Getting Started with GEO, CouchDB, and Node.js Mick Thompson,2011-07-29 Today's mobile devices have GPS and standard APIs to give you access to coordinates—but what can you do with that data? With this concise book, application developers learn how to work with location data quickly and easily, using Node.js, CouchDB, and other open source tools and libraries. Node.js makes it simple to run event code on the Web, and the CouchDB document-oriented database lets you store location data and perform complex queries on it quickly. You'll learn how to get started with these tools, and then use them together to build an example project called MapChat, using HTML and JavaScript code samples. Learn how to serve dynamic content with Node.js, and use its asynchronous IO to handle several requests at once Become familiar with GeoJSON, Geohash, and the Geospatial Data Abstraction Library (GDAL) for working with spatial data Build geospatial indexes using the GeoCouch branch of CouchDB Combine these tools to build a project that lets users post real-time chat messages tagged with their current map location

Geo-Graphics Regina Giménez,2022-05-24 Our universe is brimming with secrets, and surprising curiosities. Here readers will learn the answers to all the questions they've asked themselves: What does the Sun look like from different planets in our galaxy? Why doesn't the Moon always appear the same? What is the largest river on Earth? And the highest mountain? In Geo-Graphics, our world becomes transformed by acclaimed artist Regina Giménez, into 96 pages of gorgeous shapes and colors. Planets and stars, continents and islands, rivers and lakes, volcanos and hurricanes ... here they are presented as circles, polygons, lines, spirals, and accompanying facts that explain the world around us. This special and unusual atlas is a marriage of science and art like no other.

Geo-Platinum 87 H.M. Prichard,Philip J. Potts,2012-12-06 The Geo-Platinum 87 Symposium, held at the Open University during April 1987, was designed as a forum for presentation of new research results on the occurrence, genesis, geochemistry, mineralogy and analysis of the platinum-group elements (PGE). With the support of the Open University and the Mineral Industry Research Organisation, the symposium was attended by 115 representatives of university departments, research institutions and members of the mining and mineral exploration industries. An introduction to the symposium was provided by two invited papers from C. J. Morrissey (Riofinex North) and C. R. N. Clark (Johnson Matthey) which were designed to give perspective to the goals of PGE research work. The first of these papers gave a provocative insight into the aims and objectives of an exploration manager, examining the influence of supply, demand and perceived world reserves on exploration strategy. The second invited paper gave a valuable view of the industrial uses, market trends and predicted changes in the commercial value of the platinum-group elements from the standpoint of a refining company and supplier. These invited papers are reproduced in this volume and are followed by twenty four full papers and twenty abstracts that reflect the wide range of research topics presented at the symposium.

La+ Geo Karen M'Closkey,2020-11 GEO--Earth--is a word that simultaneously signifies something vast and elemental. It refers to both the planet on which we live and the soil that sustains us. GEO is the physical and representational bedrock of landscape architecture--the foundation of many disciplines from which we draw our knowledge. Geography, Geology, and Geometry, in particular, are fundamental to our discipline's intellectual core. And now, we seem ever more entangled in GEO as some scholars across the sciences and humanities argue that humans should be recognized as agents of change at geologic time scales. * Guest editors Karen M'Closkey and Keith VanDerSys explore site surveying and sensing technologies as part of an expanded toolkit for landscape architects to bring environmental patterns down to earth and into view. * Designer Robert Gerard Pietrusko reveals the covert militaristic agendas of early aerial land cover interpretation.* Geographer Matthew W. Wilson revisits the rise of critical cartography within geography in the 1980s and '90s.* Media scholar Lisa Parks describes the politics of vertical mediation by recounting the importance of activists' use of drone-captured video to document both the protests against the construction of an oil pipeline through tribal lands, as well as the aggressive

countermeasures taken by law enforcement to squelch the protests. * Jeffrey S. Nesbit and David Salomon, rocket launch pads provide a vehicle to unpack the relationship between terrestrial and extraterrestrial territories.* Geographers Douglas Robb and Karen Bakker caution against the voyeuristic tendencies enabled by the satellite gaze.* Through illustrated Geostories, Rania Ghosn imaginatively engages the global commons of outer space and oceans.* Designer Matthew Ransom examines the tension between grassroots organizations and fracking industries in Pennsylvania.* Author and activist Lucy R. Lippard takes us on an aerial journey across the United States.* Historian and geographer B.W. Higman traces our modern predilections towards flatness.* Through a remaking of Eugène Viollet-le-Duc's Mont Blanc studies, landscape architect Aisling O'Carroll exposes the imposition of geometric rationalization on nature. * Noah Heringman revisits the sublime in 18th-century landscape design, offering parallels to today's Anthropocene discourses about environmental depletion.* Shannon Mattern examines how rocks are collected, examined, and displayed as objects of spectacular brilliance - objects that ultimately reflect back on us by illuminating the histories of oppression embedded in their extraction.* LA+ GEO also includes interviews with the celebrated author of *After the Map*, William Rankin, author and citizen-sensing visionary Jennifer Gabrys, and New Zealand-based media artist and author Janine Randerson.

Introduction to Integrated Geo-information Management Seppe Cassettari,2012-12-06 This book was inspired by the revolution in geographical information systems during the late 1970s and 1980s which introduced to many the concept of computer-based information systems for spatially referenced data. The map, the aerial photograph and the satellite image were wedded to a database of textual information through the rapidly developing technology of powerful graphics workstations. This brought the skills of the geographer to a wide range of disciplines and specialists. But this book is not about the basic concepts of geographical information systems themselves. It is not about hardware or software per se, nor the integral concepts of geo-referenced data handling built into such systems; these are to be found in a growing number of introductory texts on the subject. Instead the focus of this book is on of geo-information management. the much wider issues While an understanding of the systems, their capabilities and limitations is necessary, of greater importance to the long term application of geographical understanding to problem solving is the wider context of information handling. Spatial data are becoming increasingly important in understanding the issues that confront the world. Chapter 1 is a discussion of the general issues which relate to management and information systems. It concludes with review of spatial decision support systems which are of increasing importance to the GIS community.

