Lawless, 2004-11-04 Presents an introduction to the French language, and provides French translations and pronunciation guides for English words and phrases related to meeting people, getting around town, dining, shopping, conducting business, seeking medical attention, and other topics.

The Noun Phrase in English Alex Ho-Cheong Leung, Wim van der Wurff, 2018-06-18 Building on a substantial earlier literature, the chapters in this volume further advance knowledge and understanding of properties of the noun phrase in English. The empirical material for the papers includes both historical and present-day data, with the two often shedding light on each other in a process of mutual illumination. The topics addressed are: the structure of nounless NPs like *the poor* and *the obvious*; the article/zero alternation in expressions like *go to (the) church*;

developments in the early history of adjective stacking; the semantics of N + clause units in present-day English; the history of N + BE + clause constructions; and the decline of two anaphoric NPs in Early Modern English. The volume will appeal to scholars working in this area and will also help those interested in the general field of English grammar to keep abreast of recent methods and results in NP-related work.

**Syntactic Phrase Structure Phenomena in Noun Phrases and Sentences** Christa Bhatt, Elisabeth Löbel, Claudia Schmidt, 1989 The main topic of this volume is the phrase structural analysis of noun phrases and sentences. This analysis is based on recent ideas within the Government and Binding framework and makes crucial use of such modules as Theta assignment, Binding Theory, Case assignment, as well as different definitions of the notion Barrier. The ten papers deal with certain aspects of English and German noun phrases.

**Phrase Structure in Natural Language** M.J. Speas, 2012-12-06

## **Head-Driven Phrase Structure Grammar Carl Pollard,Ivan A.**

Sag,1994-08-15 This book presents the most complete exposition of the theory of head-driven phrase structure grammar (HPSG), introduced in the authors' Information-Based Syntax and Semantics. HPSG provides an integration of key ideas from the various disciplines of cognitive science, drawing on results from diverse approaches to syntactic theory, situation semantics, data type theory, and knowledge representation. The result is a conception of grammar as a set of declarative and order-independent constraints, a conception well suited to modelling human language processing. This self-contained volume demonstrates the applicability of the HPSG approach to a wide range of empirical problems, including a number which have occupied center-stage within syntactic theory for well over twenty years: the control of understood subjects, long-distance dependencies conventionally treated in terms of wh-movement, and syntactic constraints on the relationship between various kinds of pronouns and their antecedents. The authors make clear how their approach compares with and improves upon approaches undertaken in other frameworks, including in particular the government-binding theory of Noam Chomsky.

## Phrase Mining from Massive Text and Its Applications Jialu

Liu, Jingbo Shang, Jiawei Han, 2022-06-01 A lot of digital ink has been spilled on big data over the past few years. Most of this surge owes its origin to the various types of unstructured data in the wild, among which the proliferation of text-heavy data is particularly overwhelming, attributed to the daily use of web documents, business reviews, news, social posts, etc., by so many people worldwide. A core challenge presents itself: How can one efficiently and effectively turn massive, unstructured text into structured representation so as to further lay the foundation for many other downstream text mining applications? In this book, we investigated one promising paradigm for representing unstructured text, that is, through automatically identifying high-quality phrases from innumerable documents. In contrast to a list of frequent n-grams without proper filtering, users are often more interested in results based on variable-length phrases with certain semantics such as scientific concepts, organizations, slogans, and so on. We propose new principles and powerful methodologies to achieve this goal, from the scenario where a user can provide meaningful guidance to a fully automated setting through distant learning. This book also introduces applications enabled by the mined phrases

and points out some promising research directions.
