Trapping and the Detection, Control, and Regulation of Tephritid Fruit Flies Todd Shelly,Nancy Epsky,Eric B. Jang,Jesus Reyes-Flores,Roger Vargas,2014-10-06 The book focuses on four broad topics related to trapping of agriculturally important tephritid fruit flies, namely i) lures and traps, ii) invasion biology and detection of infestations, iii) attract and kill systems, and iv) trade regulations and risk assessment. This comprehensive structure progresses from the biological interaction between insect and lures/traps to the area-wide use of trapping systems to the utilization and impact of trapping data on international trade. The chapters include accounts of earlier research but are not simply compendia and instead evaluate past and current work as a tool for critical analysis and proposal of productive avenues for future work. At present there is no book available that deals with fruit fly trapping in such a broad context. Our book fills this gap and serves as a global reference for both those interested in fruit flies specifically as well as anyone dealing with the threat of invasive agricultural insects in general.

Integrated Pest Management in tomato in Eritrea Food and Agriculture Organization of the United Nations,2019-12-06 This manual represents the attempt to summarize the experience on tomato production in Eritrea. It is aimed at providing guidance for the Facilitators in the planning and implementation of future IPM activities, with a view to establishing a national network implementing IPM approaches not only on tomato, but on a range of vegetables and other crops (e.g. citrus, cereals) prioritized in the different regions, in an effort to promote a judicious use of chemical pesticides through promotion of IPM. The manual is a technical reference that gives background information and refers to practical exercises / activities that can be useful in the field during the FFS, to help the trainees better understand the different topics.

Fundamentals of Applied Acarology Manjit Singh Dhooria,2016-12-14 Acarology - the study of mites and ticks, is a subdiscipline of Zoology, and is many

times considered in the field of Entomology (the study of insects). Mites and ticks are distributed throughout the world and inhabit almost every ecosystem (both terrestrial and aquatic) including grassland soils. More than 55,000 species of mites and ticks are already described. Mites and ticks directly affects humans as pests of different crops, fruit plants, vegetable crops and field crops; as parasites of human beings, veterinary animals, poultry and pets; pests of stored grains and other products; mushrooms and cheese; and as parasites of honeybees. Mite infestations are responsible for economic losses worth billions of dollars in terms of reduced crop yields and lowered quality of produce. Many species of mites serve as vectors of various plant diseases; some species of ticks cause losses through blood feeding and by transmitting many diseases among man and animals. House-dust mite allergies, and tick bite allergies are also common in many parts of the world. Present Book, *Fundamentals of Applied Acarology*, is written keeping in view non-availability of any standard text dealing in different aspects of acarology at one place. Separate chapters in this book are devoted to Importance of Acarology, Historical account, acarine technology, morphology and anatomy of Acari; Feeding, Development and Reproduction. Molecular developments in relation to mites and ticks are also discussed. Role of mites and ticks in Quarantines of plants and animals; forensic/criminal investigations; and importance of accidental acarophagy are discussed in detail. Safe usage of pesticides based on their mode of action (IRAC's Groups), development of acaricide resistance and measures to mitigate it are discussed. Mite pests of fruit trees, vegetable plants, and floricultural plants; field crops; mite problems in greenhouses/polyhouses; and mite problems encountered under organic cultivation of plants; and their management through minimum usage of pesticides are emphasized. Role of different predaceous mites in controlling plant pests like thrips, aphids and scale insects is elaborately discussed. Biological control of phytophagous mites is discussed in detail. Different animal parasitic mites and ticks are discussed from veterinary and medical point of view. At the end of each chapter, many important references for further reading; and Electronic References (ER) in the form of youtube links and other weblinks are given to understand fully how these tiny creatures look like; behave, feed and reproduce; nature of damage they cause to plants and animals; and measures to mitigate them. Weblinks will stimulate interest in the readers for more information about different mites and ticks. The knowledge contained in the book may prove as best material for General and Applied Acarology course for graduate and post-graduate levels, teachers and researchers in entomology, pest control advisors, professional entomologists, pesticide industry managers, policy planners, and others having interest in mites and ticks./div

