Student Language Scale (SIs) User's Manual Nickola Nelson, Barbara Howes (M.), Michele A. Anderson, 2017-11 For use on its own or with the Test of Integrated Language and Literacy Skills(TM) (TILLS™), the Student Language Scale reliably screens students from ages 6-18 years for language and literacy disorders, including dyslexia. Filled out by parents, teachers, and students in just three minutes or less, the 12-question screener is a quick, cost-effective way to see how students are performing on academic tasks as compared to their same-age peers. This concise User's Manual shows you how to effectively use the SLS to: Screen for language/literacy disorders by gathering teachers' and parents' ratings of students. When teachers or parents rate more than two areas on items 1-8 less than 5, SLS results indicate the student is at risk and needs further assessment Gather input about a struggling student's strengths and needs from multiple sources--a key requirement of IDEA Enhance home-school communication by gaining new insight into the student's performance and the teacher's, parents', and student's perspectives on it, whether or not everyone agrees and whether or not there are concerns You'll get reader-friendly guidance on how to administer the SLS with teachers, parents, and students; a complete guide to the technical data supporting the SLS; and three examples that show how the SLS can help you make sound decisions about followup for students who need it. Whether used with an entire classroom or with individual students, the SLS is the tool you need to quickly gather valuable information about strengths and needs--and plan next steps for students at risk for disorders. Ideal for use with TILLS Give the SLS to a whole class--and when results indicate the student is at risk, follow up with TILLS assessment. Strong sensitivity and specificity Sensitivity of the SLS to risk of language/literacy disorder is .90 for teachers and .85 for parents, and specificity (correct identification of typical learners) is .90 for teachers and .83 for parents. To learn more about the SLS, watch this free webinar, Quickly and Reliably Screen Students for Language/Literacy Disorders Including Dyslexia.

Sls-1 Flight Experiments Preliminary Significant Results National Aeronautics and Space Administration (NASA), 2018-07-11 Spacelab Life Sciences-1 (SLS-1) is the first of a series of dedicated life sciences Spacelab missions designed to investigate the mechanisms involved in the physiological adaptation to weightlessness and the subsequent readaptation to 1 gravity (1 G). Hypotheses generated from the physiological effects observed during earlier missions led to the formulation of several integrated experiments to determine the

underlying mechanisms responsible for the observed phenomena. The 18 experiments selected for flight on SLS-1 investigated the cardiovascular, cardiopulmonary, regulatory physiology, musculoskeletal, and neuroscience disciplines in both human and rodent subjects. The SLS-1 preliminary results gave insight to the mechanisms involved in the adaptation to the microgravity environment and readaptation when returning to Earth. The experimental results will be used to promote health and safety for future long duration space flights and, as in the past, will be applied to many biomedical problems encountered here on Earth. EMMA'S POEM GRINSPOON ED PA SP SLS Linda Glaser,2010-04-05 Give me your tired, your poor Your huddled masses yearning to breathe free . . . In 1883, Emma Lazarus, deeply moved by an influx of immigrants from eastern Europe, wrote a sonnet that gave a voice to the Statue of Liberty. Originally a gift from France to celebrate our shared national struggles for liberty, the statue, thanks to Emma's poem, came to define us as a nation that welcomes immigrants. The text of that now famous poem, The New Colossus, appears in this free-verse biography, illustrated in an exquisite folk art style. The New Colossus by Emma Lazarus has been selected as a Common Core Text Exemplar (Grades 4-5, Poetry)

Sts-40 Spacelab Life Sciences 1 (Sls-1) National Aeronautics and Space Adm Nasa,2018-11-02 Successful exploration of space depends on the health and well-being of people who travel and work there. For this reason, the National Aeronautics and Space

Administration (NASA) has dedicated several Space Shuttle missions to examine how living and working in space affects the human body. Spacelab Life Sciences 1 (SLS-1) is the first of these missions. The main purpose of the SLS-1 mission is to study the mechanisms, magnitudes, and time courses of certain physiological changes that occur during space flight and to investigate the consequences of the body's adaptation to microgravity and readjustment to gravity upon return to Earth. How does space flight influence the heart and circulatory system, metabolic processes, the muscles and bones, and the cells? If responses to weightlessness are undesirable, how can they be prevented or controlled? Will the human body maintain its physical and chemical equilibrium during months aboard a space station and years-long missions to Mars? When crews return to Earth, what can they expect to experience as their bodies readjust to Earth's gravity? With the SLS-1 experiments, NASA is addressing some of these questions. Various aspects of the SLS-1 are discussed. Unspecified Center...
