*Capital Moves* Jefferson Cowie,2019-01-24 Find a pool of cheap, pliable workers and give them jobs—and soon they cease to be as cheap or as pliable. What is an employer to do then? Why, find another poor community desperate for work. This route—one taken time and again by major American manufacturers—is vividly chronicled in this fascinating account of RCA's half century-long search for desirable sources of labor. *Capital Moves* introduces us to the people most affected by the migration of industry and, most importantly, recounts how they came to fight against the idea that they were simply cheap labor. Jefferson Cowie tells the dramatic story of four communities, each irrevocably transformed by the opening of an industrial plant. From the manufacturer's first factory in Camden, New Jersey, where it employed large numbers of southern and eastern European immigrants, RCA moved to rural Indiana in 1940, hiring Americans of Scotch-Irish descent for its plant in Bloomington. Then, in the volatile 1960s, the company relocated to Memphis where African Americans made up the core of the labor pool. Finally, the company landed in northern Mexico in the 1970s—a region rapidly becoming one of the most industrialized on the continent.

**Rolling Circle Amplification (RCA)** Vadim V. Demidov,2016-11-09 This book covers the latest developments in rolling circle amplification (RCA) technology with applications in

clinical diagnostic tests and molecular medicine. Topics covered include new enzymes useful in RCA, techniques involving RCA for enhanced signal amplification, novel RCA diagnostics, sensors for expediting RCA detection, and prospective RCA-based therapeutics. This is a valuable book for university professors and students in the field of biomedical engineering and biomolecular pharmacology as well as R&D managers of biotechnology and biopharmaceutical companies. Specifically, this book: Reviews prospective RCA-based therapeutics, including RCA-derived DNA nanoparticles that strongly bind to cancer cells Expands readers' understanding of sensor systems for expediting detection of RCA products by using probe-tagged magnetic nanobeads Maximizes reader insights into novel RCA diagnostics, such as PNA openers-assisted RCA for detection of single target cells and in situ RCA diagnosis of cancer cells and malignant tissues Presents innovative methods for quasi-exponential enhancement of RCA-generated signals, such as nicking enzyme-assisted cascade RCA and RCA coupled with loop-mediated amplification Advance Praise for Rolling Circle Amplification (RCA): "This book provides a badly needed compendium of innovative RCA methods and applications. It should help further increase the community of scientists that have employed RCA in research and diagnostic programs."— Charles Cantor, Professor Emeritus of Biomedical Engineering, Boston University Executive Director, Retrotope Inc. (USA) "In this new book Vadim Demidov has assembled an enticing menu of articles that illustrate the evolution of the RCA field, including improved protein parts for building superior DNA nanomachines, enhanced modalities of amplification and detection, diagnostic applications, and even a sampling of potential therapeutic applications. The reader will appreciate that while RCA has come of age, there is no lack of exciting surprises, turns, and twists in the continuing evolution of the technology."— Paul Lizardi, Professor of Pathology, Yale University School of Medicine (retired) Investigator, University of Granada, Spain,

President, PetaOmics, Inc., San Marcos, Texas.

**David Sarnoff Research Center** Alexander B. Magoun, 2003 Color television, transistors, lasers, digital memory, computers, liquid-crystal displays, medical electronics, and digital video-these technologies define modern civilization. David Sarnoff Research Center: RCA Labs to Sarnoff Corporation tells the story of their invention or innovation at this Princeton, New Jersey research facility. The center's engineers, physicists, chemists, technicians, and shop workers developed radar, sonar, and TV-guided missiles during World War II. In 1951, RCA renamed the labs for its visionary leader, David Sarnoff, and the center continued its groundbreaking work for RCA's product divisions and patent-licensing department. General Electric bought RCA in 1986 and donated the David Sarnoff Research Center to SRI International, a nonprofit research institute. Ten years later, the center became Sarnoff Corporation, a company that provides innovative client solutions, licenses patents, starts companies, and sells products. David Sarnoff Research Center: RCA Labs to Sarnoff Corporation celebrates the fascinating process of research and development with stunning photographs selected from thirty thousand stills in RCA's collections now held at the David Sarnoff Library. Masterfully framed and lighted, these rare images reflect

American confidence in the promise of technology at its twentieth-century peak and illustrate a sometimes unusual world within a social life of awards, gardens, picnics, and sports teams.

**The TVs of Tomorrow** Benjamin Gross, 2018-03-22 In 1968 a team of scientists and engineers from RCA announced the creation of a new form of electronic display that relied upon an obscure set of materials known as liquid crystals. At a time when televisions utilized bulky cathode ray tubes to produce an image, these researchers demonstrated how liquid crystals could electronically control the passage of light. One day, they predicted, liquid crystal displays would find a home in clocks, calculators—and maybe even a television that could hang on the wall. Half a century later, RCA's dreams have become a reality, and liquid crystals are the basis of a multibillion-dollar global industry. Yet the company responsible for producing the first LCDs was unable to capitalize upon its invention. In *The TVs of Tomorrow*, Benjamin Gross explains this contradiction by examining the history of flat-panel display research at RCA from the perspective of the chemists, physicists, electrical engineers, and technicians at the company's central laboratory in Princeton, New Jersey. Drawing upon laboratory notebooks, internal reports, and interviews with key participants, Gross reconstructs the development of the LCD and situates it alongside other efforts to create a thin, lightweight replacement for the television picture tube. He shows how RCA researchers mobilized their technical expertise to secure support for their projects. He also highlights the challenges associated with the commercialization of liquid crystals at RCA and Optel—the RCA spin-off that ultimately manufactured the first LCD wristwatch. *The TVs of Tomorrow* is a detailed portrait of American innovation during the Cold War,

which confirms that success in the electronics industry hinges upon input from both the laboratory and the boardroom.
