Intelligent Notification Systems Abhinav Mehrotra,Mirco Musolesi,2020-01-03 Notifications provide a unique mechanism for increasing the effectiveness of real-time information delivery systems. However, notifications that demand users' attention at inopportune moments are more likely to have adverse effects and might become a cause of potential disruption rather than proving beneficial to users. In order to address these challenges a variety of intelligent notification mechanisms based on monitoring and learning users' behavior have been proposed. The goal of such mechanisms is maximizing users' receptivity to the delivered information by automatically inferring the right time and the right context for sending a certain type of information. This book presents an overview of the current state of the art in the area of intelligent notification mechanisms that rely on the awareness of users' context and preferences. We first present a survey of studies focusing on understanding and modeling users' interruptibility and receptivity to notifications from desktops and mobile devices. Then, we discuss the existing challenges and opportunities in developing mechanisms for intelligent notification systems in a variety of application scenarios.

User Acceptance of Mobile Notifications Tilo Westermann,2017-03-14 This book presents an alternative approach to studying smartphone-app user notifications. It starts with insights into user acceptance of mobile notifications in order to provide tools to support users in managing these. It extends previous research by investigating factors that influence users' perception of notifications and proposes tools addressing the shortcomings of current systems. It presents a technical framework and testbed as an approach for evaluating the usage of mobile applications and notifications, and then discusses a series of studies based on this framework that investigate factors influencing users' perceptions of mobile notifications. Lastly, a set of design guidelines for the usage of mobile notifications is derived that can be employed to support users in handling notifications on smartphones.

Technical guidance for the implementation of e-notification systems for food control ?Food and Agriculture Organization of the United Nations,2022-08-06 Over a third of global agrifood exports cross borders at least twice before reaching the final consumer. The complexity of food supply chains and the growing importance of the global agrifood trade thus creates new and ever greater challenges for the management of food safety. Geographically dispersed foods that have been produced, processed and distributed by multiple actors can pose heightened food safety risks. Tracing the origins of unsafe food is also more complex and time-consuming. For this reason, many nations have implemented more rigorous systems of food control for agrifood imports, while many others need assistance to develop them. To this end, FAO developed this guidance as part of a project entitled 'Digital solutions in support of improved official food control services'. The aim is to provide guidance for the design and implementation of a food control e-notification system, one tailored to national needs and resources. This guidance includes the system's legal basis, its structure and operational parameters, as well as its infrastructure and human resource requirements.

Worldwide Merger Notification Requirements George L. Paul,J. Mark Gidley,2008-01-01 Although international mergers continue to become more common, merger control regimes are wildly diverse, and there is no procedurally harmonized international system of merger notification. Instead, any one of the plethora of inconsistent regulations can hold up your transaction. The current edition of Worldwide Merger Notification Requirements evaluates the merger notification requirements of over 215 jurisdictions. In this book, the leading authorities at White & Case provide a complete road map for parties contemplating a multinational transaction by highlighting the disparate ways in which competition authorities treat mergers, including differences in notification timing; filing fees; turnover, size, and post-merger market share thresholds; potential penalties; volume and type of required filing information; and the multitude of standards and definitions that pervade every multinational transaction. This is an easy way for you to avoid time-consuming and costly bureaucratic obstacles! Wherever you may be advising on a merger, Worldwide Merger Notification Requirements will let you immediately determine: Where do I have to seek regulatory approval? When am I required to request approval: pre-merger, post-merger or is notification voluntary? Which countries do not require regulatory approval? How long does the approval process take? What key substantive issues will the agency examine? How much will it cost? And more!
