Cyber-risk and Youth Michael C Adorjan,Rosemary Ricciardelli,2019-01-02 Cyber-risks are moving targets and societal responses to combat cyber-victimization are often met by the distrust of young people. Drawing on original research, this book explores how young people define, perceive, and experience cyber-risks, how they respond to both the messages they are receiving from society regarding their safety online, and the various strategies and practices employed by society in regulating their online access and activities. This book complements existing quantitative examinations of cyberbullying assessing its extent and frequency, but also aims to critique and extend knowledge of how cyber-risks such as cyberbullying are perceived and responded to. Following a discussion of their methodology and their experiences of conducting research with teens, the authors discuss the social network services that teens are using and what they find appealing about them, and address teens' experiences with and views towards parental and school-based surveillance. The authors then turn directly to areas of concern expressed by their participants, such as relational aggression, cyberhacking, privacy, and privacy management, as well as sexting. The authors conclude by making recommendations for policy makers, educators and teens – not only by drawing from their own theoretical and sociological interpretations of their findings, but also from the responses and recommendations given by their participants about going online and tackling cyber-risk. One of the first texts to explore how young people respond to attempts to regulate online activity, this book will be key reading for those involved in research and study surrounding youth crime, cybercrime, youth culture, media and crime, and victimology – and will inform those interested in addressing youth safety online how to best approach what is often perceived as a sensitive and volatile social problem.

The Psychology of Social Media Ciarán Mc Mahon,2019-03-25 Are we really being ourselves on social media? Can we benefit from connecting with people we barely know online? Why do some people overshare on social networking sites? The Psychology of Social Media explores how so much of our everyday lives is played out online, and how this can impact our identity, wellbeing and relationships. It looks at how our online profiles, connections, status updates and sharing of photographs can be a way to express ourselves and form connections, but also highlights the pitfalls of social media including privacy issues. From FOMO to fraping, and from subtweeting to selfies, The Psychology of Social Media shows how social media has developed a whole new world of communication, and for better or worse is likely to continue to be an essential part of how we understand our selves.
