iPads® in the Library Joel A. Nichols, 2013-06-13 Looking for a programming guide for computer tablet use in the library setting? This book provides detailed plans and instructions with specific literacy goals for child, teen, and adult audiences—exactly what librarians seeking to integrate iPad and other tablet use into their programs need. Tablet computers are fast becoming a ubiquitous technology. These devices also represent a unique opportunity for librarians and teachers because they are relatively affordable, easy to configure and maintain, and highly adaptable. Written by a practicing digital literacy instruction librarian who is also a trained children's librarian, this book offers 50 practical programming scenarios that librarians can use to integrate iPads or other tablet devices into their programming, offering different plans for toddlers and pre-K child, school-aged patrons, teenagers, adults, and even seniors. The plans provide easy-to-follow, step-by-step instructions and are designed to be easily adaptable to serve specific audiences. The book serves as a unique resource that helps librarians address digital literacy and bridge the digital divide by focusing on—and catering to—the needs of many age groups. Author Joel A. Nichols also provides annotated lists of apps that present librarians new to tablet computing simple and effective ways of integrating an iPad into their programs.

Geophysics has been playing an important role in exploring the earth, locating vital resources and promoting the development of society. This book covers a range of topics including the exploration of modern resources, such as ore deposits, coal mines, shale gas and geothermal power, and the monitoring of geological disasters, including the rock-soil body, ground deformation, mines, specific rock-soil engineering disasters, desertification of land and environmental abnormalities. This book not only offers a valuable resource for geophysical researchers; it also demonstrates how geophysics theories and methods can be practically implemented to protect our environment and promote the development of human society.

Two Moons of Earth: Beyond Desolation Norman Couse, 2014-12-01 “It’s the early hours of the morning when Lane is awoken by a bright light and searing pain. He opens his eyes but nothing more; unable to either scream with pain, or move from it. Fear grips his heart and his mind, as he sees the earth around him and the tree above him slowly start to dissolve ...” Here we are once again with John and his friends travelling on into more new and marvellous lands. Making new friendships along the way but with heartache and loss intertwined. They travel far until they finally come to a place – a border. A border so terrifying, so feared by all: humans, animals and greenem alike, that even the bravest perish within moments, if fool enough to cross. But it is also where all the answers lie ... and a life-changing decision must be made

STEM of Desire, 2019-01-14 STEM of Desire: Queer Theories and Science Education locates, creates, and investigates intersections of science,

technology, engineering, and mathematics (STEM) education and queer theorizing. Manifold desires—personal, political, cultural—produce and animate STEM education. Queer theories instigate and explore (im)possibilities for knowing and being through desires normal and strange. The provocative original manuscripts in this collection draw on queer theories and allied perspectives to trace entanglements of STEM education, sex, sexuality, gender, and desire and to advance constructive critique, creative world-making, and (com)passionate advocacy. Not just another call for inclusion, this volume turns to what and how STEM education and diverse, desiring subjects might be(come) in relation to each other and the world. *STEM of Desire* is the first book-length project on queering STEM education. Eighteen chapters and two poems by 27 contributors consider STEM education in schools and universities, museums and other informal learning environments, and everyday life. Subject areas include physical and life sciences, engineering, mathematics, nursing and medicine, environmental education, early childhood education, teacher education, and education standards. These queering orientations to theory, research, and practice will interest STEM teacher educators, teachers and professors, undergraduate and graduate students, scholars, policy makers, and academic libraries. Contributors are: Jesse Bazzul, Charlotte Boulay, Francis S. Broadway, Erin A. Cech, Steve Fifield, blake m. r. flessas, Andrew Gilbert, Helene Götschel, Emily M. Gray, Kristin L. Gunckel, Joe E. Heimlich, Tommye Hutson, Kathryn L. Kirchgasler, Michelle L. Knaier, Sheri Leafgren, Will Letts, Anna MacDermut, Michael J. Reiss, Donna M. Mobile Learning Scott McQuiggan, Jamie McQuiggan, Jennifer Sabourin, Lucy Kosturko, 2015-03-09 Explore the game-changing technology that allows mobile learning to effectively reach K-12 students *Mobile Learning: A Handbook for Developers, Educators and Learners* provides research-based foundations for developing, evaluating, and integrating effective mobile learning pedagogy. Twenty-first century students require twenty-first century technology, and mobile devices provide new and effective ways to educate children. But with new technologies come new challenges—therefore, this handbook presents a comprehensive look at mobile learning by synthesizing relevant theories and drawing practical conclusions for developers, educators, and students. Mobile devices—in ways that the laptop, the personal computer, and netbook computers have not—present the opportunity to make learning more engaging, interactive, and available in both traditional classroom settings and informal learning environments. From theory to practice, *Mobile Learning* explores how mobile devices are different than their technological predecessors, makes the case for developers, teachers, and parents to invest in the technology, and illustrates the many ways in which it is innovative, exciting, and effective in educating K-12 students. Explores how mobile devices can support the needs of students Provides examples, screenshots, graphics, and visualizations to enhance the material presented in the book Provides developers with the background necessary to create the apps their audience requires Presents the case for mobile learning in and out of classrooms as early as preschool Discusses how mobile learning enables better educational opportunities for the visually impaired, students with Autism, and adult learners. If you're a school administrator, teacher, app developer, or parent, this topical book

