**Drug Offences in Ireland** Garnet Orange, 2021-01-28 This concise, practical text, written by one of Ireland's leading criminal barristers, deals with all the key areas of drugs law including sentencing, possession, importation, stop and search, search warrants, entrapment, evidence and defences. New to the second edition: \* The chapter on possession has been largely rewritten to take account of changes in the case law since 2010. \* The book has been updated to reflect the changes to the law brought about by the Customs Act 2015 and the Communications Regulation (Postal Services) Act 2011. \* The chapter on cultivation has been expanded since the first edition. This area of law has become much more significant since 2010. There have been a lot more cases of the grow house category being processed by the courts, although the law itself has not changed significantly. These cases tend to be relevant in the context of sentencing. \* The second edition contains the following new chapter: Powers for Investigating Drugs Offences. \* The section dealing with adverse inference questioning has been thoroughly rewritten and contextualised it to focus on drugs offences. There have been a number of important decisions from the Irish courts relating to these provisions within the past 10 years (and the author appeared in some of those cases). \* The entrapment procedures material has been revised to take account of a number of significant decisions in recent years. \* Ch 18 on Defences has been revised in light of the Smyth decision in 2010, which related to the burden on the accused. \* Sentencing is one of the most important aspects of drugs law and this material has been brought up to date. Of particular significance is the addition of a section on grow houses and cultivation. New legislation and cases that are dealt with in this edition: \* Misuse of Drugs Regulations 2017 \* Customs Act 2015 \* Communications Regulation (Postal Services) Act 2011 \* DPP v Smyth [2010] 3 IR 368 \* DPP v JC [2015] IESC 31

**Roberts & Zuckerman's Criminal Evidence** Paul Roberts, 2022-08-04 Roberts and Zuckerman's *Criminal Evidence* is the eagerly-anticipated third of edition of the market-leading text on criminal evidence, fully revised to take account of developments in legislation, case-law, policy debates, and academic commentary during the decade since the previous edition was published. With an explicit focus on the rules and principles of criminal trial procedure, Roberts and Zuckerman's *Criminal Evidence* develops a coherent account of evidence law which is doctrinally detailed, securely grounded in a normative theoretical framework, and sensitive to the institutional and socio-legal factors shaping criminal litigation in practice. Engineering Mineralized and Load Bearing Tissues Luiz E. Bertassoni, Paulo G. Coelho, 2015-11-07 This book offers a comprehensive overview of current challenges and strategies to regenerate load-bearing and calcified human tissues, including bone, cartilage, tendon, ligaments and dental structures (dentin, enamel, cementum and periodontal ligament). Tissue engineering has long held great promises as an improved treatment option for conditions affecting mineralized and load-bearing structures in the body. Although significant progress has been achieved in recent years, a number of challenges still exist. Scaffold vascularization, new biofabrication methods (3D printing, lithography, microfabrication), peptide conjugation methods, interface engineering, scaffold mechanical properties, iPS cells, organs-on-a-chip, are some of the topics discussed in this book. More specially, in the first section readers will find an overview of emerging biofabrication methods. In section 2, applied strategies for regeneration of (2.1) bone, cartilage and ligament, as well as (2.2) dentin, cementum, enamel and periodontal ligament are discussed across 14 chapters. While other volumes have addressed the regeneration of individual tissues, or exclusively focused on different regenerative strategies, the focus of this work is to bring together researchers integrating backgrounds in materials sciences, engineering, biology, mechanics, fluidics, etc, to address specific challenges common to regeneration of several load-bearing and calcified tissues. Therefore, this book provides a unique platform to stimulate progress in the regeneration of functional tissue substitutes. We envision that this book will represent a valuable reference source for university and college faculties, post-doctoral research fellows, senior graduate students, and researchers from R&D laboratories in their endeavors to fabricate biomimetic load bearing tissues.

