

Lithium-ion Batteries, 2019 This is the first machine-generated scientific book in chemistry published by Springer Nature. Serving as an innovative prototype defining the current status of the technology, it also provides an overview about the latest trends of lithium-ion batteries research. This book explores future ways of informing researchers and professionals. State-of-the-art computer algorithms were applied to: select relevant sources from Springer Nature publications, arrange these in a topical order, and provide succinct summaries of these articles. The result is a cross-corpora auto-summarization of current texts, organized by means of a similarity-based clustering routine in coherent chapters and sections. This book summarizes more than 150 research articles published from 2016 to 2018 and provides an informative and concise overview of recent research into anode and cathode materials as well as further aspects such as separators, polymer electrolytes, thermal behavior and modelling. With this prototype, Springer Nature has begun an innovative journey to explore the field of machine-generated content and to find answers to the manifold questions on this fascinating topic. Therefore it was intentionally decided not to manually polish or copy-edit any of the texts so as to highlight the current status and remaining boundaries of machine-generated content. Our goal is to initiate a broad discussion, together with the research community and domain experts, about the future opportunities, challenges and limitations of this technology.--Publisher's website.

Encyclopedia of Astrobiology Ricardo Amils,Muriel Gargaud,José Cernicharo Quintanilla,Henderson James Cleaves,William M. Irvine,Daniele Pinti,Michel Viso,2021-01-14 The interdisciplinary field of Astrobiology constitutes a joint arena where provocative discoveries are coalescing concerning, e.g. the prevalence of exoplanets, the diversity and hardness of life, and its increasingly likely chances for its emergence. Biologists, astrophysicists, biochemists, geoscientists and space scientists share this exciting mission of revealing the origin and commonality of life in the Universe. The members of the different disciplines are used to their own terminology and technical language. In the interdisciplinary environment many terms either have redundant meanings or are completely unfamiliar to members of other disciplines. The Encyclopedia of Astrobiology serves as the key to a common understanding. Each new or experienced researcher and graduate student in adjacent fields of astrobiology will appreciate this reference work in the quest to understand the big picture. The carefully selected group of active researchers contributing to this work and the expert field editors intend for their contributions, from an internationally comprehensive perspective, to accelerate the interdisciplinary advance of astrobiology.

An Introduction to Statistical Learning Gareth James,Daniela Witten,Trevor Hastie,Robert Tibshirani,Jonathan Taylor,2023-08-01 An Introduction to Statistical Learning provides an accessible overview of the field of statistical learning, an essential toolset for making sense of the vast and complex data sets that have emerged in fields ranging from biology to finance, marketing, and astrophysics in the past twenty years. This book presents some of the most important modeling and prediction techniques, along with relevant applications. Topics include linear regression, classification, resampling methods, shrinkage approaches, tree-based methods, support vector machines, clustering, deep learning, survival analysis, multiple testing, and more. Color graphics and real-world examples are used to illustrate the methods presented. This book is targeted at statisticians and non-statisticians alike, who wish to use cutting-edge statistical learning techniques to analyze their data. Four of the authors co-wrote *An Introduction to Statistical Learning, With Applications in R (ISLR)*, which has become a mainstay of undergraduate and graduate classrooms worldwide, as well as an important reference book for data scientists. One of the keys to its success was that each chapter contains a tutorial on implementing the analyses and methods presented in the R scientific computing environment. However, in recent years Python has become a popular language for data science, and there has been increasing demand for a Python-based alternative to ISLR. Hence, this book (ISLP) covers the same materials as ISLR but with labs implemented in Python. These labs will be useful both for Python novices, as well as experienced users.

Springer Mountain Wyatt Williams,2021-09-13 Drawing on years of investigative reporting, Wyatt Williams offers a powerful look at why we kill and eat animals. In order to understand why we eat meat, the restaurant critic and journalist investigated factory farms, learned to hunt game, worked on a slaughterhouse kill floor, and partook in Indigenous traditions of whale eating in Alaska. In *Springer Mountain*, he tells about his experiences while charting the history of meat eating and vegetarianism. Williams shows how mysteries springing up from everyday experiences can lead us into the big questions of life while examining the irreconcilable differences between humans and animals. *Springer Mountain* is a thought-provoking work, one that reveals how what we eat tells us who we are.

