Excitons and Cooper Pairs Monique Combescot, Shiue-Yuan Shiau, 2016 This work connects the two famous fields of condensed matter physics, semiconductors and superconductors, through the composite boson nature of their key particles, excitons and Cooper pairs. The goal is to understand through these key particles how composite bosons made of two fermions interact.

Photoproduced and Electroproduced Muon Pairs Paul L. Rothwell, 1967 Part I: Photoproduced muon pairs were measured between 470 MeV and 1070 MeV in invariant mass. The results, after suitable corrections, were compared with the predictions of Quantum Electrodynamics. A value of $(0.74 \pm 0.20) \times 10^{-4}$ was obtained for the rho branching ratio into muon pairs compared with pion pairs. Upper limits of 0.26 and 0.12 were obtained for the omega and phi decay into muon pairs compared to the rho. Part II: The differential cross section for electroproduced (elastic) muon pairs were calculated including the crossterms between the space-like and time-like diagrams. The cross sections were evaluated for regions where either the space-like or time-like terms dominate. The muon-produced electron pair cross sections were also considered. Integration was performed over the final electron for muon pairs and the final muon for electron pairs. A region is shown to exist, consistent with Yamamoto's work, where the time-like case dominates. Counting rates are given for the apparatus of Part I for a carbon target and including form factor effects. Finally, zero mass, small angle approximations are derived for the differential cross sections for equal pair energies. (Author).

Frustrated Lewis Pairs J. Chris Slootweg, Andrew R. Jupp, 2020-11-22 This volume highlights the latest research in frustrated Lewis pair (FLP) chemistry and its applications. The contributions present the recent developments of the use of FLPs in asymmetric catalysis, polymer synthesis, homogeneous and heterogeneous catalysis, as well as demonstrating their use as a pedagogical tool. The book will be of interest to researchers in academia and industry alike.

Cause Effect Pairs in Machine Learning Isabelle Guyon, Alexander Statnikov, Berna Bakir Batu, 2019-10-22 This book presents ground-breaking advances in the domain of causal structure learning. The problem of distinguishing cause from effect ("Does altitude cause a change in atmospheric pressure, or vice versa?") is here cast as a binary classification problem, to be tackled by machine learning algorithms. Based on the results of the ChLearn Cause-Effect Pairs Challenge, this book reveals that the joint distribution of two variables can be scrutinized by machine learning algorithms to reveal the possible existence of a "causal mechanism", in the sense that the values of one variable may have been generated from the values of the other. This book provides both tutorial material on the state-of-the-art on cause-effect pairs and exposes the reader to more advanced material, with a collection of selected papers. Supplemental material includes videos, slides, and code which can be found on the workshop website. Discovering causal relationships from observational data will become increasingly important in data science with the increasing amount of available data, as a means of detecting potential triggers in epidemiology, social sciences, economy, biology, medicine, and other sciences.

A Comparison Process for Mouse Pairs John R. Steel, 2022-11-24 This book proves some important new theorems in the theory of canonical inner models for large cardinal hypotheses, a topic of central importance in modern set theory. In particular, the author 'completes' the theory of Fine Structure and Iteration Trees (FSIT) by proving a comparison theorem for mouse pairs parallel to the FSIT comparison theorem for pure extender mice, and then using the underlying comparison process to develop a fine structure theory for strategy mice. Great effort has been taken to make the book accessible to non-experts so that it may also serve as an introduction to the higher reaches of inner model theory. It contains a good deal of background material, some of it unpublished folklore, and includes many references to the literature to guide further reading. An introductory essay serves to place the new results in their broader context. This is a landmark work in inner model theory that should be in every set theorist's library.

