No Fear Tony Perkins, 2015-09-08 This book heralds a new generation of Christians who are more than bold...they are fearless! No Fear draws you inside the stories of young, ordinary believers who, despite incredible opposition, courageously stand up for God's truth. Tony Perkins pairs each story with a biblical example and gives practical ideas for building a "no fear" perspective every day. Today, followers of Jesus Christ face more opposition to their beliefs than any generation in American history. Yet even in such a hostile cultural and political environment, it is an exciting time to stand firm in the faith. You have been chosen to live in this important hour, and reading these stories will inspire you to the same kind of courage. So what are you waiting for? "Tony Perkins has discovered a new generation of young people who love following God more than the crowd...You will discover there is still hope for America and the world after reading their stories in No Fear!" —Todd Starnes, Fox News Channel "No Fear...is a must-read book that will inspire a courageous heart in tomorrow's movers and shakers. —Dana Loesch, nationally syndicated radio host, author, host BlazeTV "As the world continues to spiral into an anti-Christian age, it's important to empower our young people with the strength and conviction to hold fast to the teachings of Christ, and No Fear does just that." —Dr. Jack Graham, Senior Pastor, Prestonwood Baptist Church Includes discussion questions after each chapter.

FIRST Robots: Aim High Vince Wilczynski, Stephanie

Slezycki, Woodie Flowers, 2007-05-01 Personal robots are about as advanced today as personal computers were on the eve of the first IBM PC in the early 1980s. They are still the domain of hobbyists who cobble them together from scratch or from kits, join local clubs to swap code and stage contests, and whose labor of love is setting the stage for a technological revolution. This book will deconstruct the 30 regional winning robot designs from the FIRST Robotics Competition in 2006. The FIRST Robotics Competition (held annually and co-founded by Dean Kamen and Woodie Flowers) is a multinational competition that teams professionals and young people to solve an engineering design problem in an intense and competitive way. In 2005 the competition reached close to 25,000 people on close to 1,000 teams in 30 competitions. Teams came from Brazil, Canada, Ecuador, Israel, Mexico, the U.K., and almost every U.S. state. The competitions are high-tech spectator sporting events that have gained a loyal following because of the high caliber work featured. Each team is paired with a mentor from such companies as Apple, Motorola, or NASA (NASA has sponsored 200 teams in 8 years). This book looks at 30 different robot designs all based on the same chassis, and provides in-depth information on the inspiration and the technology that went into building each of them. Each robot is featured in 6-8 pages providing readers with a solid understanding of how the robot was conceived and built. There are sketches, interim drawings, and process shots for each robot.

The New Cool Neal Bascomb, 2011 A report on genius inventor Dean Kaman's FIRST program follows a team of brilliant, misfit high school students through the program's 2009 robotics competition, during which the teens under the guidance of a dedicated teacher confronted other hopefuls in stadiums throughout the country.

FIRST Robotics Nancy Benovich Gilby, 2015-08-01 Makers of all ages are creating robots on their own. In this book, students learn more about this recent innovation through detailed explanations built to foster creativity and critical thinking. Fun, engaging text introduces readers to new ideas and builds on maker-related concepts they may already know. Additional tools, including a glossary and an index, help students learn new vocabulary and locate information.

Round-Robin Test on Creep Behaviour in Cracked Sections of FRC: Experimental Program, Results and Database Analysis Aitor Llano-Torre, Pedro Serna, 2021-06-20 The book presents the work of the RILEM Technical Committee 261-CCF, which organized the challenging International Round Robin Test (RRT) on the creep behaviour of Fibre Reinforce Concrete (FRC) cracked specimens. Although different creep test methodologies have been developed in recent years, the absence of a standardised creep methodology hindered general comparisons. Therefore, the RILEM TC 261-CCF launched an ambitious international RRT program to improve the knowledge on long-term behaviour of cracked sections of FRC and assess all the different testing methodologies, assuming the big variability of testing criteria among the scientific community. The participation of 19 laboratories across 20 institutions in 14 countries all over the world enabled the realisation of the largest experimental campaign on creep in the cracked state. As a result of the RRT, an

extensive database of creep test results was created containing comprehensive information from 124 cracked FRC specimens tested using different creep testing procedures in agreed conditions. The book will benefit academics and practitioners interested in the long-term behaviour of FRC since it served as basis for the recently published RILEM Recommendation on creep testing procedure and represents the current knowledge on creep in cracked FRC specimens.
