Mobile Web Browsing Using the Cloud Bo Zhao, Byung Chul Tak, Guohong Cao, 2013-07-22 This brief surveys existing techniques to address the problem of long delays and high power consumption for web browsing on smartphones, which can be due to the local computational limitation at the smartphone (e.g., running java scripts or flash objects) level. To address this issue, an architecture called Virtual-Machine based Proxy (VMP) is introduced, shifting the computing from smartphones to the VMP which may reside in the cloud. Mobile Web Browsing Using the Cloud illustrates the feasibility of deploying the proposed VMP system in 3G networks through a prototype using Xen virtual machines (in cloud) and Android Phones with ATT UMTS network. Techniques to address scalability issues, resource management techniques to optimize the performance of the VMs on the proxy side, compression techniques to further reduce the bandwidth consumption, and adaptation techniques to address poor network conditions on the smartphone are also included.

The Ecology of Browsing and Grazing Iain J. Gordon, Herbert H.T. Prins, 2007-09-14 This volume investigates how large herbivores not only influence the structure and distribution of the vegetation, but also affect nutrient flows and the responses of associated fauna. The mechanisms and processes underlying the herbivores' behavior, distribution, movement and direct impact on the vegetation are discussed in detail. It is shown that an understanding of plant/animal interactions can inform the management of large herbivores to integrate production and conservation in terrestrial systems.

A Windows NT/NTM Guide to the Web Richard Raucci, 2011-06-27 NT as an Operating System Microsoft developed Windows NT as an alternative to Unix. The company sees it as a part of its overall Enterprise Computing plan. It scales up from basic 486 systems to high-end RISC systems from companies like Digital, NEC, and PC vendors offering PowerPC systems for NT. The basic operating system

consists of a user interface shell (similar in appearance to Windows 3.1 for NT 3.1 to 3.5, and changing to look and feel more like Windows 95 for NT 4.0) designed to run 32-bit programs. This makes it ideal for the multi media nature of Web browsers, and for the heavy-duty requirements of a Web server. There are a number of elements in the OS that are special to NT. These include the control panels and administrative support tools relating to NT's services and support mechanisms. TCP/IP is included for Internet access through traditional networks. You can also connect from Windows NT Workstation via MS Remote Access to any Internet Access Provider supporting PPP. Basic requirements for Windows NT Workstation are a 486 system with at least 8 MB of RAM, although 16 MB is recommended. The client software needed to connect to a corporate server is included, as is the Remote Access software mentioned earlier.

Genomes, Browsers and Databases Peter Schattner, 2008-06-16 The recent explosive growth of biological data has led to a rapid increase in the number of molecular biology databases. Held in many different locations and often using varying interfaces and non-standard data formats, integrating and comparing data from these multiple databases can be difficult and time-consuming. This book provides an overview of the key tools currently available for large-scale comparisons of gene sequences and annotations, focusing on the databases and tools from the University of California, Santa Cruz (UCSC), Ensembl, and the National Centre for Biotechnology Information (NCBI). Written specifically for biology and bioinformatics students and researchers, it aims to give an appreciation of the methods by which the browsers and their databases are constructed, enabling readers to determine which tool is the most appropriate for their requirements. Each chapter contains a summary and exercises to aid understanding and promote effective use of these important tools.
