Essentials of Econophysics Modelling Frantisek Slanina,2013-12 This book is a course in methods and models rooted in physics and used in modelling economic and social phenomena. It covers the discipline of econophysics, which creates an interface between physics and economics. Besides the main theme, it touches on the theory of complex networks and simulations of social phenomena in general. After a brief historical introduction, the book starts with a list of basic empirical data and proceeds to thorough investigation of mathematical and computer models. Many of the models are based on hypotheses of the behaviour of simplified agents. These comprise strategic thinking, imitation, herding, and the gem of econophysics, the so-called minority game. At the same time, many other models view the economic processes as interactions of inanimate particles. Here, the methods of physics are especially useful. Examples of systems modelled in such a way include books of stock-market orders, and redistribution of wealth among individuals. Network effects are investigated in the interaction of economic agents. The book also describes how to model phenomena like cooperation and emergence of consensus. The book will be of benefit to graduate students and researchers in both Physics and Economics.

Friendshipping Jenn Bane,Trin Garritano,2020-12-22 With eight billion people in the world, why is it so hard to meet and make new friends? Navigating the world of adult friendships can be a real challenge when everyone is busy, overwhelmed, or too often too far away. Here to help are Jenn Bane and Trin Garritano, the duo behind the cult favorite podcast Friendshipping. Insightful, empathetic, and just a touch irreverent, Jenn and Trin give readers the tools they need to make new friends and revitalize the quality of existing friendships. The book covers it all: Meeting new people Mastering the art of small talk Deciphering the levels of friendship in the workplace Making the first friend move, plus how to give a non-creepy compliment You'll also learn why it's important to use the same IRL etiquette when making friends online; how to decide if a friendship is toxic and know when it's time to move on; and most important, how to be a better friend, to yourself and others.

Motor Skill Acquisition of the Mentally Handicapped M.G. Wade,1986-07-01

Based upon a conference held in Bethesda in 1985, this volume brings together the research and theoretical perspectives of experts in the developmental aspects of motor control, coordination, and skill in the mentally handicapped. This is accomplished within the context of cognition. Section I deals with the dynamics of controlling movement skill and the nature of the variables that mediate the learning of motor skills. Sections II and III examine the traditional area of research in motor behavior, i.e., the speed of information processing and reaction time paradigms. The last section discusses the issue of training to minimize the effects of mental retardation on motor behavior.
