The Tree Identification Book George W. Symonds, 2013-05-28 The classic easy-reference field guide with more than 1500 photographs: “An almost foolproof practical reference book.” —Kirkus Reviews (starred review) This useful book for botanists, horticulturists, and nature lovers is made up of two parts: Pictorial Keys and Master Pages. The Keys are designed for easy visual comparison of details that look alike, narrowing the identification of a tree to one of a small group—the family or genus. Then, in the Master Pages, the species of the tree is determined, with similar details placed together to highlight differences within the family group, thus eliminating all other possibilities. All of the more than 1500 photographs were made specifically for use in this book and were taken either in the field or of carefully collected specimens. Where possible, details such as leaves, fruit, etc., appear in actual size, or in the same scale.

**The Psychology of Person Identification** Brian R. Clifford, Ray Bull, 2017-03-27 Originally published in 1978, the laws and procedures governing person identification parades, photofit pictures and the forms of questions asked to obtain a description, had been increasingly called into question. The problem had been highlighted by several well publicised court cases, and considered by the Devlin Committee. This book reviews the status of psychological knowledge at the time concerning the many aspects of person identification and scientifically evaluates the methods and procedures used. Contrary to the popular belief that identification is a simple affair, the authors use the theory and method of psychology to reveal the sources of the difficulties involved in recognising a once-seen person. Estimates of just how good a witness can be are drawn from laboratory studies using face photographs, from mock crime incidents, and from actual criminal cases, for reliability varies markedly in each of these three situations. Both an individual and a social perspective is taken of the eye-witnesses, and research into perception and memory, together with individual differences in such things as cognitive style, personality, suggestibility, age, sex, and ability to form both eidetic and memory images, are examined. The social aspects of stereotypes, the presence of other witnesses and the desire to be a ‘good witness’ are all discussed at length. Finally an extended examination of the possibility of voice parades and changes in identification procedures, together with man-machine interaction techniques, is undertaken.

The Art of Identification Rex Ferguson, Melissa M. Littlefield, James Purdon, 2021-07-12 Since the mid-nineteenth century, there has been a notable acceleration in the development of the techniques used to confirm identity. From fingerprints to photographs to DNA, we have been rapidly amassing novel means of identification, even as personal, individual identity remains a complex chimera. The Art of Identification examines how such processes are entangled within a wider sphere of cultural identity formation. Against the backdrop of an unstable modernity and the rapid rise and expansion of identificatory techniques, this volume makes the case that identity and identification are mutually imbricated and that our best understanding of both concepts and technologies comes through the interdisciplinary analysis of science, bureaucratic infrastructures, and cultural artifacts. With contributions from literary critics, cultural historians, scholars of film and new media, a forensic anthropologist, and a human bioarcheologist, this book reflects upon the relationship between the bureaucratic, scientific, and technologically determined techniques of identification and the cultural contexts of art, literature, and screen media. In doing so, it opens the interpretive possibilities surrounding identification and pushes us to think about it as existing within a range of cultural influences that complicate

the precise formulation, meaning, and reception of the concept. In addition to the editors, the contributors to this volume include Dorothy Butchard, Patricia E. Chu, Jonathan Finn, Rebecca Gowland, Liv Hausken, Matt Houlbrook, Rob Lederer, Andrew Mangham, Victoria Stewart, and Tim Thompson.

**Stock Identification Methods** Steven X. Cadrin, Lisa A. Kerr, Stefano Mariani, 2013-10-04 *Stock Identification Methods*, 2e, continues to provide a comprehensive review of the various disciplines used to study the population structure of fishery resources. It represents the worldwide experience and perspectives of experts on each method, assembled through a working group of the International Council for the Exploration of the Sea. The book is organized to foster interdisciplinary analyses and conclusions about stock structure, a crucial topic for fishery science and management. Technological advances have promoted the development of stock identification methods in many directions, resulting in a confusing variety of approaches. Based on central tenets of population biology and management needs, this valuable resource offers a unified framework for understanding stock structure by promoting an understanding of the relative merits and sensitivities of each approach. Describes 18 distinct approaches to stock identification grouped into sections on life history traits, environmental signals, genetic analyses, and applied marks Features experts' reviews of benchmark case studies, general protocols, and the strengths and weaknesses of each identification method Reviews statistical techniques for exploring stock patterns, testing for differences among putative stocks, stock discrimination, and stock composition analysis Focuses on the challenges of interpreting data and managing mixed-stock fisheries

