RAMAS Risk Calc 4.0 Software Scott Ferson,2002-07-24 Many analysts use point estimates and ignore their uncertainty. But we can never be sure about the exact values of numbers based on data. And no practical calculations are without error, even though they may have the appearance of precision. RAMASâ Risk Calc 4.0 Software: Risk Assessment with Uncertain Numbers uses traditional methods such as probability theory and interval analysis and the newest techniques such as probability bounds analysis and fuzzy arithmetic to quantify uncertainty in risk assessments. It creates a convenient environment for computing in which all uncertainties are carried forward automatically. Providing examples in four major application areas, Risk Calc brings sophisticated methods of uncertainty analysis into the reach of anyone who can do arithmetic on a calculator.

Beginning OpenOffice Calc Jacek Artymiak,2011-12-14 OpenOffice Calc is the most powerful and widespread open source spreadsheet application in existence. It is the only real alternative to Excel. Jacek Artymiak is widely regarded as the authority on OpenOffice Calc. He takes you, step by step, from the interface and handling Calc files to working with data sources small and large. Artymiak then extends the reader's skillset to data visualization, writing complex formulas and performing statistical analysis. Beginning OpenOffice Calc allows you to gain confidence in the considered use of statistical formulas, but does not assume familiarity with another spreadsheet application.

EMACS CALC REF MANUAL Dave Gillespie,2017-02-25 This document serves as a complete description of the GNU Emacs Calculator. It works both as an introduction for novices and as a reference for experienced users. While it helps to have some experience with GNU Emacs in order to get the most out of Calc, this manual ought to be readable even if you don't know or use Emacs regularly. Calc is an advanced calculator and mathematical tool that runs as part of the GNU Emacs environment. Very roughly based on the HP-28/48 series of calculators, its many features include: Choice of algebraic or RPN (stack-based)

entry of calculations. Arbitrary precision integers and floating-point numbers. Arithmetic on rational numbers, complex numbers (rectangular and polar), error forms with standard deviations, open and closed intervals, vectors and matrices, dates and times, infinities, sets, quantities with units, and algebraic formulas. Mathematical operations such as logarithms and trigonometric functions. Programmer's features (bitwise operations, non-decimal numbers). Financial functions such as future value and internal rate of return. Number theoretical features such as prime factorization and arithmetic modulo m for any m. Algebraic manipulation features, including symbolic calculus. Moving data to and from regular editing buffers. Embedded mode for manipulating Calc formulas and data directly inside any editing buffer. Graphics using GNUPLOT, a versatile (and free) plotting program. Easy programming using keyboard macros, algebraic formulas, algebraic rewrite rules, or extended Emacs Lisp. Calc tries to include a little something for everyone; as a result it is large and might be intimidating to the first-time user. If you plan to use Calc only as a traditional desk calculator, all you really need to read is the Getting Started chapter of this manual and possibly the first few sections of the tutorial. As you become more comfortable with the program you can learn its additional features. Calc does not have the scope and depth of a fully-functional symbolic math package, but Calc has the advantages of convenience, portability, and freedom.

Quality of Life, Balance of Power, and Nuclear Weapons (2015) Alexander V. Avakov,2015-04-01 Who has the most nuclear assets in the Middle East? Whose power is waning, whose increasing? Updated with data from 2013, the latest available, these tables of economic, demographic and military indicators establish the pecking order for 236 countries, with estimates of all nuclear arsenals including rarely published data on non-signatory nations. The author also sums up what statistics in the developed world show in relation to the efficiency of private health insurance versus a 'public option' and whether it is true that 'taxation stifles the economy.' This statistical annual presents fundamental data comparing measures of (1) Quality of Life, (2) Balance of Power, and (3) Developed Market Economies since 1960. It is far more complete other statistical publications. Section 2 includes data about nuclear delivery systems and the number of nuclear warheads of all nuclear powers, including estimates of the Israeli nuclear arsenal which usually do not appear in the press. Official estimates of Russian military expenditures distributed by U.S. and British intelligence communities are methodologically flawed, claiming to show military expenditures of other countries at market exchange rates while they apparently cite Russian military expense figures at purchasing power parities, thus distorting the comparison. Such deceptive practices of the Anglo-American intelligence services are counter-balanced by presenting two different tables, showing military expenditures estimates both at market exchange rates and by purchasing power parities. Members of the U.S. Congress and others who care about the foundations of power politics in the nuclear age will find facts that speak for themselves in this novel yearbook.