provides a theoretical, well-researched discussion of the pedagogical theory and mobile learning, as well as practical advice in setting up a mobile learning strategy.

Learning from Animations in Science Education Len Unsworth, 2020-11-10 This book examines educational semiotics and the representation of knowledge in school science. It discusses the strategic integration of animation in science education. It explores how learning through the creation of science animations takes place, as well as how animation can be used in assessing student's science learning. Science education animations are ubiquitous in a variety of different online sites, including perhaps the most popularly accessed YouTube site, and are also routinely included as digital augmentations to science textbooks. They are popular with students and teachers and are a prominent feature of contemporary science teaching. The proliferation of various kinds of science animations and the ready accessibility of sophisticated resources for creating them have emphasized the importance of research into various areas: the nature of the semiotic construction of knowledge in the animation design, the development of critical interpretation of available animations, the strategic selection and use of animations to optimize student learning, student creation of science animations, and using animation in assessing student science learning. This book brings together new developments in these research agendas to further multidisciplinary perspectives on research to enhance the design and pedagogic use of animation in school science education. A versatile and multi-faceted guide, *Best STEM Resources for NextGen Scientists: The Essential Selection and User's Guide* serves as a readers' advisory and collection development resource for youth services and school librarians seeking to bring STEM-related titles into their collections and introduce teachers and young readers to them. In addition, the author offers a selection of professional readings for librarians and media specialists who wish to further expand their knowledge.

Project MK-Ultra and Mind Control Technology Axel Balthazar, 2017-05-04 People around the world claim to be victims of mind control technology. Medical professionals are quick to marginalize these targeted individuals and

diagnose them with mental illness. Unfortunately, most people are oblivious to the historical precedent for the practice of mind control and the patented technology that exists in the field. This book includes a compilation of the government's documentation on MK-Ultra, the CIA's mind control experimentation on unwitting human subjects; all documentation on this program was ordered destroyed by CIA Director Richard Helms in 1973, but a cache of records survived and were made public through a Freedom of Information Act request in 1977. It also contains over 150 patents pertaining to a wide variety of subjects: artificial telepathy (voice-to-skull technology), behavior modification through radio frequencies, directed energy weapons, electronic monitoring, implantable nanotechnology, brain wave manipulation, nervous system manipulation, neuroweapons, psychological warfare, satellite terrorism, subliminal messaging, and more. A must-have reference guide for targeted individuals and anyone interested in the subject of mind control technology. The experiments and technology described herein reveal the government's activities in a variety of fields utilizing an assortment of methodologies. Subjects covered include: Drugs; Hypnosis; Subconscious Isolation; Extrasensory Perception; Victims; Mind Control Technology; Artificial Telepathy; Behavior Modification; Nervous System Manipulation; Mind Manipulation; Mental Monitoring; Directed Energy Weapons; Electronic Surveillance; Implants and Nanotech; Subliminal Messaging; and more.