**Cartridges and Firearm Identification** Robert E. Walker, 2012-11-26 At a time when crime scene television shows are all the rage amongst the civilian population, knowledge of firearm forensics is of paramount importance to crime scene analysts, police detectives, and attorneys for both the prosecution and the defense. *Cartridges and Firearm Identification* brings together a unique, multidisciplinary approach to questions that arise regarding ammunition and firearms within the context of investigation. Supplying essential practical information about firearms and ammunition in a clear, easy-to-follow format, this volume: Defines and depicts photographically all varieties of firearms Presents investigative concerns of firearms evidence from the perspectives of evidence preservation and safe handling procedures Introduces readers to the standards of measurement used to classify ammunition, including the significance of names, adjectives, and other descriptors used in conjunction with ammunition cartridges Categorizes and identifies ammunition head stamps from cartridges produced around the world Provides ammunition manufacturing practices for dozens of nations The text offers a methodology for the identification of unknown firearms as well as ammunition of questioned identity. The author explains the terminology and describes each group of firearms and the aspects that identify the weaponry—including property marks, proof marks, and patent dates. Lavishly illustrated, this comprehensive reference includes case studies to support the text, making it a premier reference for all those responsible for the complicated task of investigating firearms and cartridges.

Identification for Prediction and Decision Charles F. Manski, 2009-06-30 This book is a full-scale exposition of Charles Manski's new methodology for analyzing empirical questions in the social sciences. He recommends that researchers first ask what can be learned from data alone, and then ask what can be learned when data are combined with credible weak assumptions. Inferences predicated on weak assumptions, he argues, can achieve wide consensus, while ones that require strong assumptions almost inevitably are subject to sharp disagreements. Building on the foundation laid in the author's *Identification Problems in the Social Sciences* (Harvard, 1995), the book's fifteen chapters are organized in three parts. Part I studies prediction with missing or otherwise

incomplete data. Part II concerns the analysis of treatment response, which aims to predict outcomes when alternative treatment rules are applied to a population. Part III studies prediction of choice behavior. Each chapter juxtaposes developments of methodology with empirical or numerical illustrations. The book employs a simple notation and mathematical apparatus, using only basic elements of probability theory.

**Identity Crisis** Jim Harper, 2006-05-25 The advance of identification technology-biometrics, identity cards, surveillance, databases, dossiers-threatens privacy, civil liberties, and related human interests. Since the terrorist attacks of September 11, 2001, demands for identification in the name of security have increased. In this insightful book, Jim Harper takes readers inside identification-a process everyone uses every day but few people have ever thought about. Using stories and examples from movies, television, and classic literature, Harper dissects identification processes and technologies, showing how identification works when it works and how it fails when it fails. Harper exposes the myth that identification can protect against future terrorist attacks. He shows that a U.S. national identification card, created by Congress in the REAL ID Act, is a poor way to secure the country or its citizens. A national ID represents a transfer of power from individuals to institutions, and that transfer threatens liberty, enables identity fraud, and subjects people to unwanted surveillance. Instead of a uniform, government-controlled identification system, Harper calls for a competitive, responsive identification and credentialing industry that meets the mix of consumer demands for privacy, security, anonymity, and accountability. Identification should be a risk-reducing strategy in a social system, Harper concludes, not a rivet to pin humans to governmental or economic machinery.