Geo-Spatial Technologies in Urban Environments Ryan R. Jensen,Jay D. Gatrell,Daniel McLean,2007-05-11 This book expands the current frame of reference of remote sensing and geographic information specialists to include an array of socio-economic and related planning issues. Using remotely sensed data, the project explores the efficacy and policy implications of new approaches toward analyzing data, integrates approaches from human geography and explores the utility of employing geo-technologies to further the politics of local growth and smart growth coalitions, as in green space programs.

Geo-Information Technology in Earth Resources Monitoring and Management Varun Narayan Mishra, Praveen Kumar Rai, Prafull Sigh, 2021 Earth resources are the precious assets that provide living space for human beings. In the last few decades, the pressure on earth resources has increased due to anthropogenic activities and rapid industrialization. The sustainable management of earth resources requires reliable, accurate, and timely information at different observational scales. Geo-information technology is an efficient tool for acquiring information required for environmental protection, earth resources monitoring, and addressing the issues associated with sustainable development and management. It offers an influential and capable tool for mapping, monitoring, modeling, and management of earth resources. Many researchers have reported their findings and operational applications of direct relevance to the management of earth resources with the launch of imaging satellites in the 1970s. However, few studies have been reported to understand the core science and research basics, as there are larger issues of capacity building to use geo-information technology in sustainable development and management of earth resources. There is also a fundamental gap between the theoretical concepts and the operational use of these advanced tools. This could be resolved by providing a broad range of applications of this technology to the scientific and research community in the field of geospatial technologies and allied subjects. This book, entitled Geo-Information Technology in Earth Resources Monitoring and Management, deals with the challenges for sustainable management and development of earth resources with a focus on India and other countries around the world. The chapters are written by prominent academicians, researchers, and experts in the field of geo-information technology and related subjects. This book is a collection of chapters providing a multi-disciplinary overview for academicians, researchers, scientists, administrators, policymakers, social scientists, and professionals involved in the various aspects of earth resources development, planning, and management. The aim of this book is to replenish the gap in the available literature on the subject by bringing together the concepts, theories, and experiences of specialists and professionals in this field--

Leo Geo and His Miraculous Journey Through the Center of the Earth Jon Chad, 2013-12-03 An intrepid explorer climbs down, down, down the page as he voyages through the center of the earth in this unusually inventive comic adventure. Intrepid explorer Leo Geo is heading off on a mission into the unknown. With science as his sidekick, he intends to tunnel his way to the center of the earth. Of course, things never turn out quite the way you expect when you're burrowing your way through the earth's layers. Before long, Leo is forced to leave his tunneling machine behind, and he climbs, crawls, and falls to his destination while dodging giant centipedes, man-eating quadclops, and an evil army of subterranean malvisors bent on invading the surface. Kids will be drawn in by the unusual format of this inventive comic, following Leo as he climbs deeper and deeper into a very long and skinny book—and they may just learn a few things about geology as they go.

Geo-Topology Fivos Papadimitrou, 2024-01-05 Geo-Topology is an exploration of the depth and breadth of the relationships between Geography and Topology, with applications ranging from Landscape Geography to Social Geography and from Spatial Analysis to Geospatial Technologies. It shows how topics of geographical research (landscapes, borders, spatial social relationships etc) can be examined by using mathematical concepts and methods of Topology, exposing the realm of geo-topological modelling and visualization through Point-Set Topology, Knot Theory, Reeb graphs, Topological Surfaces (i.e. Möbius bands and Klein bottles), Differential Topology, Network Analysis, Combinatorial Topology, Braid Theory and Ultrametric Topology. Besides geographers, this book is a trove of new ideas for landscape ecologists, mathematicians, data scientists, sociologists, psychologists, anthropologists and educators. Geo-Topology is a systematic introduction to topological thinking in Geography, also by highlighting the significance of Topology for Geographical Education, as well as for the Philosophy and Epistemology of Geography.

Large-Scale Visual Geo-Localization Amir R. Zamir, Asaad Hakeem, Luc Van Gool, Mubarak Shah, Richard Szeliski, 2016-07-05 This timely and authoritative volume explores the bidirectional relationship between images and locations. The text presents a comprehensive review of the state of the art in large-scale visual geo-localization, and discusses the emerging trends in this area. Geo-information Mathias Lemmens, 2013-11-11 Geomatics, the handling and processing of information and data about the Earth, is one geoscience discipline that has seen major changes in the last decade, as mapping and observation systems become ever more sensitive and sophisticated. This book is a unique and in-depth survey of the field, which has a central role to play in tackling a host of environmental issues faced by society. Covering all three strands of geomatics - applications, information technology and surveying - the chapters cover the history and background of the subject, the technology employed both to collect and disseminate data, and the varied applications to which geomatics can be put, including urban planning, assessment of biodiversity, disaster management and land administration. Relevant professionals, as well as students in a variety of disciplines such as geography and surveying, will find this book required reading. This rapidly developing field uses increasingly complex and accurate systems. Today, technology enables us to capture geo-data in full 3D as well as to disseminate it via the Web at the speed of light. We are able to continuously image

the world from space at resolutions of up to 50 cm. Airborne LiDAR (laser surveying) sensors can be combined with digital camera technology to produce geometrically correct images of the Earth's surface, while integrating these with large-scale topographic maps and terrestrial as well as aerial images to produce 3D cityscapes that computer users can explore from their desktops.
