War and the Historic Environment Michael Dawson,2024-07-19 This book explores how societies deal with the effects of war on the historic environment. Written by historians, archaeologists, and conservation professionals, it offers a dramatic perspective on the war in Ukraine. It reveals the truth behind the Kremlin’s ‘just war’ narrative and touches on the complex relationship between war, society and the historic environment with examples of heritage conservation, archaeology and political expediency from Europe to Namibia. Prompted by the Russian invasion of Ukraine in 2022, the first section ‘Frontline Ukraine’ examines the manipulation of history, the use of propaganda, and the decolonisation of Russian memorials in former Soviet states. It highlights how illegal archaeological excavations, looting and the removal of museum collections beginning from seizure of Crimea in 2014 until the present day have contributed to an increasingly implausible Russian narrative which attempts to represent an imperial land grab as a ‘just war’. In the second section ‘Aspects of War’, the authors provide a wider perspective, with chapters on the influence of film, the effect of war on conservation, forensic archaeology, the reconstruction of damaged or destroyed museums as well as the relationship between America and the Hague Convention. Topical and lucid, this volume will be beneficial to students and researchers of history, archaeology, politics and international relations. The chapters in this book were originally published in *The Historic Environment: Policy & Practice* and are accompanied by an updated introduction and a new conclusion.

Runtime Verification Shuvendu Lahiri,Giles Reger,2017-09-04 This book constitutes the refereed proceedings of the 17th International Conference on Runtime Verification, RV 2017, held in Seattle, WA, USA, in September 2017. The 18 revised full papers presented together with 3 invited presentations, 4 short papers, 5 tool papers, and 3 tutorials, were carefully reviewed and selected from 58 submissions. The RV conference is concerned with all aspects of monitoring and analysis of hardware, software and more general system executions. Runtime verification techniques are lightweight techniques to assess correctness, reliability, and robustness; these techniques are significantly more powerful and versatile than conventional testing, and more practical than exhaustive formal verification.

Software Engineering and Formal Methods Peter Csaba Ölveczky,Gwen Salaün,2019-09-09 This book constitutes the refereed proceedings of the 17th International Conference on Software Engineering and Formal Methods, SEFM 2019, held in Oslo, Norway, in September 2019. Behavioural Types Simon Gay,António Ravara,2022-09-01 Behavioural type systems in programming languages support the specification and verification of properties of programs beyond the traditional use of type systems to describe data processing. A major example of such a property is correctness of communication in concurrent and distributed systems, motivated by the importance of structured communication in modern software. Behavioural Types: from Theory to Tools presents programming languages and software tools produced by members of COST Action IC1201: Behavioural Types for Reliable Large-Scale Software Systems, a European research network that was funded from October 2012 to October 2016. As a survey of the most recent developments in the application of behavioural type systems, it is a valuable reference for researchers in the field, as well as an introduction to the area for graduate students and software developers.

Formal Modeling and Analysis of Timed Systems Franck Cassez,2008-09-05 This book constitutes the refereed proceedings of the 6th International Conference on Formal Modeling and Analysis of Timed Systems, FORMATS 2008, held in Saint Malo, France, September 2008. The 17 revised full papers presented together with 3 invited talks were carefully reviewed and selected from 37 submissions. The papers are organized in topical sections on extensions of timed automata and semantics; timed games and logic; case studies; model-checking of probabilistic systems; verification and test; timed petri nets.

Runtime Verification Ezio Bartocci,Rupak Majumdar,2015-09-19 This book constitutes the refereed proceedings of the 6th International Conference on Runtime Verification, RV 2015, held in Vienna, Austria, in September 2015. The 15 revised full papers presented together with 4 short papers, 2 tool papers, 4 tutorials, 3 invited talks, and 2 software competition papers were carefully reviewed and selected from 45 submissions. The discussion of the conference centers around two main aspects. The first is to understand whether the runtime verification techniques can practically complement the traditional methods proving programs correct before their execution, such as model checking and theorem proving. The second concerns with formal methods and how their application can improve traditional ad-hoc monitoring techniques used in performance monitoring, hardware design emulation and simulation, etc.
