Climate Change Arnd Bernaerts, 2022-06-27 The focus of Dr. Bernaerts' climate work has been to raise awareness of the importance and better understanding of the oceans to minimize the risk of anthropogenic impact on the marine environment, which may have profound impact on climate change. He discovered that major climatic shifts starting in 1850 can be linked to naval war activities during World War I, namely the warming of the Northern Hemisphere from about 1918 to 1939. Also a factor was global cooling from 1940 through mid-1970s, which started with three extraordinarily harsh winters in Europe from December 1939. In many regions the winters were the coldest in more than a century as analyzed in several studies since 2006.

Genetic Manipulations with Plant Material Lucien Ledoux, 2013-06-29 Mankind, throughout history, has strived to improve his food sources. By means of slow and empirical selections, it has been possible to greatly increase both quantity and quality of plant crops. This procedure has brought the most useful cereals to a state of refinement that seems to be difficult to further improve by the same methodology. Indeed, natural sexual mechanisms were always used to cross closely related sexually and genetically compatible organisms; the selection procedure consisted of isolating the most promising progenies. Obviously, by this way, plants could only share preexisting genetic pools. On the other hand, the last decade has seen drastic modifications of the experimental plant sciences, with the appearance of new technological possibilities. Because of this profound reshaping of our experimental approaches, other means can now be realistically envisaged in order to achieve similar or even higher goals. It is, for instance, possible to attempt completing sexual crosses (where both male and female gametes bring together the genetic informations necessary for growth and development of the offspring) by parasexual means by which novel genetic informations could possibly be added to the heritage •. At the limit, such genetic manipulations could enable man to create plants capable of producing new substances characteristic of unrelated plants or, more generally, of other living organisms. Even if these possibilities might appear quite remote, the interest of Scientists has been awakened and, indeed, several attempts to such genetic manipulations have already been made.

Cultured Microalgae for the Food Industry Tomas Lafarga, Gabriel Acien, 2021-05-12 *Cultured Microalgae for the Food Industry: Current and Potential Applications* is a comprehensive reference that addresses the current applications and potential uses of microalgae and microalgae-derived compounds in the food industry. Elisabeth Mann Borgese and the Law of the Sea Tirza Meyer, 2022-03-21 In the late twentieth century, as the United Nations struggled to come up with a new legal system for the oceans, one woman saw the opportunity to promote radical new ideas of justice and internationalism. Ocean governance expert Elisabeth Mann Borgese (1918–2002) spent decades working with the United Nations Law of the Sea Convention. Throughout this sprawling series of global conferences, she navigated allegiances and enmities, intrigues and setbacks, fighting determinedly to develop a just ocean order. Featuring extensive research and new interviews with Mann Borgese's colleagues and family, this book explores timeless questions of justice and international collaboration and asks whether the extraordinary drive and vision of a single person can influence the course of international law.

Supercarbon Susumu Yoshimura, R.P.H. Chang, 2013-11-11 The information revolution of the twentieth century was brought about by microelectronics based on a simple and common material, silicon. Although silicon will continue to be of central importance in the next century, carbon, silicon's upstairs neighbor in the periodic table, will also be of great importance in future technology. Carbon has more flexible bonding and hence has various unique physical, chemical and biological properties. It has two types of bonding, sp³ and sp², in diamond and graphite, respectively. The existence of the latter, 7r-electron bonding, is responsible for carbon's versatile talents. Those materials having extended 7r-electron clouds are called '7r-electron materials'. They include graphite, carbon nanotubes, fullerenes and various carbonaceous materials. They may be called supercarbon because of their fabulous multififormity and versatile properties. This volume is a status report on the synthesis, properties and

applications of 7r-electron materials, representing an updated proceedings of the International Workshop on 7r-Electron Materials held at the Northwestern University, Evanston, Illinois, USA, August 13-14, 1996. The Workshop was organized jointly by the Japan Science and Technology Corporation (JST) and the Materials Research Center at the Northwestern University (NWU) in order to provide an opportunity for scientists and engineers to meet and discuss the latest advances in this field and in commemoration of the Yoshimura 7r-Electron Materials Project, one of Japan's national projects in the JST's ERATO (Exploratory Research for Advanced Technology) program.

