Introduction to Information Retrieval Christopher D. Manning,Prabhakar Raghavan,Hinrich Schütze,2008-07-07 Class-tested and coherent, this textbook teaches classical and web information retrieval, including web search and the related areas of text classification and text clustering from basic concepts. It gives an up-to-date treatment of all aspects of the design and implementation of systems for gathering, indexing, and searching documents; methods for evaluating systems; and an introduction to the use of machine learning methods on text collections. All the important ideas are explained using examples and figures, making it perfect for introductory courses in information retrieval for advanced undergraduates and graduate students in computer science. Based on feedback from extensive classroom experience, the book has been carefully structured in order to make teaching more natural and effective. Slides and additional exercises (with solutions for lecturers) are also available through the book's supporting website to help course instructors prepare their lectures.

Extreme IR Ziv J Haskal,2023-07-12 This book presents 101 unique and extraordinary cases in interventional radiology (IR) and endovascular therapy. Extreme IR is an internationally recognized event that Dr. Ziv Haskal created and held in early 2000's at mountaintop venues, then at successive Society of Interventional Radiology annual conference meetings, and later, published monthly within the Journal of Vascular and Interventional Radiology (JVIR) for which he was editor-in-chief for 10 years. The ever-popular Extreme IR sessions at conferences have drawn more than 5,000 attendees. Cases are presented in a rapid-fire format designed to maximize relevancy, excitement, and unique knowledge. This book aims to replicate that experience for a wider audience. The book is divided into twelve sections, including venous, portal hypertension, and biliary, arterial, oncology, etc. cases. Most cases span two pages and include large, illustrative images with bullet-pointed text to present essential information in a concise and focused fashion. The global list of authors exemplifies the extraordinary breadth of the cases for interventional radiologists, endovascular specialists. It is ideal for interventional radiologists and endovascular specialists at all levels of seniority and training.

Alker and IR Renée Marlin-Bennett,2012-03-12 International Relations have rarely been considered a synthesis of humanistic and social sciences approaches to understand the complex connections of a global, and globalizing, world. One of the few scholars to have accomplished this creative blend was Hayward R. Alker. Alker and IR presents a set of visionary and original essays from scholars who have been profoundly influenced by Alker's approach to global studies. They build on the foundation he laid, demonstrating the practicality and usefulness of ethically grounded, theoretically informed and interdisciplinary research for producing knowledge. They show how substantive boundaries can be crossed and methodological rules rewritten in the search for a deeper, more contextualized approach to global politics. This book will be of interest to researchers and students of international relations and global politics.

Global IR Research Programme Deepshikha Shahi,2023-08-26 The Global IR research programme promulgates a borderless ecology of cultures that has only an inside without an outside. This borderless ecology of cultures reinvents the human condition (including the condition of 'the international') as perpetually interconnected at the level of consciousness. While Western-centric IR theories depend on (neo-)Kantian philosophies to emphasize the time-space bounded identities of human beings living in visibly divided phenomenal worlds, the de-Kantian philosophies of the Global IR research programme – exemplified by the Tianxia, Advaita, and Nishida Kitaro's Buddhism-inspired theories – recuperate the temporally-spatially indivisible phenomenal-noumenal flow of human life, thereby facilitating back-and-forth movement between the Westdominated 'one world' and the non-West-embodied 'many worlds'. The central objective of the book is to demonstrate how this back-and-forth movement offers opportunities to conceive of and found a new world order that recognizes the temporally-spatially indivisible human condition on earth. The book delineates a set of guiding principles to promote an innovative practice of theory-building and policy-making that transcends the geo-centric limitations of knowledge-production and knowledge-application, thereby establishing the futuristic foundation of the Global IR research programme.

Art and IR Theory Serdar Ş. Güner,2023-06-08 This book examines the correspondence between international relations (IR) theories of structural realism and constructivism and paintings, notably the artwork of Mark Rothko and Jackson Pollock, in a game theory setting. This interdisciplinary approach, through the lens of game theory and semiotics, permits different, enriched interpretations of structural realism and constructivism. These theories constitute an axis of debate between social and systemic approaches to international politics, as well as an axis of differentiation between scientific realism and positivism as philosophies of science. As such, the interpretations explored in this book contribute to what we know about international relations, how semiotics intersect with strategic uncertainty, and explains these interactions in the proposed games model.

