**The Donut Emails** George Schnurle,2007-12-01 So how do you introduce a new employee at a high-tech venture-funded Silicon Valley startup? You have the Chief Donut Officer (CDO) send everyone a Donut Email! Here is an example for the new Director of HR: So what does our new Director of HR do? Let's give an example from another large organization. In Lord of the Rings, Sauron is the Chief Bad Guy, and he controls a vast army of Orcs, Goblins, and Flying Ringwraiths. How do you keep all these employees happy and productive? You have a Director of In-Human Resources who understands both their needs and also the regulatory environment of Middle Earth. What are the issues of harassment and grievances and on-the-job accidents with spears and battle-axes? The CDO brought Donuts and composed Donut emails nearly every Friday for four years. During that time, Data Domain developed a nifty product, hired a bunch of great people, grew to over \$100M in annual sales, and went public. Never underestimate what people will do for a really good Donut.

**Software and Systems Traceability** Jane Huang,Orlena Gotel,Andrea Zisman,2012-02-02 Software and Systems Traceability provides a comprehensive description of the practices and theories of software traceability across all phases of the software development lifecycle. The term

software traceability is derived from the concept of requirements traceability. Requirements traceability is the ability to track a requirement all the way from its origins to the downstream work products that implement that requirement in a software system. Software traceability is defined as the ability to relate the various types of software artefacts created during the development of software systems. Traceability relations can improve the quality of a product being developed, and reduce the time and cost of development. More specifically, traceability relations can support evolution of software systems, reuse of parts of a system by comparing components of new and existing systems, validation that a system meets its requirements, understanding of the rationale for certain design and implementation decisions, and analysis of the implications of changes in the system.