Bacterial Infections of the Central Nervous System Karen L. Roos, Allan R. Tunkel, 2010-01-23 Bacterial Infections of the Central Nervous System aims to provide information useful to physicians taking care of patients with bacterial infections in the central nervous system (CNS), which can lead to morbidity and mortality. The increased number of patients suffering from this infection has led to the development of vaccines and antibiotics. Comprised of four chapters, the book explains the general approach to patients with bacterial CNS infection. It also discusses various CNS infection concepts and terms. These include the characteristic neuroimaging appearance of specific bacterial infections, the limitations of neuroimaging, the cerebrospinal fluid analysis, the pathogenesis and pathophysiology of bacterial CNS infections, the developments of specific adjunctive strategies, and the principles of antimicrobial therapy. It also includes discussions on various diseases that target the CNS, such as meningitis, focal CNS infections, neurological complications of endocarditis, suppurative venous sinus thrombosis, infections in the neurosurgical patient, and CNS diseases caused by selected infectious agents and toxins. This book will serve as a guide for clinical physicians who have patients suffering from bacterial CNS infection. * Valuable insights into the pathophysiological mechanism of bacterial CNS infections * A multidisciplinary reach that provides critical information for neurologists, neurosurgeons, and specialists in infectious disease * Considerable information and emphasis on new diagnostic techniques and laboratory testing

The Stylistics of Landscapes, the Landscapes of Stylistics John Douthwaite, Daniela Francesca Viridis, Elisabetta Zurru, 2017-11-15 In treating the topic of the landscapes of stylistics, this book provides a series of chapters which deal not only with physical landscapes but also with social, mental, historical portraits of places, people and society. The chapters demonstrate that all texts project a worldview, even when the content appears to be only a physical description of the external world. The implication is that texts attempt to produce specific effects on the reader determined by the author's worldview. Contents and effects, (namely mental and emotional states, behaviours), are thus inseparable. Identifying those effects and how they are produced is an eminently cognitive operation. The chapters analyse a variety of linguistic devices and cognitive mechanisms employed in producing the text and accounting for the effects achieved. Though the majority of the chapters have a cognitive basis, a wide range of methodologies are employed, including ecostylistics, offering cutting-edge theoretical approaches teamed

up with close reading. A further crucial feature of this collection is the selection of non-canonical texts, ranging from lesser-known texts in English to significant works in languages other than English, all of which are characterised by important social themes, thus emphasising the importance of critical appreciation as a means of self-empowerment.

The Science and Technology of Carbon Nanotubes T. Yamabe,K. Fukui,Kazuyoshi Tanaka,1999-08-17 Carbon Nanotubes (CNT) is the material lying between fullerenes and graphite as a new member of carbon allotropes. The study of CNT has gradually become more and more independent from that of fullerenes. As a novel carbon material, CNTs will be far more useful and important than fullerenes from a practical point of view, in that they will be directly related to an ample field of nanotechnology. This book presents a timely, second-generation monograph covering as far as practical, application of CNT as the newest science of these materials. Most updated summaries for preparation, purification and structural characterisation of single walled CNT and multi walled CNT are given. Similarly, the most recent developments in the theoretical treatments of electronic structures and vibrational structures are covered. The newest magnetic, optical and electrical solid-state properties providing a vital base to actual application technologies are described. Explosive research trends towards application of CNTs, including the prospect for large-scale synthesis, are also introduced. It is the most remarkable feature of this monograph that it devotes more than a half of the whole volume to practical aspects and offers readers the newest developments of the science and technological aspects of CNTs.
