and in the face of ferocious opposition by the existing telephone and cable companies in the courts, at the legislature, and in the marketplace, the vast majority have succeeded.To understand how this has occurred and to extract lessons that might be useful for cities deciding whether to build their own networks, we undertook an in-depth examination of three municipally owned networks in Bristol Va., Chattanooga, Tenn., and Lafayette, La. Each of these communities already had access to the Internet via DSL and cable. But in the words of Lafayette City-Parish President Joey Durel, They wanted more. Without investment in next-generation networks, these cities feared they would be left behind in the transition to the digital economy of the Internet era.

Video Recording Technology Aaron Foisi Nmungwun,2012-11-12 Video recording has recently become an important phenomenon. Although the majority of American homes have at least one video recording set, not much is known about video recording's past and about its continual effect on affiliated industries. This text documents the history of magnetic recording, stressing its importance in consumer as well as commercial applications from the advent of magnetism through the invention of such new technologies as Digital Audio Tape (DAT), High Definition Television (HDTV), and a multitude of sophisticated Digital Video Cassette Recorders.

Digital Watermarking Mauro Barni,Ingemar Cox,Ton Kalker,Hyoung Joong Kim,2005-09-21 We are delighted to welcome the attendees of the Fourth International Wo- shop on Digital Watermarking (IWDW).

Watermarking continues to generate strong academic interest. Commercialization of the technology is proceeding at a steadypace. We have seen watermarking adopted for DVD audio. Fingerprinting technology was successfully used to determine the source of pirated video material. Furthermore, a number of companies are using watermarking as an enabling technology for broadcast monitoring services. Watermarking of digital cinema content is anticipated. Future applications may also come from areas related to digital rights management. For example, the use of watermarking to enhance legacy broadcast and communication systems is now being considered. IWDW 2005 offers an opportunity to reflect upon the state of the art in digital watermarking as well as discuss directions for future research and applications. This year we accepted 31 papers from 74 submissions. This 42% acceptance rate indicates our commitment to ensuring a very high quality conference. We thank the members of the Technical Program Committee for making this possible by their timely and insightful reviews. Thanks to their hard work this is the first IWDW at which the final proceedings are available to the participants at the time of the workshop as a Springer LNCS publication.

Bottom-up Network Restoration Based on Distributed Generation Cong Shen,2019-07-12 The restoration of large electrical power systems after a blackout is often a challenging task. Recently, more and more distributed generations (DGs) are integrated into distribution network. The DGs with different types, such as renewable energy sources (RES) equipped with storage or precise forecasting technology, small hydro-electrical power plants, combined heat and power (CHP) etc., make distribution network much more “active” than before. After power system blackout, an “active” distribution network could reboot immediately by using DGs instead of waiting until transmission network has restored. Since the restored “active” distribution network can be regarded as an additional and controllable power source from the view of transmission network, novel bottom-up restoration operations which have not been seen in traditional restoration plans can be developed.

In this thesis, the proposed bottom-up restoration algorithms consist of four parts. The first part is to determine the black start zones after power system blackout. This algorithm is based on fuzzy classification and calculates the black start zone by considering e.g. generator self-excitation, and over-voltage at end of unload line. The second and third algorithms which determine the generator startup and load restoration sequence are used to calculate the restoration time and restorable load within each black start zone. The results show that the restoration time can be reduced significantly by proposed algorithms. In the fourth part, the proposed bottomup restoration algorithms are implemented on a real transmission and distribution network in JiangXi province, China. The final results show that DGs in distribution network can improve the entire restoration process in various ways. The results of this thesis demonstrate that the proposed bottom-up network restoration methodologies by using distributed generations (DGs) are faster and more reliable than the traditional network restoration methodology.

Cost of Capital Shannon P. Pratt,2003-02-28 An authoritative text on cost of capital for both the nonprofessional and the valuation expert -- now revised and expanded In endeavoring to practice sound corporate finance, there is perhaps nothing so critical, nor slippery, as cost of capital estimation. The second edition of Cost of Capital: Estimation and Applications combines a state-of-the-art treatise on cost of capital estimation with an accessible introduction for the nonprofessional. This comprehensive yet usable guide begins with an exposition of basic concepts understandable to the lay person and proceeds gradually from simple applications to the more complex procedures commonly found in the marketplace. New features of the revised and expanded Second Edition include chapters on Economic Value Added (EVA) and reconciling cost of capital in the income approach with valuation multiples in the market approach, as well as expanded coverage of cost of capital in the courts and handling discounts for marketability. Cost of Capital remains an incomparable resource for all parties interested in effective business valuation.