**Physical Characteristics of Early Films as Aids to Identification** Camille Blot-Wellens, 2022-01-19 Any archivists who have held a piece of film in their hands, wondering how to go about identifying it, recognize the true value of film preservationist Harold Brown's work. In 1967 Brown delivered a pioneering lecture on the identification of early films at the annual Congress of the International Federation of Film Archives (FIAPF) in East Berlin. Years of working with Britain's National Film Archive collections, and the close examination of thousands of nitrate prints of the silent period, made Brown a leading

authority on early film identification, and an unsurpassed model of methodological consciousness in the archival field. In 1990, FIAF published Brown's *Physical Characteristics of Early Films as Aids to Identification*, an updated version and a continuation of his 1967 lecture. This publication has long been archivists' trusted companion, constituting a concentrated encyclopedia on all the information that can be discovered or verified through aspects of the film other than the actual projected image – such as perforation shapes; embossed and punched marks; stock manufacturers' and producers' edge marks; frame characteristics; title styles; and production serial numbers. It also included essays on key individual production companies of the silent era. Over the last 30 years, this manual – a basic typewritten 100-page volume (including 20 pages of black & white illustrations), with its easily recognizable red cover – has been an invaluable reference for film archivists and scholars. However, as Brown himself acknowledged in the 1990 edition, the manual was far from definitive. Camille Blot-Wellens, the editor of this new, expanded edition of Brown's 1990 book, belongs to the new generation of researchers who have used *Physical Characteristics* extensively in their work and have gathered considerable new information on the subject. This new edition is the result of a project she initiated in 2014 with FIAF's support. Brown's original text is now augmented with new original research on key film manufacturers and producers by Camille Bolt-Wellens and other leading archivists and researchers in the field. Richly illustrated (the book contains over 900 images, including 125 in full color), this new 336-page edition of Harold Brown's seminal manual will be welcomed by many, and will no doubt become a must-have working tool for many in the film archiving and academic fields.

**Ants of Florida** Mark Deyrup, 2016-10-14 Ants are familiar to every naturalist, ecologist, entomologist, and pest control operator. The identification of the 233 species of Florida ants is technically difficult, and information on Florida ants is dispersed among hundreds of technical journal articles. This book uses detailed and beautiful scientific drawings for convenient identification. To most Florida biologists ants are currently the most inaccessible group of conspicuous and intrusive insects. This book solves the twin problems of ant identification and the extraordinary fragmentation of natural history information about Florida ants.

Field Guide for the Identification of Invasive Plants in Southern Forests James H. Miller, Erwin B. Chambliss, Nancy J. Loewenstein, 2010 Invasions of non-native plants into forests of the Southern United States continue to go unchecked and only partially un-monitored. These infestations increasingly erode forest productivity, hindering forest use and management activities, and degrading diversity and wildlife habitat. Often called non-native, exotic, non-indigenous, alien, or noxious weeds, they occur as trees, shrubs, vines, grasses, ferns, and forbs. This guide provides information on accurate identification of the 56 non-native plants and groups that are currently invading the forests of the 13 Southern States. In addition, it lists other non-native plants of growing concern. Illustrations. This is a print on demand edition of an important, hard-to-find publication.

*The Psychology of Eyewitness Identification* James Michael Lampinen, Jeffrey S. Neuschatz, Andrew D. Cling, 2012-04-27 This volume provides a tutorial review and evaluation of scientific research on the accuracy and reliability of eyewitness identification. The book starts with the perspective that there are a variety of conceptual and empirical problems with eyewitness identification as a form of forensic evidence, just as there are a variety of problems with other forms of forensic evidence. There is then an examination of the important results in the study of eyewitness memory and the implications of this research for

psychological theory and for social and legal policy. The volume takes the perspective that research on eyewitness identification can be seen as the paradigmatic example of how psychological science can be successfully applied to real-world problems.

**Blind Identification of Structured Dynamic Systems** Chengpu Yu,Lihua Xie,Michel Verhaegen,Jie Chen,2021-11-22 This book is intended for researchers active in the field of (blind) system identification and aims to provide new identification ideas/insights for dealing with challenging system identification problems. It presents a comprehensive overview of the state-of-the-art in the area, which would save a lot of time and avoid collecting the scattered information from research papers, reports and unpublished work. Besides, it is a self-contained book by including essential algebraic, system and optimization theories, which can help graduate students enter the amazing blind system identification world with less effort.

**Color Atlas of Forensic Toolmark Identification** Nicholas Petraco,2010-09-21 In the wake of the Daubert ruling, the use of forensic toolmark evidence in court has been problematic, in that the conclusions of forensic scientists as to toolmark origin often lack scientifically sound statistical proof. In the Color Atlas of Forensic Toolmark Identification, noted forensic expert Nicholas Petraco helps move toolmark examination
