Travel by Design Marlon Gary Boarnet, Randall Crane, 2001 In *Travel by Design*, Boarnet and Crane demonstrate that the influence of the built environment on travel is more complex and misleading than often portrayed, a relationship that reveals predictable patterns and useful policy advice. The authors evaluate design reforms within the range of congestion management and air quality improvement policies, providing both policy advice and the first methodical assessment of the governmental and regulatory challenge of building fewer auto-dependent communities. Overall, the work gives a better understanding of how urban design influences travel behavior, while analyzing the potential for land use planning to address transportation problems.--Jacket.

**Human Transit** Jarrett Walker, 2012-07-29 Public transit is a powerful tool for addressing a huge range of urban problems, including traffic congestion and economic development as well as climate

change. But while many people support transit in the abstract, it's often hard to channel that support into good transit investments. Part of the problem is that transit debates attract many kinds of experts, who often talk past each other. Ordinary people listen to a little of this and decide that transit is impossible to figure out. Jarrett Walker believes that transit can be simple, if we focus first on the underlying geometry that all transit technologies share. In *Human Transit*, Walker supplies the basic tools, the critical questions, and the means to make smarter decisions about designing and implementing transit services. *Human Transit* explains the fundamental geometry of transit that shapes successful systems; the process for fitting technology to a particular community; and the local choices that lead to transit-friendly development. Whether you are in the field or simply a concerned citizen, here is an accessible guide to achieving successful public transit that will enrich any community.

**The Routes Not Taken** Joseph B. Raskin, 2013-12-01 A fascinating journey into the past—and under the ground—that offers “an insightful look at the what-might-have-beens of urban mass transit” (The New York Times). From the day it broke ground by City Hall in 1900, it took about four and half years to build New York’s first subway line to West 145th Street in Harlem. Things rarely went that quickly ever again. *The Routes Not Taken* explores the often-dramatic stories behind unbuilt or unfinished subway lines. The city’s efforts to expand its underground labyrinth were often met with

unexpected obstacles—financial shortfalls, clashing political agendas, battles with community groups, and more. After discovering a copy of the 1929 subway expansion map, Joseph B. Raskin began his own investigation into the city's underbelly. Here he provides an extensively researched history of the Big Apple's unfinished business. The Routes Not Taken sheds light on: \*the efforts to expand the Hudson Tubes into a full-fledged subway \*the Flushing line, and why it never made it past Flushing \*a platform under Brooklyn's Nevins Street station unused for more than a century \*the 2nd Avenue line—long the symbol of dashed dreams—deferred countless times since the original plans were presented in 1929 Raskin reveals the personalities involved, explaining why Fiorello H. La Guardia couldn't grasp the importance of subway lines and why Robert Moses found them old and boring. By focusing on unbuilt lines, he illustrates how the existing system is actually a Herculean feat of countless compromises. Filled with illustrations, this is an enduring contribution to the history of transportation and the history of New York City.

Life in Transit Sam Berkson, 2012-06-06 Life in Transit is a debut poetry collection from Sam Berkson that explores the experience of public transport in neoliberal Britain. Whether it's protesting the third runway at Heathrow, questioning Tannoy announcements in railway stations or celebrating the bicycle, Sam's keen eye exposes the smoke and mirrors of public life, whilst he celebrates the human journey and the indomitable spirit of the traveller.

**Factors, Trends, and Guidelines Related to Trip Length** Salvatore J. Bellomo, Robert B. Dial, Alan M. Voorhees, 1970 Knowledge of the characteristics of trip length is needed to determine future urban travel demands. Trip length changes are analyzed on small geographic parts of metropolitan areas, such as traffic districts. Hypotheses stating the relationship between trip length and influencing factors were formulated and tested. These tests were made through a correlation

analysis of changes in the mean trip length and changes in related factors in two medium-sized urban areas (Sioux City, Iowa and Reading, Pennsylvania) of about 100,000 population, one large metropolitan area of about 3,500,000 population (Detroit), and a simulation study of the work trip for a city of about 2,500,000 people.

Integration of Paratransit and Fixed-route Transit Services Richard Weiner, Transit Cooperative Research Program, 2008 TRB's Transit Cooperative Research Program (TCRP) Synthesis 76: Integration of Paratransit and Fixed-Route Transit Services explores the experiences of transit agencies that have attempted to depart from the traditional binary model of separate fixed-route and paratransit services by seeking a variety of ways to integrate their services. Options examined in the report include the provision of paratransit feeder services, community bus or circulators, connectors, fixed-route fare incentives, and route deviation--Publisher's description

### **Policies and Practices for Effectively and Efficiently Meeting ADA Paratransit Demand**

David Chia, Transit Cooperative Research Program, 2008 TRB's Transit Cooperative Research Program

(TCRP) Synthesis 74: Policies and Practices for Effectively and Efficiently Meeting ADA Paratransit Demand highlights policies and practices that transit agencies may be able to apply to their own paratransit services, often without the need to devote significant funds, personnel, or other resources. The report also examines certain practices and technologies that are still under development or have not undergone extensive testing--Publisher's description.

*Interregional Travel* National Academies of Sciences, Engineering, and Medicine, Transportation Research Board, Policy Studies Committee for a Study of Intercity Passenger Travel Issues and Opportunities in Short-Haul Markets, 2016-04-07 TRB Special Report 320: *Interregional Travel: A New Perspective for Policy Making* examines the demand for and supply of interregional transportation in the United States. Major additions to transportation infrastructure, including high-speed rail, are being considered for some of the country's most heavily traveled 100- to 500-mile corridors. The availability and use of the automobile, airplane, and train for interregional travel are reviewed along with the rejuvenated intercity bus. U.S. interregional corridors and transportation options are contrasted with those in Japan and Europe, where substantial investments have been made in passenger rail. Public investments in new, long-lived transportation infrastructure can be risky because of uncertainty about future demand and the development of new technologies and competing transportation services. Decisionmakers in interregional corridors face the added challenge of having to coordinate investments across multiple jurisdictions. The report recommends actions to reduce this uncertainty and create stronger institutional means for developing the country's interregional corridors. TR News 303 features an article on *Interregional Travel: A New Perspective for Policy Making*. A video about the research is now available: At the 2016 TRB Annual Meeting, January 10-14, 2016, a session entitled *Interregional Travel: Policymaking from a New*

Perspective was webcast live. These videos provide an overview of various components of the project.

Guidebook for Attracting Paratransit Patrons to Fixed-route Services John N. Balog, National  
Research Council (U.S.). Transportation Research Board, 1997 Paratransit services are more expensive  
to provide on a per-trip basis than fixed-route transit, so operating efficiencies could be achieved by  
attracting some paratransit riders to fixed route. The Guidebook identifies the characteristics and  
preferences of four distinct market segments: people with disabilities who use fixed-route transit;  
people with disabilities who use paratransit; others who currently use paratransit; and people with  
disabilities who normally do not use transit. The Guidebook also provides step-by-step procedures for  
estimating demand, locating bus stops, training drivers, providing travel training for patrons,  
marketing services, and evaluating successes.