Recent Advances in Nucleosides: Chemistry and Chemotherapy C.K. Chu,2002-09-11 The book covers up-to-date information on nucleosides and antiviral chemotherapy contributed by the world experts in the field of nucleoside. This book is the result of a meeting honoring Dr. Jack J. Fox, who was one of the pioneers in nucleoside chemistry and chemotherapy. This book consists of 15 excellent chapters in the area, which include topics from recent synthetic methodologies, nucleoside kinase implicated in chemotherapy and drug design, excellent reviews on antiviral agents, nucleoside metabolism/mode of action in parasites, new compounds under clinical and pre-clinical trials, IMPDH inhibitors to review on nucleoside prodrugs.

Polyelectrolytes with Defined Molecular Architecture I Manfred Schmidt,2004-01-21 Praise for Ed M.Schmidt's, Polyelectrolytes with Defined Molecular Architecture I POLYMERNEWS All articles are well prepared and structured. Although not written as textbooks, general introductions of the chapters provide basic knowledge of the separate fields, methods and theoretical background. Therefore, the volumes can be recommended not only for specialists in the field. The books make an important contribution to polyelectrolyte research and application. I recommend the volumes to all scientists and engineers actively dealing with

polyelectrolytes.

Topological Derivatives in Shape Optimization Antonio André Novotny,Jan Sokołowski,2012-12-14 The topological derivative is defined as the first term (correction) of the asymptotic expansion of a given shape functional with respect to a small parameter that measures the size of singular domain perturbations, such as holes, inclusions, defects, source-terms and cracks. Over the last decade, topological asymptotic analysis has become a broad, rich and fascinating research area from both theoretical and numerical standpoints. It has applications in many different fields such as shape and topology optimization, inverse problems, imaging processing and mechanical modeling including synthesis and/or optimal design of microstructures, fracture mechanics sensitivity analysis and damage evolution modeling. Since there is no monograph on the subject at present, the authors provide here the first account of the theory which combines classical sensitivity analysis in shape optimization with asymptotic analysis by means of compound asymptotic expansions for elliptic boundary value problems. This book is intended for researchers and graduate students in applied mathematics and computational mechanics interested in any aspect of topological asymptotic analysis. In particular, it can be adopted as a textbook in advanced courses on the subject and shall be useful for readers interested on the mathematical aspects of topological asymptotic analysis as well as on applications of topological derivatives in computation mechanics.

Clinical Use of Antiviral Drugs Erik de Clercq,2012-12-06 Antiviral chemotherapy has come of age, and, after an initial slow pro gress, the development of new antiviral agents has proceeded at a more rapid pace and the perspectives for their clinical use have increased considerably. Now, 25 years after the first antiviral assay (idoxuridine) was introduced in the clinic, it is fitting to commemorate the beginning of the antivirals' era. In its introductory chapter B.E. Juel-Jensen touches on what may be con sidered as five of the most fundamental requirements of an antiviral drug : efficacy, relative non-toxicity, easy solubility, ready availability and rea sonable cost. Surely, the antiviral drugs that have so far been used in the clinic could still be improved upon as one or more of these five essential demands are concerned. How is all began is narrated by W.H. Prusoff. The first antiviral drugs to be used in humans were methisazone and idoxuridine, the former, which is now of archival interest, in the prevention of smallpox, the latter, which was approved for clinical use in the United States in 1962, for the topical treatment of herpetic keratitis. In terms of potency, also because of solubility reasons, idoxuridine has been superseded by trifluridine in the topical treatment of herpes simplex epithelial keratitis. H.E. Kaufman did not find trifluridine or acyclovir ef fective in the treatment of deep stromal keratitis or iritis and he reckons that other antiviral drugs (i.e. bromovinyldeoxyuridine) would not be effec tive either.
