Functional Communication Training for Problem Behavior Joe Reichle,David P. Wacker,2017-04-26 Children and adolescents with moderate and severe disabilities often have communication challenges that lead them to use problem behavior to convey their desires. This is the most comprehensive contemporary volume on functional communication training (FCT)--the individualized instructional approach that teaches a child socially acceptable communicative alternatives to aggression, tantrums, self-injury, and other unconventional behaviors. The expert authors provide accessible, empirically based guidelines for implementing FCT, and tips for overcoming obstacles. Grounded in the principles of applied behavior analysis, the book includes detailed strategies for developing a support plan, together with illustrative case examples.

ABCs of z/OS System Programming Paul Rogers,Juha Vainikainen,IBM Redbooks,2012-02-07 A major goal of operating systems is to process jobs while making the best use of system resources. Thus, one way of viewing operating systems is as resource managers. Before job processing, operating systems reserve input and output resources for jobs. During job processing, operating systems manage resources such as processors and storage. After job processing, operating systems free all resources used by the completed jobs, making the resources available to other jobs. This process is called resource management. There is more to the processing of jobs than the managing of resources needed by the jobs. At any instant, a number of jobs can be in various stages of preparation, processing, and post-processing activity. To use resources efficiently, operating systems divide jobs into parts. They distribute the parts of jobs to queues to wait for needed resources. Keeping track of where things are and routing work from queue to queue is called workflow management, and is a major function of any operating system. JES3 considers job priorities, device and processor alternatives, and installation-specified preferences in preparing jobs for processing job output. This IBM® Redbooks® publication describes a JES3 environment that includes the following: - Single-system image - Workload balancing - Availability - Control flexibility - Physical planning flexibility.

Practice R Edgar J. Treischl,2023-05-08 Many students learn to analyze data using commercial packages, even though there is an open-source software with cutting-edge possibilities: R, a programming language with countless cool features for applied empirical research. Practice R introduces R to social science students, inspiring them to consider R as an excellent choice. In a non-technical pragmatic way, this book covers all typical steps of applied empirical research. Learn how to prepare, analyze, and visualize data in R. Discover how to collect data, generate reports, or automate error-prone tasks. The book is accompanied by an R package. This provides further learning materials that include interactive tutorials, challenging you with typical problems of applied research. This way, you can immediately practice the knowledge you have learned. The package also includes the source code of each chapter and templates that help to create reports. Practice R has social science students in mind, nonetheless a broader audience may use Practice R to become a proficient R user.

The Powers of Attention, Attraction, and Intention In Field Control Therapy Steven R. Tonsager,FCT Practitioner,2015-11-20 As toxins gradually build up in the body, health issues can begin to appear. Healthy tissues show a different field than unhealthy tissue, and Field Control Therapy, or FCT, works with such energy fields. Steven Tonsager, one of the most active practitioners of FCT, shares his work, which led him to form theories about the power of energy medicine in treating patients and his own life. Although Steven was influenced by FCT founder Dr. Savely Yurkovsky, Dr. David Hawkins, and Dr. William Tiller, he explores new territory in the book, giving FCT practitioners and others powerful, practical tools and strategies to uncover insights into the cause and treatments of various health issues. In The Powers of Attention, Attraction, and Intention in Field Control Therapy: My Pathway of Adventure, Discovery, and Healing, Steven offers the following: • New ideas to help patients understand differences between conventional and informational medicine by providing clinical examples. • New methods for FCT practitioners to test patients to improve results, as well as new ways to make FCT remedies and administer them to patients. • Additional concepts to connect FCT testing with toxicological principles. • Practical methods to apply MEMON technology for patients with sensitivity to electromagnetic fields produced by technology. Steven, who hopes his book will inspire others to integrate FCT into their professional and personal lives, also details his path of discovery during his work with patients in his sometimes irreverent style, describing the transformation in his thinking after administering more than 10,000 FCT tests. Those findings led to discoveries explored in the last portion of the book, going beyond current FCT methods and theories.

Machine Learning with R, the tidyverse, and mlr Hefin Rhys,2020-03-20 Summary Machine learning (ML) is a collection of programming techniques for discovering relationships in data. With ML algorithms, you can cluster and classify data for tasks like making recommendations or fraud detection and make predictions for sales trends, risk analysis, and other forecasts. Once the domain of academic data scientists, machine learning has become a mainstream business process, and tools like the easy-to-learn R programming language put high-quality data analysis in the hands of any programmer. Machine Learning with R, the tidyverse, and mlr teaches you widely used ML techniques and how to apply them to your own datasets using the R programming language and its powerful ecosystem of tools. This book will get you started! Purchase of the print book includes a free eBook in PDF, Kindle, and ePub formats from Manning Publications. A Digital Phase Locked Loop based Signal and Symbol Recovery System for Wireless Channel Basab Bijoy Purkayastha,Kandarpa Kumar Sarma,2015-01-29 The book reports two approaches of implementation of the essential components of a Digital Phase Locked Loop based system for dealing with wireless channels showing Nakagami-m fading. It is mostly observed in mobile communication. In the first approach, the structure of a Digital phase locked loop (DPLL) based on Zero Crossing (ZC) algorithm is proposed. In a modified form, the structure of a DPLL based systems for dealing with Nakagami-m fading based on Least Square Polynomial Fitting Filter is proposed, which operates at moderate sampling frequencies. A sixth order Least Square Polynomial Fitting (LSPF) block and Roots Approximator (RA) for better phase-frequency detection has been implemented as a replacement of Phase Frequency Detector (PFD) and Loop Filter (LF) of a traditional DPLL, which has helped to attain optimum performance of DPLL. The results of simulation of the proposed DPLL with Nakagami-m fading and QPSK modulation is discussed in detail which shows that the proposed method provides better performance than existing systems of similar type.