Guidance for Packing, Shipping, Holding and Release of Sterile Flies in Area-wide Fruit Fly Control Programmes Walther Enkerlin,2007 There has been little harmonisation of the processes involved in the handling and release of sterile insects after production in mass rearing facilities. There are no standard guidelines available to transfer this technology to FAO or IAEA member countries that want to embark on sterile insect technique (SIT) activities. There is also increased interest by the private sector in investing in sterile insect production and/or other SIT activities, and these harmonized guidelines on the post-production phase will facilitate SIT application and foster the commercialization of the SIT.This guideline resulted from two FAO/IAEA consultants' meetings with representatives of relevant SIT programmes, the first held in Sarasota, Florida, United States of America (April 2004) and the second in Vienna, Austria (August 2005). It has identified a number of gaps in knowledge as well as procedures that are often based on conventional wisdom but which need scientific verification or optimization.

Techniques for Evaluating Insect Resistance in Crop Plants Charles M. Smith,Z. R. Khan,Mano Dutta Pathak,1993-12-17 This comprehensive book is the first illustrated volume to provide detailed discussions of all plant genera regarding techniques developed to evaluate plant resistance to insects. Many of the book's references have never before appeared in a volume on this subject. The authors systematically discuss techniques used to evaluate different types of insect behavior and plant morphological and phytochemical factors responsible for plant resistance and susceptibility to insects.

The Beekeeper's Handbook Diana Sammataro, Alphonse Avitabile, 1998 Since 1973, tens of thousands of first-time and experienced beekeepers alike have relied on The Beekeeper's Handbook as the best single-volume guide to the hobby and profession of beekeeping. Featuring clear descriptions and authoritative content, this handbook provides step-by-step directions accompanied by more than 100 illustrations for setting up an apiary, handling bees, and working throughout the season to maintain a healthy colony of bees and a generous supply of honey. This book explains the various colony care options and techniques, noting advantages and disadvantages, so that beekeepers can make the best choices for their own hives. This fourth edition has been thoroughly redesigned, expanded, updated, and revised to incorporate the latest information on Colony Collapse Disorder, green IPM methods, regional overwintering protocols, and procedures for handling bees and managing diseases and pests such as African honey bees and bee mites. The book explains not only how but also why each step is part of the transformative process that results in the magnificent creation of honey. This essential guide is a beekeeper's most valuable resource. Colony Collapse Disorder has renewed our recognition of the importance of small-scale beekeeping and the critical role of bees in the production of our food supply. For the growing number of beekeepers looking to set up hives for either a rewarding hobby or a profitable commercial enterprise, this updated and revised essential how-to guide includes: step-by-step directions for all stages from setting up an apiary to harvesting honey; approximately 100 illustrations featuring techniques, equipment, and bee biology; information about how to manage new pests and diseases including Colony Collapse Disorder; coverage of new trends and changes in beekeeping including green IPM techniques and new laws for urban beekeeping; the most up-to-date bibliography and list of resources on the topic; and a new user-friendly book design that clearly highlights instructions and other important features.

Good beekeeping practices: Practical manual on how to identify and control the main diseases of the honeybee (Apis mellifera) Food and Agriculture Organization of the United Nations, 2020-05-01 This is a practical tool to help beekeepers, veterinarians and beekeeping advisory services to properly identify main honeybee diseases and to take the most appropriate actions in the apiary to control and/or prevent disease outbreaks. This publication follows the TECA publication *Main bee diseases: good beekeeping practices* (2018) which provided a more general overview of good beekeeping practices for bee diseases. This manual is a unique publication because, through its presentation of practical information, simple visuals, and understandable content, it helps beekeepers to correctly identify main honeybee diseases in a timely manner. More specifically, the manual creatively illustrates actions which facilitate the identification of disease symptoms. It also presents a comprehensive list of good beekeeping practices to adopt in the apiary as well as biosafety measures to reduce the risk of the introduction and the spread of main honeybee diseases. The manual's overall objective is ultimately to support a more sustainable beekeeping sector.