Spin Dynamics in Radical Pairs Alan Lewis, 2018-09-12 This book sheds new light on the dynamical behaviour of electron spins in molecules containing two unpaired electrons (i.e. a radical pair). The quantum dynamics of these spins are made complicated by the interaction between the electrons and the many nuclear spins of the molecule; they are intractable using analytical techniques, and a naïve numerical diagonalization is not remotely possible using current computational resources. Hence, this book presents a new method for obtaining the exact quantum-mechanical dynamics of radical pairs with a modest number of nuclear spins. Readers will learn how a calculation that would take 13 years using conventional wavepacket propagation can now be done in 1 day, and will also discover a new semiclassical method for approximating the dynamics in the presence of many nuclear spins. The new methods covered in this book are shown to provide significant insights into three topical and diverse areas: charge recombination in molecular wires (which can be used in artificially mimicking photosynthesis), magnetoelectroluminescence in organic light-emitting diodes, and avian magnetoreception (how birds sense the Earth's magnetic field in order to navigate).

Guided Math Stretch: What Comes in Pairs? Lanne Sammons, 2014-06-01 Engage your mathematics students at the beginning of class with this whole-class warm-up activity. So You Wanna Be an Au Pair in the USA Cynthia Jele, 2006 Each year thousands of young men and women from all over the world visit the United States of America as au pairs. They do so expecting a fun-filled adventure, with opportunities to travel, improve their English, and make new friends. Many are surprised to find the promised adventure is not always pleasant. This book offers prospective au pairs a comprehensive idea of what au pairing in America truly entails, that is, the good, the bad, and the ugly. True au pair experiences are used throughout the book to illustrate possible dilemmas one may face and how best to deal with them.

Categories of Highest Weight Modules: Applications to Classical Hermitian Symmetric Pairs Thomas J. Enright, Brad Shelton, 1987 The category of highest weight representations is of special interest within the full set of

representations of a real semisimple Lie group. This memoir describes the structure of the generalized Verma modules as well as the Kazhdan-Lusztig data for the simple modules in this category for the classical groups. In particular, explicit formulas for composition factors of generalized Verma modules and Kazhdan-Lusztig polynomials are given.

Pair Correlations in Many-Fermion Systems Vladimir Z. Kresin,2013-06-29 At first glance, the articles in this book may appear to have nothing in common. They cover such seemingly disparate subjects as the properties of small metallic clusters and the behavior of superfluid He3, nuclear physics and organic materials, copper oxides and magnetic resonance. Why have they been brought together, particularly in our time of narrow specialization? In fact, the properties and effects described in this book touch upon one and the same fundamental phenomenon: pair correlation. Introduced in the theory of superconductivity by J. Bardeen, L. Cooper, and J. Schrieffer (BCS), this effect plays a key role in various Fermi systems. The book consists of several sections. The first chapter is concerned with conventional and high Tc superconductors. The second chapter describes two relatively young families of superconductors: organics and fullerenes. Chapter III addresses the superfluidity of 3 He • The discovery of this phenomenon in 1971 was a big event in physics and last year was acknowledged by a Nobel prize. This book contains the text of the Nobel lecture. Chapters IV and V are devoted to correlations in finite Fermi systems such as small metallic clusters, C 60 anions, and atomic nuclei. The book thus covers a broad range of problems, illuminating the close ties between various areas of physics.

Airs for Pairs Matt Seattle,2006-12-01 This book contains twenty-one of the most popular traditional melodies, both dance tunes and song airs, from around Britain and Ireland. Each tune is arranged with a harmony part for a second melody instrument as well as an optional chord accompaniment for guitar, piano etc.. In all cases but one (College Hornpipe) the harmony does not descend below middle C, so that the arrangements can be played by almost all melody instruments including recorders. The tunes are a part of a body of popular music which has survived to the present day alongside many other types of music. Generally called Folk or (preferably) Traditional music, it forms a tradition distinct from that of Art or Classical music, though it is no less artful in its own way and on its own scale. So, although musicians with a classical training are welcome to play and enjoy these arrangements, it should be borne in mind that there are many ways of interpreting the written notes: ornamentation which is not written down is frequently used to embellish the music and in the case of the dance tunes a robust approach to rhythm is called for (for fiddlers, digging in with the bow on the main beats). For those who need extra guidance there are now many excellent tutors available for most instruments and styles.