The Tangle of Science Ann C. (PhD candidate Thresher, PhD candidate University of California San Diego), Nancy Cartwright, Jeremy Hardie, Jeremy (Research Associate Hardie, Research Associate CPNSS London School of Economics), Eleonora Montuschi, Eleonora (Associate Professor Montuschi, Associate Professor University Ca' Foscari Venice), Matthew Soleiman, Matthew (PhD candidate Soleiman, PhD candidate University of California San Diego), Ann C. Thresher, 2023-01-08 Science is remarkably reliable. It puts people on the moon, performs laser eye surgery, tells us about ancient civilizations and species, and predicts the future of our climate. What underwrites this reliability? This book argues that the standard answers--the scientific method, rigour, and objectivity--are insufficient for the job. Here we propose a new model of science which places its products front and centre. In *The Tangle of Science* we show how any reliable piece of science is underpinned by a vast, diverse, and thick network of other scientific products. In doing so we bring back into focus areas of science that have been long neglected, emphasizing how every product, from the screws that hold the space shuttle together, to ways of measuring the consumer price index, to Einstein's theory of general relativity, work together to support results we can trust.

**The Taiwan Independence Movement In and Out of Power** Dongtao Qi, 2015-01-01 This book is a study of the Democratic Progressive Party (DPP), the Taiwan Independence Movement (TIM) and electoral politics in Taiwan during 2000-2012. It consists of two parts: the first part proposes a movement government framework to understand the fluctuating popular support for the DPP government during 2000-2008 when it was in power, and the second part includes a series of studies on the DPP's quick but limited revival during 2008-2012 when it was out of power. For the DPP in and out of power, its strategic relations with the TIM have either promoted or constrained popular support for the DPP under different circumstances. This book reviews the history of the TIM since 1945, its relations with the DPP since 1986, the DPP's strategies in dealing with the TIM, and explains how these strategies have significantly affected the size and composition of the DPP's support base since 2000 by analyzing rich survey data collected during 1996-2013. Theoretically, this book challenges the traditional dichotomous and overly structuralist understanding of state-movement relations; empirically, it provides both qualitative and quantitative analysis of Taiwan's major political and social events since 2000, such as presidential and legislative elections, and rise of Taiwanese nationalism.

**Animal Anomalies** Lewis I. Held, Jr, 2021-03-18 Among the offspring of humans and other animals are occasional individuals that are malformed in whole or in part. The most grossly abnormal of these have been referred to from ancient times as monsters, because their birth was thought to foretell doom; the less severely affected are usually known as anomalies. This volume digs deeply into the cellular and molecular processes of embryonic development that go awry in such exceptional situations. It focuses on the physical mechanisms of how genes instruct cells to build anatomy, as well as the underlying forces of evolution that shaped these mechanisms over eons of geologic time. The narrative is framed in a historical perspective that should help students trying to make sense of these complex subjects. Each chapter is written in the style of a Sherlock Holmes story, starting with the clues and ending with a solution to the mystery.

*New Conjugated Polymers Based on Benzodifuranone and Diketopyrrolopyrrole* Kai Zhang, 2012 In this work synthesis and properties of novel Pi-conjugated polymers containing diketopyrrolopyrrole (DPP) and benzodifuranone (BZDF) chromophores in the main chain, which are suitable as active materials in optoelectronic applications, are developed and investigated. The polymers were synthesized via metal-mediated or -catalyzed Suzuki, Stille, Sonogashira and Yamamoto cross-coupling polycondensation reactions or by using oxidative and anodic electropolymerization. The resulting polymers were characterized using gel permeation chromatography, NMR-, UV/vis-, and fluorescence spectroscopy, mass spectroscopy, and cyclic voltammetry. The polymers exhibit low HOMO-LUMO band gaps and reversible oxidation and reduction processes, which suggests a strong donor-acceptor character. Electrochromic properties were found upon oxidation and reduction. Additionally, a series of cross-linked conjugated microporous polymers was synthesized. They exhibit high surface area and micropores in nanometer range. Furthermore, the influence via variation of electron donor and acceptor on the HOMO-LUMO band gaps of the conjugated polymers was studied.
