Robo World: Jordan D. Brown,2006-04-30 Cynthia Breazeal is a creature creator. Armed with electronic gadgets, software programs, and her endless imagination, she creates lifelike machines that can respond to the world around them. Cynthia Breazeal is a roboticist, a scientist who designs, builds, and experiments with robots. As a child, she relied on movies to see robots in action. Robo Sapiens: Tales of Tomorrow (Omnibus) Toranosuke Shimada,2021-12-07 In this Eisner-nominated science fiction saga, enter a world where artificial intelligence is thriving--and human culture is dying. In the future, robots are more than machines. Autonomous cyber-persons with A.I. brains are now part of society, interacting with humans while developing their own culture. In fact, they may be surpassing humans, as biological homo sapiens have begun to die out and give way to robo sapiens. But are humans truly disappearing, or are robots becoming the newest form of humanity? This millennia-spanning, speculative fiction manga of interconnected stories, both human and robotic, was awarded the Division Grand Prize at the 2020 Japan Media Arts Festival and was nominated for a 2022 Eisner Award.

Robo Sapiens Japanicus Jennifer Robertson,2018 Japan is arguably the first postindustrial society to embrace the prospect of human-robot coexistence. Over the past decade, Japanese humanoid robots designed for use in homes, hospitals, offices, and schools have become celebrated in mass and social media throughout the world. In Robo sapiens japanicus, Jennifer Robertson

casts a critical eye on press releases and public relations videos that misrepresent robots as being as versatile and agile as their science fiction counterparts. An ethnography and sociocultural history of governmental and academic discourse of human-robot relations in Japan, this book explores how actual robots—humanoids, androids, and animaloids—are “imagineered” in ways that reinforce the conventional sex/gender system and political-economic status quo. In addition, Robertson interrogates the notion of human exceptionalism as she considers whether “civil rights” should be granted to robots. Similarly, she juxtaposes how robots and robotic exoskeletons reinforce a conception of the “normal” body with a deconstruction of the much-invoked Theory of the Uncanny Valley.

Robo-Advisory Peter Scholz, 2020-12-28 Robo-Advisory is a field that has gained momentum over recent years, propelled by the increasing digitalization and automation of global financial markets. More and more money has been flowing into automated advisory, raising essential questions regarding the foundations, mechanics, and performance of such solutions. However, a comprehensive summary taking stock of this new solution at the intersection of finance and technology with consideration for both aspects of theory and implementation has so far been wanting. This book offers such a summary, providing unique insights into the state of Robo-Advisory. Drawing on a pool of expert authors from within the field, this edited collection aims at being the vital go-to resource for academics, students, policy-makers, and practitioners alike wishing to engage with the topic. Split into four parts, the book begins with a survey of academic literature and its key insights paired with an analysis of market developments in Robo-Advisory thus far. The

second part tackles specific questions of implementation, which are complemented by practical case studies in Part III. Finally, the fourth part looks ahead to the future, addressing questions of key importance such as artificial intelligence, big data, and social networks. Thereby, this timely book conveys both a comprehensive grasp of the status-quo as well as a guiding outlook onto future trends and developments within the field.

Hobo Robo Paul Simone, 2021-02-04 This is the introductory book that takes you into the marvelous world of Hobo Robo and all his robot companions. After the Earth humans come to the very distant planet of New Georgia, they establish an elaborate infrastructure to produce food and goods for the many remote colonized worlds so very far from Earth. They come with their untold numbers of robot helpers, and then, eventually, leave them behind to go conquer another uninhabited planet. Their robots are now responsible to the Earth colonists to maintain the food producing machine now fully functional. One HR robot and one PG robot are reprogrammed to supervise and oversee the entire operations and report their activities to the distant humans. These reprogrammed robots are jokingly called nick-names by the humans who leave them in charge; Hobo Robo and Pygme robot. New Georgia has the unique privilege of being blessed with the very first remote Galactic Robotics facility ever established off Earth. This addition brings with it untold new benefits and problems as the gigantic Earth company invests heavily in their new remote manufacturing and development endeavor. Far from the restrictions of Earth, Galactic Robotics can pursue their more nefarious and deadly creations, such as military grade robots, advanced weapons, and destructive space craft. Back on Earth they had to fear the watchful eyes of the Galactic

Federation Of Words, but not so here on remote New Georgia. Soon Hobo and Pygme are investigating the wanton destruction of Harvester Robots, and trying to find out who and why the colonists' robots are being ripped apart. This investigation slowly leads to a discovery of enormous import and consequences. A discovery that the colonists and Galactic Robotics are soon brought into , and the escalations are beyond anything imagined. The military might of Galactic Robotics is soon shown to be something that is not to be trifled with. Many more actors and alien races soon show up on New Georgia to add to the growing complexity of the tiny planet's dynamics. This first book lays the foundations and reader understandings of this ongoing story-line, which is currently continued in three additional novels. This author wants the readership to know that very soon Hobo Robo will have his own website, that will act as a hub for our robot heroes to meet the world and expand out to distant universes of robot adventure and fun.