The book's use of game theory and semiotics generate 'visual semiotic games' (VSGs) that shed light on the debate axes through strategic uncertainty, interactions, and players' interactive belief systems. VSGs will contribute to literature on experimental semiotics in the sense of players' coordination behavior, beliefs, and artistic evaluations. The equilibria, interpreted through branches of philosophy of mind and theories of explanation, will reveal possibilities of agreement among players about which artwork representing the theory at hand is the best, opening innovative research perspectives for the discipline of IR theory.

Study of the Market for IR Fibers

Weird IR David Bell Mislán, Philip Streich, 2018-05-19 The scholarly study of international relations tends to go over the same cases, issues, and themes. This book addresses this by challenging readers to think creatively about international politics. It highlights some of the strangest and rarest phenomena in diplomacy and world politics. Comprised of a series of vignettes and organized by common themes like nonsensical borders, quasi-countries, and diplomatic taboos, *Weird IR* encourages readers to think critically about the discipline without losing one's sense of humor completely.

Gas-Phase IR Spectroscopy and Structure of Biological Molecules Anouk M. Rijs, Jos Oomens, 2015-06-03 The series Topics in Current Chemistry presents critical reviews of the present and future trends in modern chemical research. The scope of coverage is all areas of chemical science including the interfaces with related disciplines such as biology, medicine and materials science. The goal of each thematic volume is to give the non-specialist reader, whether in academia or industry, a comprehensive insight into an area where new research is emerging which is of interest to a larger scientific audience. Each review within the volume critically surveys one aspect of that topic and places it within the context of the volume as a whole. The most significant developments of the last 5 to 10 years are presented using selected examples to illustrate the principles discussed. The coverage is not intended to be an exhaustive summary of the field or include large quantities of data, but should rather be conceptual, concentrating on the methodological thinking that will allow the non-specialist reader to understand the information presented. Contributions also offer an outlook on potential future developments in the field. Review articles for the individual volumes are invited by the volume editors. Readership: research chemists at universities or in industry, graduate students.

Biointerface Characterization by Advanced IR Spectroscopy C.-M. Pradier, Y.J. Chabal, 2011-09-02 There is an increasing interest in research and applications of biosensors and bio-compatibility in relation to environmental protection, food and medical safety, implants, early detection of diseases and pollutant detection. This book describes how to characterise amino acids, protein or bacterial strain adsorption on metal and oxide surfaces by using infrared spectroscopy, in a vacuum, in the air or in an aqueous medium. Features description of the principles, experimental setups and parameter interpretation, and the theory for several advanced IR-based techniques for interface characterisation. Contains examples which demonstrate the capacity, potential and limits of the IR techniques. Helps finding the most adequate mode of analysis.--Publisher.

Analytical Applications of FT-IR to Molecular and Biological Systems J.R. Durig, 2012-12-06 In the past few years it has become apparent that Fourier Transform infrared spectroscopy is developing into an excellent technique for solving some of the very difficult problems encountered in analytical chemistry. The applications of FT-IR include the detection and identification of chemical components separated by gas chromatography techniques, determination of low concentration components in a mixture, and problems which have energy limitations such as water samples, opaque samples and biological systems. The lectures presented in this volume will be utilized at the NATO Advanced Study Institute in Florence, Italy from August 31 to September 12, 1980. These lectures are divided into three main sections: Instrumentation and Theory, Techniques, and Applications. The first section includes a basic introduction to interferometry and the operating parameters. The Techniques section consists of several lectures on accessories used in FT-IR, software and data systems, and special handling techniques. The third section contains an abundance of information on the applications of the FT-IR technique to inorganic and organic molecules, polymers, biological systems, solids and to the determination of molecular structures and conformational analyses. The contents of this volume should provide the reader with the present applications in this field as well as an indication of possible future trends. In general the lectures are of a pedagogical nature and are not to be considered as review articles.