Tattooed Bodies James Martell,Erik Larsen,2022-01-20 The essays collected in *Tattooed Bodies* draw on a range of theoretical paradigms and empirical knowledge to investigate tattoos, tattooing, and our complex relations with marks on skin. Engaging with diverse disciplinary perspectives in art history, continental philosophy, media studies, psychoanalysis, critical theory, literary studies, biopolitics, and cultural anthropology, the volume reflects the sheer diversity of meanings attributed to tattoos throughout history and across cultures. Essays explore conceptualizations of tattoos and tattooing in Derrida, Deleuze and Guattari, Lacan, Agamben, and Jean-Luc Nancy, while utilizing theoretical perspectives to interpret tattoos in literary works by Melville, Beckett, Kafka, Genet, and Jeff VanderMeer, among others. *Tattooed Bodies* prompts readers to explore a few significant questions: Are tattoos unique phenomena or an art medium in need of special theoretical exploration? If so, what conceptual paradigms and theories might best shape our understanding of tattoos and their complex ubiquity in world cultures and histories?

Springer-Verlag: History of a Scientific Publishing House Heinz Sarkowski,2014-10-03 This book describes the fortunes and activities of one of the few specialist publishing houses still in the hands of the same family that established it over years ago, and with it gives a p- trayal of those members who directed it. In doing so it covers a period of momentous historical events that directly and in- rectly shaped the firm's actions and achievements. But this volume tells not only, in word and picture, the story of Springer- Verlag but also, interwoven with it, the story of scientific p- lishing in Germany over the span of a hundred years. The text, densely packed with carefully researched facts and figures, is illuminated and supplemented by many illustrations whose captions, together with the author's notes, contain a wealth of important and interesting information. The reader is urged to read these captions as well as the notes so as to - preciate in full the events and people described. I have added a few footnotes to clarify or expand on some matters that may be unfamiliar to non-German readers. Because of the long period of time covered in these pages many of

the documents and letters shown and commented upon are different in diction and style from those of today. An - tempt was made in the translation to keep the flavour of the original language and not contemporise it.

Springer's Gambit W. L. Ripley,2001-06-25 Aspen-- the American Riviera-- where the rich and the beautiful go to play. Quiet streets, breathtaking mountains, and one of the lowest crime rates in America. But that's about to change. Real estate speculator Max Shapiro has been cleaning the San Francisco mob's money for three decades. Then the hammer drops-- he's dying of cancer and is on borrowed time. Resentful of the mob's hold and not wishing to die with an IV hose in his arm, Max tells the mob he isn't paying any more tribute, hoping they'll send someone to kill him. While vacationing in Aspen, however, Max gets a call from his doctor. Good news. Max isn't dying after all. But it's too late to call off the mob's killers. Max's only hope is the enigmatic Cole Springer-- an ex-Secret Service agent with a penchant for creative thinking-- broke and in danger of losing his Aspen nightclub. Shapiro needs a bodyguard and Springer needs money, so they cut a protection deal. Enter Gerry Knucks Nugent, a cerebral and deadly hit man in the midst of a midlife crisis who has been sent to kill Shapiro. A mob boss dies in 'Frisco, there is a struggle for power, and an emergency cache of three million dollars ends up in the hands of Nicky Tortino, a merciless Bay Area crime lord. The shift in the underworld command sends shock waves rippling across the western United States, affecting even Shapiro and Nugent. Meanwhile, Springer's active mind runs to larger themes than merely protecting Shapiro, and he begins to formulate a scheme to save Shapiro and get his hands on the three million. Springer's scam depends upon recruiting Nugent, and Nugent is widely feared-- even by his ruthless bosses on the West Coast. Bay Area underboss Nicky Tortino travels to Aspen to get Shapiro to launder the three million, and also to have both Springer and Shapiro killed. The law closes in and Springer is running out of time and options. Beset on all sides, Springer designs an elaborate sting to extricate Shapiro and himself from the deadly web that has formed around them. But can he trust Nugent?
