Photoalignment of Liquid Crystalline Materials Vladimir G. Chigrinov, Vladimir M. Kozenkov, Hoi-Sing Kwok, 2008-09-15 Photoalignment possesses significant advantages in comparison with the usual 'rubbing' treatment of the substrates of liquid crystal display (LCD) cells as it is a non-contact method with a high resolution. A new technique recently pioneered by the authors of this book, namely the photo-induced diffusion reorientation of azodyes, does not involve any photochemical or structural transformations of the molecules. This results in photoaligning films which are robust and possess good aligning properties making them particularly suitable for the new generation of liquid crystal devices. Photoalignment of Liquid Crystalline Materials covers state-of-the-art techniques and key applications, as well as the authors' own diffusion model for photoalignment. The book aims to stimulate new research and development in the field of liquid crystalline photoalignment and in so doing, enable the technology to be used in large scale LCD production. Key features: Provides a full examination of the mechanisms of photoalignment. Examines the properties of liquid crystals during photoalignment, with particular reference made to the effect on their chemical structure and stability. Considers the most useful photosensitive materials and preparation procedures suitable for liquid crystalline photoalignment. Presents several methods for photoalignment of liquid crystals. Compares various applications of photoalignment technology for in-cell patterned polarizers and phase retarders, transflective and micro displays, security and other liquid crystal devices. Through its interdisciplinary approach, this book is aimed at a wide range of practising electrical engineers, optical engineers, display technologists, materials scientists, physicists and chemists working on the development of liquid crystal devices. It will also appeal to researchers and graduate students taking courses on liquid crystals or display technologies. The Society for Information Display (SID) is an international society, which has the aim of encouraging the development of all aspects of the field of information display. Complementary to the aims of the society, the Wiley-SID series is intended to explain the latest developments in information display technology at a professional level. As If By Chance Kevin Reed Donley, 2023-12-21 The age of print was begun by Johannes Gutenberg in 1440 in Mainz, Germany. His invention of the mechanized and mass production of print replaced the previous handwriting of the scribes and was a transformative achievement. It was both the product of and a catalyst for far-reaching intellectual, social, and political changes that began during the Renaissance and continued for centuries right up to the present. The age of electronic media was begun by Steve Jobs in 1985 in Cupertino, California. His integration of the elements of desktop publishing--personal computer, page-layout software, page-description language, and laser printer--replaced the previous photomechanical processes of printing and was a transformative achievement. It was both the product of and a catalyst for the intellectual, social, and political changes during the digital revolution that will extend for generations into the future. This book discusses these two bookends in the age of print. It follows the transitions and stages of innovation in printing between the fifteenth and twenty-first centuries and shows how the inventors responsible for this progress are bound together in a chain of revolutionary technical change called disruptive continuity. While the works of Gutenberg and Jobs are separated by more than five centuries, there are striking parallels and differences between these two innovations. They both sparked the quantitative expansion of literacy and the spread of knowledge around the world. However, the emergence of electronic publishing--especially in its present-day social media forms--has brought a vast increase in the consumption of information while also heralding a qualitative transformation that places the tools of wireless and mobile multimedia publishing into the hands of billions of people on earth. Much in the same way that there was a historical lag between Gutenberg's invention and the full impact of printing on the world, so too in our own time, the long-term societal consequences of electronic publishing have yet to be realized.