Linearly Polarized IR Spectroscopy Bojidarka Ivanova, Tsonko Kolev, 2011-10-24 A technique that is useful in the study of pharmaceutical products and biological molecules, polarization IR spectroscopy has undergone continuous development since it first emerged almost 100 years ago. Capturing the state of the science as it exists today, *Linearly Polarized IR Spectroscopy: Theory and Applications for Structural Analysis* demonstrates how the technique can be properly utilized to obtain important information about the structure and spectral properties of oriented compounds. The book starts with the theoretical basis of linear-dichroic infrared (IR-LD) spectroscopy and then moves on to examine the background of the orientation method of colloid suspensions in a nematic host. It explores the orientation procedure itself, experimental design, and mathematical tools for the interpretation of the IR spectroscopic patterns. Next, the authors describe the structural elucidation of inorganic and organic compounds and glasses. Finally, they discuss applications in pharmaceutical analysis and the chemistry of dyes. Filled with more than 140 illustrations along with a color insert, the book explains both the scope of the polarized IR spectroscopy method as well as its limitations. A powerful source of information not only for specialists in IR spectroscopy, but also for those working in the field of structural analysis, this volume moves the field closer to developing an inherently classical method for the structural characterization of compounds.

Kautilya and Non-Western IR Theory Deepshikha Shahi, 2018-09-29 The ancient Indian text of Kautilya's Arthaśāstra comes forth as a valuable non-Western resource for understanding contemporary International Relations (IR). However, Kautilya's Arthaśāstra largely suffers from the problem of 'presentism', whereby present-day assumptions of the dominant theoretical models of Classical Realism and Neorealism are read back into it, thereby disrupting open reflections on Kautilya's Arthaśāstra which could retrieve its 'alternative assumptions' and 'unconventional traits'. This book attempts to enable Kautilya's Arthaśāstra to break free from the problem of presentism – it does so by juxtaposing the elements of continuity and change that showed up at different junctures of the life-history of both 'Kautilya's Arthaśāstra' and 'Eurocentric IR'. The overall exploratory venture leads to a Kautilyan non-Western eclectic theory of IR – a theory which moderately assimilates miscellaneous research traditions of Eurocentric IR, and, in addition, delivers a few innovative features that could potentially uplift not only Indian IR, but also Global IR.

Detectors and Sources for THz and IR Fedir F. Sizov, 2020-05-05 IR and THz technologies are widely used in security screening and surveillance, astronomy, spectroscopy, biomedicine, food and package inspection, detection of concealed weapons, vision through camouflage, etc. There are increasing demands for the fast transmission of large amounts of data. THz radiation penetrates dielectric materials like plastics, ceramics or cardboard allowing contact-free testing. Medical imaging technologies can provide guidance for surgeons in delimiting the margins of tumors, help clinicians to visualize diseased areas, etc. Keywords: THz and IR Detectors, THz and IR Sources, Superconducting Photon Detectors, Superconducting THz Detectors, Graphene-based Detectors, THz Sensors with Metamaterials, Photoconductive Antenna Detectors, Imaging, Communication, Spectroscopy, Sensing, Security Screening, Surveillance, Astronomy, Biomedicine, Food Inspection, Package Inspection, Concealed Weapons Detection, Transmission of Large Amounts of Data, Non-destructive Testing, Contact-free Testing, Medical Imaging Technologies.

Selected Applications of Modern FT-IR Techniques Nishikida,2019-07-05 This volume is intended to show beginners in modern Fourier Transform-Infrared analysis which technique of infrared analysis should be selected and how to use it to obtain certain information from the most common samples brought into research and analytical laboratories in production industries.

Spiral Galaxies in the Near-IR Dante Minniti,Hans-Walter Rix,2013-06-29 From June 7-9, 1995, the European Southern Observatory (ESO) and the Max Plank Institut fir Astrophysik (MPA) jointly held the Workshop on Spiral Galaxies in the Near-IR. This meeting took place at the ESO headquarters in Garching bei Miinchen, Germany. The weather waschanging, with the biergarten closed, but that did not stop 85 people from allover the world from attending the meeting. The three days were intensive, with talks and coffee and posters from 9 am to 6 pm, and very productive indeed for everyone. The topics covered the stellar populations of the Milky Way and other more distant spirals, the role of dust, the dynamics of spiral galaxies, and the nuclear activity seen at near-IR wavelengths. This volume presents the original contributions from the participants, including several papers that review the state-of-the-art knowledge in these various subjects. The editors would like to thank first and foremost Christina Stoffer, for she took care of everything. The meeting would not have been so successful without her expertise and efficiency. We are deeply indebted to the directors of MPA and ESO Science, Simon White and Jacqueline Bergeron, for their support and encouragement. We would also like to thank the other members of the scientific organizing committee: R. Genzel, K. Freeman, A. Moorwood, S. White, M. Rieke and E. Athannasoula, for their advice with the organization of the program. We also thank G. Rieke, R. Genzel, L. Athannasoula, A. Renzini and R.
