Kristine Kathryn Rusch

The Duplicate William Sleator, 1999-06-01 When David finds a mysterious machine that can copy living things, he thinks his problems are over. Now he can be in two places at once: at his grandmother's and out on a date. While the other David is in school, the real one can spend the day at the beach. The possibilities are endless. And they turn terrifying. David's duplicate has a mind, ideas, and desires of his own--and one of them is to see the real David dead.

An Introduction to Duplicate Detection Felix Naumann, Melanie Herschel, 2010 With the ever increasing volume of data, data quality problems abound. Multiple, yet different representations of the same real-world objects in data, duplicates, are one of the most intriguing data quality problems. The effects of such duplicates are detrimental; for instance, bank customers can obtain duplicate identities, inventory levels are monitored incorrectly, catalogs are mailed multiple times to the same household, etc. Automatically detecting duplicates is difficult: First, duplicate representations are usually not identical but slightly differ in their values. Second, in principle all pairs of records should be compared, which is infeasible for large volumes of data. This lecture examines closely the two main components to overcome these difficulties: (i) Similarity measures are used to automatically identify duplicates when comparing two records. Well-chosen similarity measures improve the effectiveness of duplicate detection. (ii) Algorithms are developed to perform on very large volumes of data in search for duplicates. Well-designed algorithms improve the efficiency of duplicate detection. Finally, we discuss methods to evaluate the success of duplicate detection. Adaptive Windows for Duplicate Detection Uwe
Draisbach, Felix Naumann, Sascha Szott, Oliver
Wonneberg, 2012 Duplicate detection is the task of
identifying all groups of records within a data
set that represent the same real-world entity,

respectively. This task is difficult, because (i) representations might differ slightly, so some similarity measure must be defined to compare pairs of records and (ii) data sets might have a high volume making a pair-wise comparison of all records infeasible. To tackle the second problem, many algorithms have been suggested that partition the data set and compare all record pairs only within each partition. One well-known such approach is the Sorted Neighborhood Method (SNM), which sorts the data according to some key and then advances a window over the data comparing only records that appear within the same window. We propose several variations of SNM that have in common a varying window size and advancement. The general intuition of such adaptive windows is that there might be regions of high similarity suggesting a larger window size and regions of lower similarity suggesting a smaller window size. We propose and thoroughly evaluate several adaptation strategies, some of which are provably better than the original SNM in terms of efficiency (same results with fewer comparisons).

Death in Duplicate Carole Coplea, Suzanne Hocking, 2013 A mysterious illness ... two dead bridge players ... what's going on at Kensington College? On the surface Kensington is a typical small college. But when two players collapse and die during a duplicate bridge game at the faculty club, it soon becomes clear that there is more going on at Kensington than meets the eye.

Duplicate Harris Dickson Shortle, 2014-01-16 No man in Louisiana would have believed the fearless advocate John Laronde might be panicked by a snapshot. But it had taken him quite by surprise. It had come so suddenly. Everything was going along as normal for John Laronde. Now a prominent attorney in Louisiana, he was certain he and Ruth had left the past in the past. But when a series of photographs revealing his past, all mysteriously marked *Duplicate*, turn up in stacks of mail awaiting him in his office, he suddenly realizes that someone out there knows the secret only he and Ruth should know. And even stranger, the snapshots have been mailed from different cities and on different dates, a clue the sender has followed their trail from New York City to Louisiana. Suddenly John and Ruth's stable life is thrown into chaos as the sender begins taking diabolical delight in tormenting them. When a murder shocks them all, an entire community will be shaken with a truth hidden for twenty-six years.

Duplicate Keys Jane Smiley, 2010-12-01 From the Pulitzer Prize-winning author of *A Thousand Acres* comes a brilliant literary thriller set in Manhattan that's "as taut and chilling as anything Hitchcock put on film (San Francisco Chronicle). "A first-rate cliffhanger." —The New York Times Book Review Alice Ellis is a Midwestern refugee living in Manhattan. Still recovering from a painful divorce, she depends on the companionship and camaraderie of tightly knit circle of friends. At the center of this circle is a rock band struggling to navigate New York's erratic music scene, and an apartment/practice space with approximately fifty key-holders. One sunny day, Alice enters the apartment and finds two of the band members shot dead. As the double-murder sends waves of shock through their lives, this group of friends begins to unravel, and dangerous secrets

are revealed one by one. When Alice begins to notice things amiss in her own apartment, the tension breaks out as it occurs to her that she is not the only person with a key, and she may not get a chance to change the locks. Jane Smiley applies her distinctive rendering of time, place, and the enigmatic intricacies of personal relationships to the twists and turns of suspense. The result is a thriller that will keep readers guessing up to its final, shocking conclusion.
