**Healthcare Biotechnology** Dimitris Dogramatzis,2016-04-19 Foreseeing and planning for all of the possibilities and pitfalls involved in bringing a biotechnology innovation from inception to widespread therapeutic use takes strong managerial skills and a solid grounding in biopharmaceutical research and development procedures. Unfortunately there has been a dearth of resources for this aspect of the field.

**A Biotech Manager's Handbook** M O'Neill,M M Hopkins,2012-05-02 A biotech manager's handbook lays out - in a simple, straightforward manner - for the manager or would-be entrepreneur the basic principles of running a biotech company. Most managers in biotechnology companies are working in their first company or in their first managerial role. Their expertise and experience in the scientific part of the work can be taken as a given but there is a whole range of other skills to be learned and areas of expertise to come to terms with. Small companies do not have big budgets to hire people or time to become an expert in so many areas. The book starts by outlining the state of the biopharmaceutical industry and goes on to explain the importance of planning (no matter what the size of the company). Succeeding chapters deal with the basics of intellectual property, perspectives from a university technology transfer office and how to raise some initial funding from an investor and entrepreneur. No other 'how to' manual exists for this sector Written by a range of expert professionals in each area, all in one book Is the only 'bench to bedside' book covering the whole spectrum of development

**Providing Protection for Plant Genetic Resources:Patents, Sui Generis Systems, and Biopartnerships** Patricia Marin,2002-03-28 The purpose of this book is to show that the access to plant genetic resources and the compliance to the objectives of the Convention on Biological Diversity can only be realised in this biotechnological era the world is facing, through the balance of rights and duties of States and stakeholders. Specifically, this book suggests that the global partnership as professed in the United Nations Conference on Environment and Development, in 1992, has so far not been reached. It examines the possibility of achieving the global partnership through clear, fair, ethical, and equitable biopartnerships in, between, and among States. For this purpose, the author analyses international instruments and national laws dealing with patents, plant breeders' rights, farmers' rights, and sui generis protection and shows how they affect developing countries rich in biodiversity and traditional knowledge, such as Brazil. She raises awareness to problems derived from the patenting of genetic resources, plants, and traditional knowledge and presents sui generis alternatives proposed by different sectors of society in several countries. The book critically examines five biopartnerships of countries in four different continents. The author proposes measures to protect traditional knowledge and innovations and suggests in which indigenous peoples, traditional farmers, and developing countries may achieve an equitable share of benefits for their contribution in the development of new medicines, foods, etc.

*The Business of Bioscience* Craig D. Shimasaki,2009-09-18 My journey into this fascinating field of biotechnology started about 26 years ago at a small biotechnology company in South San Francisco called Genentech. I was very fortunate to work for the company that begat the biotech industry during its formative years. This experience established a solid foundation from which I could grow in both the science and business of biotechnology. After my fourth year of working on Oyster Point Boulevard, a close friend and colleague left Genentech to join a start-up biotechnology company. Later, he approached me to leave and join him in of all places – Oklahoma. He persisted for at least a year before I seriously considered his proposal. After listening to their plans, the opportunity suddenly became more and more intriguing. Finally, I took the plunge and joined this entrepreneurial team in cofounding and growing a start-up biotechnology company. Making that fateful decision to leave the security of a larger company was extremely difficult, but it turned out to be the beginning of an entrepreneurial career that forever changed how I viewed the biotechnology industry. Since that time, I have been fortunate to have cofounded two other biotechnology companies and even participated in taking one of them public. During my career in these start-ups, I held a variety of positions, from directing the science, operations, regulatory, and marketing components, to subsequently becoming CEO.
